

HP/Microsoft eLearning Learning Solutions

HP Education Services

Large organizations today want training that is available 24/7, with virtual labs and the best of contemporary learning tools. They want their users to consume as little or as much content as is needed at any given time. At HP we create solutions with our customer's needs in mind — training that does just that.

Microsoft eLearning from HP

Microsoft eLearning from HP gives this flexibility and more. It was created using content from Microsoft experts. Labs and content are available 24x7, giving your employees the flexibility to learn at their own pace, and at a time that is convenient and productive for them.

But eLearning alone will not enable your employee or organization to fully realize the value of your IT investment. To get the most return and stretch your training, HP recommends a Blended Learning Solution. Blending Learning combines eLearning with components such as Remotely Assisted Instructional Learning (RAIL), which combines the best of traditional classroom training with the best of online training; as

well as traditional face-to-face instructor-led training, individual mentors for best-in-class tutoring, 24/7 access to HP's Virtual Labs, Microsoft Official Courseware (MOC), practice tests and more to create a comprehensive Learning Solution. No matter what your training need is, HP can help.

Microsoft eLearning from HP is:

- **Flexible:** Not only can you access online training 24/7, but you can consume as little or as much content as you need at any given time.
- **Affordable and cost-effective:** You can choose live instructor-led training, or lower-cost web training, depending on your needs.
- **Productive:** With HP training, you can quickly see the return on your software and training investment without sacrificing productivity or time away from the office.
- **High quality:** HP's eLearning programs were developed by leading Microsoft technology experts using the latest Microsoft technologies, including upcoming releases.

Our solution = your needs

Our process is simple. We will start by assessing your employees' needs and how a customized Learning Solution will best work in your organization. Then we will develop a learning plan that integrates easily with your existing Learning Management System, or HP can build one for you.

So, what are your goals? Do you need to train thousands of employees for a worldwide technology rollout? Or are the targeted learners a small team of IT professionals? Either way, HP has the tools and expertise to deliver what your organization needs.

HP blends carefully selected training components into a flexible, end-to-end learning solution. It can include any or all of the components mentioned above. With HP's extensive network of facilities and tools, we can tailor the learning solutions to your needs.

- HP Virtual Rooms — where more than 45,000 student hours of Microsoft training have been delivered — enable you to hold online training sessions, seminars and offer on-demand play back of recorded content.
- Our Learning Management Systems enable you to register, track, deliver and measure your training programs, for your people, your way.
- Our SharePoint Learning Portal allows you to offer a single access page for learning. Pages can be customized to offer step-by-step learning tracks, communicate announcements, host documents or request practice test or exam vouchers.
- Our Project Management capability will enable you to oversee delivery, communication and change management. And HP can integrate this with your existing Learning Management System.

Why HP for Microsoft training?

HP is a worldwide Microsoft Gold Certified partner for Learning Solutions, with the largest number of Microsoft-certified professionals. With more than 30 years of experience in IT training, we can manage global rollouts and training projects for groups from 100 to 100,000 users worldwide.

We offer global Microsoft training solutions that support and accelerate deployment of new technologies or processes. Our Microsoft learning curricula enable you and your employees to master new technology quickly, while reducing the risk as you grow your business.

Among the Microsoft learning tracks that we have offered, four of the most common are: SQL Server, MCSD .NET, Windows Server, and Windows XP Desktop Support. With access to the best contemporary learning tools, HP is ready to support your organization in project management, solution creation, learning reports and information transfer. Examples of solutions we have delivered in these areas can be found at <http://education.hp.com/msbl.htm>.

The advantages of an integrated Microsoft Learning Solution are numerous:

- Accelerate user acceptance of the new environment
- Reduce time, cost, and risk of implementation
- Increase user productivity and effectiveness in less time
- Retain and increase your human capital and corporate knowledge by ongoing education activities
- Shorten time-to-market by increasing employee productivity
- Maximize savings while ensuring consistency of training through centralized training activities and processes
- Realize and take advantage of your organization's Software Assurance Subscription
- Optimize training results through continued evaluation and adjustments.
