# Allied Telesis

# x310 Series

# Stackable Access Switches

The Allied Telesis x310 Series Layer 3 stackable access switches offer an impressive set of features in a high-value package, ideal for applications at the network edge.

# Overview

1001001010010

The Allied Telesis x310 Series provide a high performing and scalable access solution for today's networks. With a choice of 24-port and 48-port 10/100BASE-T versions with Gigabit uplinks, Power over Ethernet (PoE), plus the ability to stack up to four units, the x310 Series is perfect for demanding applications at the edge of enterprise networks.

# Manageable

The x310 runs the advanced AlliedWare Plus<sup>™</sup> fully featured Operating System delivering a rich feature set and an industry-standard Command Line Interface (CLI). The industry-standard CLI reduces training requirements and is consistent across all AlliedWare Plus devices, simplifying network management.

The built-in, web-based Graphical User Interface (GUI) is an easy-to-use and powerful management tool. With comprehensive monitoring facilities and the ability to view a virtual chassis as a single entity, the GUI is an essential part of network management.

## Powerful network management

Meeting the increased management requirements of modern converged networks, Allied Telesis Autonomous Management Framework (AMF) automates everyday tasks including configuration management. The complete network can be managed as a single virtual device with powerful centralized management features. Growing the network can be accomplished with plug-and-play simplicity, and network node recovery is fully zero-touch.

AMF secure mode increases network security with management traffic encryption, authorization, and monitoring.

# Reliable

The x310 was designed with reliability in mind, to guarantee the continued delivery of essential services. With the ability to stack up to four devices, maintenance and reconfiguration do not affect network uptime.

#### Secure

Advanced security features protect the network from the edge to the core. Unprecedented control over user access is provided with Network Access Control (NAC), to mitigate threats to network infrastructure. This ensures the network is accessed only by known users and devices, as each user's adherence to network security policies is checked.Secure access can also be provided for guests.

A secure network environment is guaranteed, with powerful control over network traffic types, secure management options, and other multilayered security features built right into the x310 Series switches.

# Future-proof

A future-proof network is ensured with the flexibility of the x310 Series, coupled with the ability to stack multiple units. All x310 models come with a comprehensive IPv6 feature set as standard, to ensure they are ready for future traffic demands.

x310 Series switches are Software Definided Networking (SDN) ready and are able to support OpenFlow v1.3.

# ECO friendly

The x310 supports Energy Efficient Ethernet (EEE), which automatically reduces the power consumed by the

switch whenever there is no traffic on a port. This sophisticated feature can

significantly reduce your operating costs, by reducing the power requirements of the switch and any associated cooling equipment.

# **New Features**

- AMF secure mode
- Active Fiber Monitoring
- OpenFlow for SDN
- VLAN Mirroring (RSPAN)
- VLAN ACLs
- ► G.8032 Ethernet Ring Protection
- Ethernet CFM

**EPSR**ing

# **Key Features**

# Virtual Chassis Stacking (VCStack™)

Create a VCStack of up to four units with 4 Gbps of stacking bandwidth to each unit. Stacking links are connected in a ring so each device has dual connections to further improve resiliency. VCStack provides a highly available system where network resources are spread out across stacked units, reducing the impact if one of the units fails. Aggregating switch ports on different units across the stack provides excellent network resiliency.

#### Allied Telesis Autonomous Management Framework (AMF)

- Allied Telesis Autonomous Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Common tasks are automated or made so simple that the every-day running of a network can be achieved without the need for highly-trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, autoupgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.
- AMF secure mode encrypts all AMF traffic, provides unit and user authorization, and monitors network access to greatly enhance network security.

# Ethernet Protection Switching Rings (EPSRing)

EPSRing allows several x310 switches to form a protected ring capable of recovery within as little as 50ms. This feature is perfect for high performance and high availability in enterprise networks.

#### **G.8032 Ethernet Ring Protection**

- G.8032 provides standards-based high-speed ring protection, that can be deployed stand-alone, or interoperate with Allied Telesis EPSR.
- Ethernet Connectivity Fault Monitoring (CFM) proactively monitors links and VLANs, and provides alerts when a fault is detected.

# Industry-leading Quality of Service (QoS)

Comprehensive low-latency wire-speed QoS provides flow-based traffic management with full classification, prioritization, traffic shaping and min/ max bandwidth profiles. Enjoy boosted network performance and guaranteed delivery of businesscritical Ethernet services and applications.

#### Loop protection

- Thrash limiting, also known as rapid MAC movement, detects and resolves network loops. It is highly user-configurable - from the rate of looping traffic to the type of action the switch should take when it detects a loop.
- With thrash limiting, the switch only detects a loop when a storm has occurred, which can potentially cause disruption to the network. To avoid this, loop detection works in conjunction with thrash limiting to send special packets that the switch listens for. If a port receives a special packet, you can choose to disable the port, disable the link, or send an SNMP trap.

#### Power over Ethernet Plus (PoE+)

With PoE, a separate power connection to media endpoints such as IP phones and wireless access points is not necessary. PoE+ reduces costs and provides even greater flexibility, providing the capability to connect devices requiring more power (up to 30 Watts)—for example pan, tilt and zoom (PTZ) security cameras.

#### Link Layer Discovery Protocol – Media Endpoint Discovery (LLDP – MED)

LLDP-MED extends LLDP basic network endpoint discovery and management functions. LLDP-MED allows for media endpoint specific messages, providing detailed information on power requirements, network policy, location discovery (for Emergency Call Services) and inventory.

#### Voice VLAN

Voice VLAN automatically separates voice and data traffic into two different VLANs. This automatic separation places delay-sensitive traffic into a voice dedicated VLAN, which simplifies QoS configurations.

#### sFlow

SFlow is an industry standard technology for monitoring high speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure it always has a real-time view of network traffic.

#### **Active Fiber Monitoring**

 Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received

optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

#### **UniDirectional Link Detection**

UniDirectional Link Detection (UDLD) is useful for monitoring fiber-optic links between two switches that use two single-direction fibers to transmit and receive packets. UDLD prevents traffic from being sent across a bad link by blocking the ports at both ends of the link in the event that either the individual transmitter or receiver for that connection fails.

#### **Tri-authentication**

Authentication options on the x310 Series also include alternatives to 802.1x port-based authentication, such as web authentication to enable guest access and MAC authentication for end points that do not have an 802.1x supplicant. All three authentication methods—802.1x, MAC-based and Web-based—can be enabled simultaneously on the same port. This is called tri-authentication.

#### **TACACS+** Command Authorization

Centralize control of which commands may be issued by a specific user of an AlliedWare Plus device. TACACS+ command authorization complements authentication and accounting services for a complete AAA solution.

#### Access Control Lists (ACLs)

AlliedWare Plus delivers industry-standard Access Control functionality through ACLs. ACLs filter network traffic to control whether routed packets are forwarded or blocked at the port interface. This provides a powerful network security mechanism to select the types of traffic to be analyzed, forwarded, or influenced in some way.

#### VLAN ACLs

Simplify access and traffic control across entire segments of the network. Access Control Lists (ACLs) can be applied to a Virtual LAN (VLAN) as well as a specific port.

#### **Premium Software License**

By default, the x310 Series offers a comprehensive Layer 2 and basic Layer 3 feature set that includes static routing and IPv6 management features. The feature set can easily be elevated to full Layer 3 by applying the premium software license. This adds dynamic routing protocols and Layer 3 multicasting capabilities.

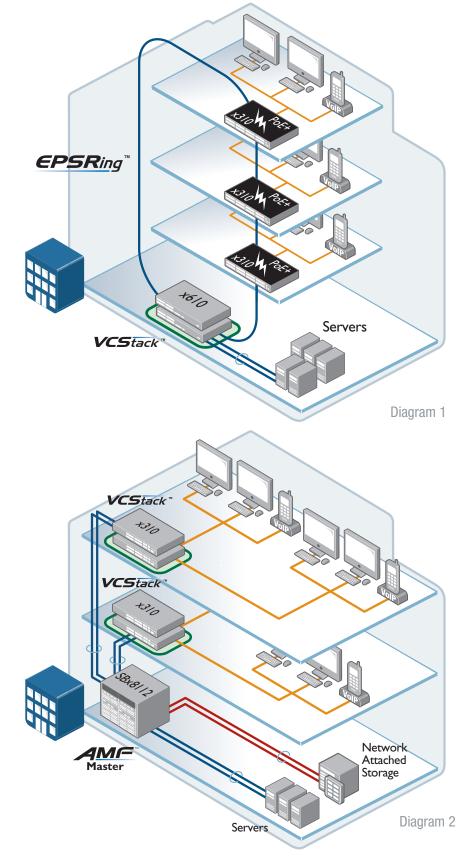

#### VLAN Mirroring (RSPAN)

VLAN mirroring allows traffic from a port on a remote switch to be analysed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

# **Key Solutions**

## Network convergence

The convergence of network services in the Enterprise has led to increasing demand for highly available networks with minimal downtime. Diagram 1 shows x310 PoE+ switches with high performance EPSRing connectivity to the x610 VCStack network core. This topology provides recovery in as little as 50ms, if required. PoE+ powers end points without the need for separate power feeds.

#### **Network flexibility**

Multiple x310 units can form a single virtual unit with VCStack, as shown in Diagram 2. This greatly simplifies management and provides a scalable and future-proof network. Management of the network is simple, since all SwitchBlade and x-series switches run the advanced AlliedWare Plus operating system, with an industry standard CLI.

# **Product Specifications**

PRODUCT	10/100BASE-T (RJ-45) COPPER PORTS	100/1000 COMBO UPLINK PORTS	1 GIGABIT Stacking Ports	POE CAPABLE PORTS	SWITCHING CAPACITY	FORWARDING RATE
x310-26FT	24	2	2	-	12.8 Gbps	9.5 Mpps
x310-50FT	48	2	2	-	17.6 Gbps	13.1 Mpps
x310-26FP	24	2	2	24	12.8 Gbps	9.5 Mpps
x310-50FP	48	2	2	48	17.6 Gbps	13.1 Mpps

#### Performance

- 4 Gbps of stacking bandwidth
- Supports 12KB Jumbo frames
- Wirespeed multicasting
- Up to 16K MAC addresses
- ▶ 512MB DDR SDRAM
- ▶ 64MB flash memory
- Packet Buffer memory: x310-26 1.5MB x310-50 - 3MB

#### Reliability

- Modular AlliedWare Plus operating system
- Full environmental monitoring of PSU, fans, temperature and internal voltages. SNMP traps alert network managers in case of any failure

#### Power Characteristics

- ► AC Voltage: 90 to 260V (auto-ranging)
- Frequency: 47 to 63Hz

#### Expandability

Stackable up to four units in a VCStack

#### Flexibility and compatibility

- Gigabit SFP ports on x310 Series will support any combination of Allied Telesis 100Mbps and 1000Mbps SFP modules listed in this document under Ordering Information
- Port speed and duplex configuration can be set manually or by auto-negotiation

#### **Diagnostic Tools**

- Active Fiber Monitoring detects tampering on optical links
- Built-In Self Test (BIST)
- Cable fault locator (TDR)
- UniDirectional Link Detection (UDLD)
- Find-me device locator
- Automatic link flap detection and port shutdown
- Optical Digital Diagnostic Monitoring (DDM)
- Ping polling for IPv4 and IPv6
- Port and VLAN mirroring (RSPAN)
- TraceRoute for IPv4 and IPv6

#### **IPv4** Features

- Black hole routing
   Directed broadcast forwarding
- DNS relav
- Equal Cost Multi Path (ECMP) routing
- Route redistribution (OSPF, RIP)
- Static unicast and multicast routes for IPv4
- ► UDP broadcast helper (IP helper)

#### IPv6 Features

4 | x310 Series

- DHCPv6 client and relay
- IPv4 and IPv6 dual stack

- IPv6 hardware ACLs and QoS
- Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
- NTPv6 client and server
- Static unicast and multicast routes for IPv6

#### Management

- Front panel 7-segment LED provides at-a-glance status and fault information
- Allied Telesis Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery
- Console management port on the front panel for ease of access
- Eco-friendly mode allows ports and LEDs to be disabled to save power
- Web-based Graphical User Interface (GUI)
- Industry-standard CLI with context-sensitive help
- Powerful CLI scripting engine
- Comprehensive SNMP MIB support for standardsbased device management
- Built-in text editor
- Event-based triggers allow user-defined scripts to be executed upon selected system events
- USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices

#### Quality of Service (QoS)

- 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- Limit bandwidth per port or per traffic class down to 64kbps
- Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
- Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- Policy-based storm protection
- Extensive remarking capabilities
- ► Taildrop for queue congestion control
- Strict priority, weighted round robin or mixed scheduling
- IP precedence and DiffServ marking based on layer 2, 3 and 4 headers

#### Resiliency

- Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- Dynamic link failover (host attach)
- Ethernet Protection Switched Rings (EPSR) with SuperLoop Protection (SLP) and enhanced recovery for extra resiliency
- ► Loop protection: loop detection and thrash limiting
- PVST+ compatibility mode

- STP root guard
- VCStack fast failover minimizes network disruption

#### Security

- Access Control Lists (ACLs) for IPv4 and IPv6 based on layer 3 and 4 headers, per VLAN or port
- Configurable ACLs for management traffic
- Auth-fail and guest VLANs
- Authentication, Authorisation and Accounting (AAA)
- Bootloader can be password protected for device security
- BPDU protection
- DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- DoS attack blocking and virus throttling
- Dynamic VLAN assignment
- MAC address filtering and MAC address lock-down
- Network Access and Control (NAC) features manage endpoint security
- Port-based learn limits (intrusion detection)
- Private VLANs provide security and port isolation for multiple customers using the same VLAN
- Secure Copy (SCP)
- Strong password security and encryption
- ► Tri-authentication: MAC-based, web-based and IEEE 802.1x
- ▶ RADIUS group selection per VLAN or port

#### **Environmental specifications**

- Operating Temperature Range: 0°C to 40°C (32°F to 104°F) for AT-x310-26FT (fanless)
  - 0°C to 50°C (32°F to 122°F) for AT-x310-26FP/50FP/50FT
- Derated by 1°C per 305 meters (1,000 ft)
- Storage Temperature Range: -25°C to 70°C (-13°F to 158°F)
   Operating Relative Humidity Range:

5% to 90% non-condensing

5% to 95% non-condensing

Operating Altitude:

Safety

60950.1

Certification: UL, cUL

Storage Relative Humidity Range:

3,048 meters maximum (10,000 ft)

Immunity: EN55024, EN61000-3-levels 2

**Electrical approvals and compliances** 

(Harmonics), and 3 (Flicker) - AC models only

Standards: UL60950-1, CAN/CSA-C22.2 No.

60950-1-03, EN60950-1, EN60825-1, AS/NZS

alliedtelesis.com

EMC: EN55022 class A, FCC class A, VCCI class A

# Ordering Information Feature Licenses

NAME	DESCRIPTION	INCLUDES	STACK LICENSING
AT-FL-x310-01	x310 premium license	<ul> <li>RIP (256 routes)</li> <li>OSPF (256 routes)</li> <li>PIMv4-SM, DM and SSM</li> <li>EPSR master</li> <li>RIPng (256 routes)</li> <li>OSPFv3 (256 routes)</li> <li>PIMv6-SM and SSM</li> <li>VRRP</li> <li>UDLD</li> </ul>	<ul> <li>One license per stack member</li> </ul>
AT-FL-x310-0F13-1YR	OpenFlow license	► OpenFlow v1.3 for 1 year	Not supported on a stack
AT-FL-x310-0F13-5YR	OpenFlow license	OpenFlow v1.3 for 5 years	Not supported on a stack
AT-FL-x310-8032	ITU-T G.8032 license	<ul><li>G.8032 ring protection</li><li>Ethernet CFM</li></ul>	<ul> <li>One license per stack member</li> </ul>

#### RFC 4252 Secure Shell (SSHv2) authentication protocol RFC 4253 Secure Shell (SSHv2) transport layer protocol Secure Shell (SSHv2) connection protocol RFC 4254 RFC 5246 Transport Layer Security (TLS) v1.2 X.509 certificate and Certificate Revocation RFC 5280 List (CRL) profile RFC 5425 Transport Layer Security (TLS) transport mapping for Syslog RFC 5656 Elliptic curve algorithm integration for SSH RFC 6125 Domain-based application service identity within PKI using X.509 certificates with TLS RFC 6614 Transport Layer Security (TLS) encryption for RADIUS RFC 6668 SHA-2 data integrity verification for SSH Services RFC 854 Telnet protocol specification RFC 855 Telnet option specifications RFC 857 Telnet echo option RFC 858 Telnet suppress go ahead option RFC 1091 Telnet terminal-type option RFC 1350 Trivial File Transfer Protocol (TFTP) RFC 1985 SMTP service extension RF

RFC 3748 PPP Extensible Authentication Protocol (EAP)

Secure Shell (SSHv2) protocol architecture

RFC 4251

RFC 2049	MIME
RFC 2131	DHCPv4 (server, relay and client)
RFC 2132	DHCP options and BootP vendor extensions
RFC 2616	Hypertext Transfer Protocol - HTTP/1.1
RFC 2821	Simple Mail Transfer Protocol (SMTP)
RFC 2822	Internet message format
RFC 3046	DHCP relay agent information option (DHCP
	option 82)
RFC 3315	DHCPv6 client
RFC 3993	Subscriber-ID suboption for DHCP relay agent
	option
RFC 4330	Simple Network Time Protocol (SNTP)
	version 4
RFC 5905	Network Time Protocol (NTP) version 4

#### VLAN Support

IEEE 802.1Q Virtual LAN (VLAN) bridges IEEE 802.1v VLAN classification by protocol and port IEEE 802.3acVLAN tagging

#### Voice over IP (VoIP)

LLDP-MED ANSI/TIA-1057 Voice VLAN

## x310 Series | Stackable Access Switches

Switches

#### AT-x310-26FT-xx

24-port 10/100BASE-T switch with 2 combo ports (100/1000X SFP or 10/100/1000T) and 2 stacking ports

#### AT-x310-50FT-xx

48-port 10/100BASE-T switch with 2 combo ports (100/1000X SFP or 10/100/1000T) and 2 stacking ports

#### AT-x310-26FP-xx

24-port 10/100BASE-T PoE+ switch with 2 combo ports (100/1000X SFP or 10/100/1000T) and 2 stacking ports

#### AT-x310-50FP-xx

48-port 10/100BASE-T PoE+ switch with 2 combo ports (100/1000X SFP or 10/100/1000T) and 2 stacking ports

Where xx = 10 for US power cord

20 for no power cord 30 for UK power cord 40 for Australian power cord 50 for European power cord

#### SFP modules

AT-SPFX/2 100FX multi-mode 1310nm fiber up to 2km

AT-SPFX/15 100FX single-mode 1310nm fiber up to 15km

AT-SPFXBD-LC-13 100BX Bi-Di (1310nmTx,1550nm Rx) fiber up to 10km

#### AT-SPFXBD-LC-15

100BX Bi-Di (1550nm Tx,1310nm Rx) fiber up to 10km

AT-SPSX 1000SX GbE multi-mode 850nm fiber up to 550m

#### AT-SPSX/I

1000SX GbE multi-mode 850nm fiber up to 550m industrial temperature

AT-SPEX 1000X GbE multi-mode 1310nm fiber up to 2km

AT-SPLX10 1000LX GbE single-mode 1310nm fiber up to 10km

AT-SPLXIO/I 1000LX GbE single-mode 1310nm fiber up to 10km industrial temperature

#### AT-SPBDI0-13

1000LX GbE Bi-Di (1310nm Tx, 1490nm Rx) fiber up to 10km

#### AT-SPBDI0-14

1000LX GbE Bi-Di (1490nm Tx, 1310nm Rx) fiber up to 10km

AT-SPLX40

1000LX GbE single-mode 1310nm fiber up to 40km

#### AT-SPZX80 1000ZX GbE single-mode 1550nm fiber up to

80km

AT-SPBD20-13/I

1000BX GbE Bi-Di (1310 nm Tx, 1550 nm Rx) fiber up to 20 km  $\,$ 

#### AT-SPBD20-14/I

1000BX GbE Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 20 km

AT-SP10TW1 1 meter SFP direct attach cable

AT-SP10TW3 3 meter SFP direct attach cable

#### AT-SP10TW7

7 meter SFP direct attach cable

(Note that any Allied Telesis direct attach cable can also be used for stacking)
