

R-Go Split Ergonomic Keyboard, QWERTY(UK), black, wired

R-Go Tools introduces the R-Go Split ergonomic keyboard. This keyboard contains all the ergonomic features to type healthy. The very compact design ensures that the hands remain within shoulder width with simultaneous use of keyboard and mouse. This avoids reaching with the arm and ensures that the shoulder and elbow remain in a natural, relaxed position.

This keyboard consists of two separate parts, whereby each part of the keyboard can be used in a straight line with the lower arms. This ensures a natural, relaxed position. The two parts can be placed in any desired position, such as a standard split keyboard. The light keystroke ensures minimal muscle tension is present during typing. The very thin design provides a relaxed, flat position of hands and wrists while typing.
