TECHNOLOGY SPOTLIGHT
HP PROFESSIONAL INNOVATIONS FOR BUSINESS NOTEBOOKS

WHY WAIT MINUTES TO GET ONLINE WHEN YOU CAN GET THERE IN SECONDS?

When you're traveling at the speed of business, every minute counts. For many business professionals, valuable time is lost waiting for the notebook to boot up just to access the web. Over the course of a single week, the few minutes it takes to power on the notebook and connect to the Internet can potentially add up to an entire hour of lost productivity.

At HP, we understand that your time is a precious commodity—that's why we've developed a solution to help give you more of it. HP

QuickWeb is an innovative bit of technology that lets you access the web in seconds, even when your notebook is shut down. Because HP

QuickWeb resides outside your notebook's operating system, there's no need to wait minutes for your system to boot. Simply push the HP QuickWeb button on your HP Business Notebook PC, and in less than 20 seconds¹ you'll have a fast connection to the Internet and access to websites and content you normally would through your regular browser. Shutting down your notebook is just as easy: either press the power button, or simply close the application—and your notebook powers off in as little as five seconds. It's the speed, convenience and security your busy work style demands.

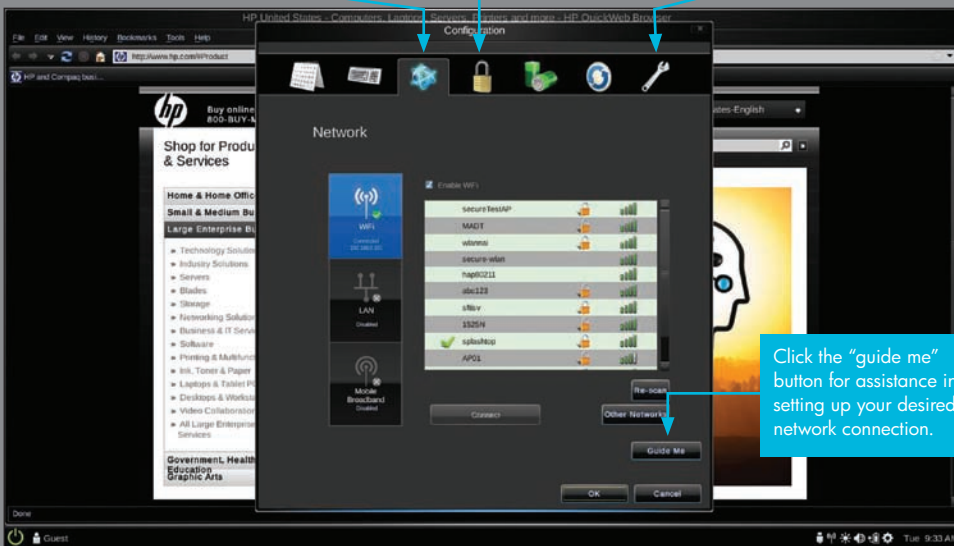

HP QuickWeb button

Configure your network connection.

Choose from two security modes: normal and write-protected.

Recover to factory default state.

Click the "guide me" button for assistance in setting up your desired network connection.

GET CONNECTED IN MORE PLACES—QUICKLY.

Because you need the ability to connect in a wide variety of locations, HP QuickWeb offers support for LAN and wireless LAN/WAN environments right out of the box. When you first launch HP QuickWeb,¹ you can choose your network connection type—Wi-Fi, LAN or mobile broadband—from the network configuration page. You can even set up multiple connection types. If you're on the road and need to connect using a different network type, simply click the network icon in the top toolbar to bring up a list of available networks, then select the one you want. It's that easy.

In addition to providing fast access to the Internet from a power-off state, HP QuickWeb is a fully functioning web browser that lets you:

- View and play multimedia files in today's most common formats (Adobe Flash, Java™, MP3).
- View content with Adobe® Reader.
- Retain offline content such as connection settings, cookies, plug-ins, favorites and homepage.
- Download and save files and content to an external USB drive.

HOW CAN HP QUICKWEB HELP SAVE TIME AND SIMPLIFY YOUR LIFE?

FIND THE INFORMATION YOU NEED TO MEET A TIGHT DEADLINE.

Time is scarce, but you've managed to carve out a few minutes for a latte in your favorite coffee house before your next customer appointment. As you reach the counter, you suddenly realize that you forgot to print out a report of recent sales to this customer back at the office. After ordering your latte, you tap the HP QuickWeb button on your notebook, and easily navigate and log in to your online CRM website. Before the barista has even steamed the milk for your coffee, you've got the latest sales numbers right in front of you, and make your appointment prepared with the right information.

SECURITY SETTINGS

To protect your valuable (and often times irreplaceable) business and personal information, HP QuickWeb comes with a number of security settings designed to let you browse the web with confidence. First and foremost are the software's two security modes, normal (default) and write-protected. In normal mode, some security restrictions are enabled, but you can still save settings such as brightness, volume and network connections, as well as create bookmarks, view your browsing history and save files to an external USB drive. In situations where security is of high concern, the write-protected mode prevents any content from being written or saved, including your HP QuickWeb settings—all activity is discarded at the end of your session. This is especially handy when visiting untrusted sites or when a guest will be using your notebook.

In addition to these security modes, HP QuickWeb also offers the option to restore the software to a previous state. The "restore to factory default" option removes all user data and global data, and restores HP QuickWeb to its original state. Similarly, the "remove all user data" option leaves global data intact but removes user data such as cookies, bookmarks, homepage settings and search history. HP QuickWeb exists separately from your Windows® environment, and data downloaded does not affect that environment in any way.

PAY YOUR BILLS AND CONDUCT BANKING ONLINE—WITH CONFIDENCE.

While on a holiday weekend getaway, you suddenly realize that you forgot to mail in your mortgage payment. You can make the payment online, but are hesitant to do so because of potential security threats to online transactions.

Then you remember—HP QuickWeb can run in an elevated write-protected security mode, which does not allow any downloads and is designed to protect against such online attacks. With write-protected security enabled, you quickly access your account and confidently make the payment online.

CONNECT QUICKLY AND STAY PRODUCTIVE WITH HP QUICKWEB.

- Access the web in seconds, even when your notebook is turned off.¹
- Spend less time waiting for your notebook to boot up, and more time being productive.
- Stay mobile with multiple connectivity options—HP QuickWeb offers out-of-the-box support for LAN and wireless LAN/WAN environments.¹
- Easily customize and change your personal settings to meet your browsing requirements and preferences.
- View and play multimedia files in today's most common formats, including Adobe Flash, Adobe Reader, MP3 and more.
- Browse with confidence—enhanced security features help protect sensitive information and prevent malicious downloads.

GET ONLINE IN SECONDS, NOT MINUTES.

HP QuickWeb is an innovative software solution that sits outside your computer's operating system, enabling you to access the web without having to boot into Windows. With a single touch of a button, you can enjoy a fast connection to the Internet in under 20 seconds¹ from a power-off state. Included with select HP Business Notebook PCs, HP QuickWeb is the ideal solution for users whose highly mobile lifestyle demands fast, no-wait access to critical information online.

To learn more, visit www.hp.com/go/professionalinnovations.

¹ HP QuickWeb is accessible when the notebook is off in Windows XP, Windows Vista® or Windows 7-based systems; not supported from hibernation. Internet access required. Timing may vary depending on the system configuration. To enable the feature following the removal of the battery, reboot the notebook prior to subsequent use. Not available on HP ProBook s-series or HP Minis.
