

# TRX40 AORUS PRO WIFI

## User's Manual

Rev. 1001

12ME-TR4APRW-1001R

For more product details, please visit GIGABYTE's website.

To reduce the impacts on global warming, the packaging materials of this product are recyclable and reusable. GIGABYTE works with you to protect the environment.

**Declaration of Conformity**

We, Manufacturer/Importer,

G.B.T. Technology Trading GmbH

Address: **Bullenkoppel 16, 22047 Hamburg, Germany**

Declare that the product

Product Type: **Motherboard**

Product Name: **TRX40 AORUS PRO WIFI**

conforms with the essential requirements of the following directives:

**EMC Directive 2014/30/EU:**

- Conduction & Radiated Emissions: EN 55032:2012+AC2013
- Immunity: EN 55024:2010+A1:2015
- Power-line harmonics: EN 61000-3-2:2014
- Power-line flicker: EN 61000-3-3:2013

**Low Voltage Directive (LVD) 2014/35/EU:**

- Safety: EN 62368-1:2014  
EN 50566:2017

**Radio Equipment Directive (RED) 2014/53/EU:**

- Wireless module model name: AX200NGW
- Wireless module manufacturer: Intel Mobile Communications SAS
- Technical Requirements: EN 300 328 v2.1.1,  
EN 301893 v2.1.1, EN 300 400 v2.2.1  
EN 301 489-1 v2.2.0, EN 301 489-17 v3.2.0.

**RoHS Directive 2011/65/EU**

- Restriction of use of certain substances in electronic equipment: This product does not contain any of the restricted substances listed in Annex II, in concentrations and applications banned by the directive.

**CE marking**

Signature: Timmy Huang

(date)

Date: Oct. 25, 2019

Name:

Timmy Huang

**DECLARATION OF CONFORMITY**

Per FCC Part 2 Section 2.1077(a)

**Responsible Party Name: G.B.T. INC. (U.S.A.)**

**Address: 17358 Railroad Street**

**City of Industry, CA 91748**

**Phone/Fax No: (626) 854-9338/ (626) 854-9326**

hereby declares that the product

**Product Name: Motherboard**

**Model Number: TRX40 AORUS PRO WIFI**

Conforms to the following specifications:

FCC Part 15, Subpart B, Section 15.107(a) and Section 15.109 (a), Class B Digital Device

**Supplementary Information:**

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful and (2) this device must accept any interference received, including that may cause undesired operation.

Representative Person's Name: ERIC LU

Signature: Eric Lu

Date: Oct. 25, 2019

Changes to the specifications and features in this manual may be made by GIGABYTE without prior notice.

No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without GIGABYTE's prior written permission.

- For quick set-up of the product, read the Quick Installation Guide included with the product.
- In order to assist in the use of this product, carefully read the User's Manual.
- For product-related information, check on our website at: <https://www.gigabyte.com>

## **Identifying Your Motherboard Revision**

The revision number on your motherboard looks like this: "REV: X.X." For example, "REV: 1.0" means the revision of the motherboard is 1.0. Check your motherboard revision before updating motherboard BIOS, drivers, or when looking for technical information.

Example:

# TRX40 AORUS PRO WIFI Motherboard Layout

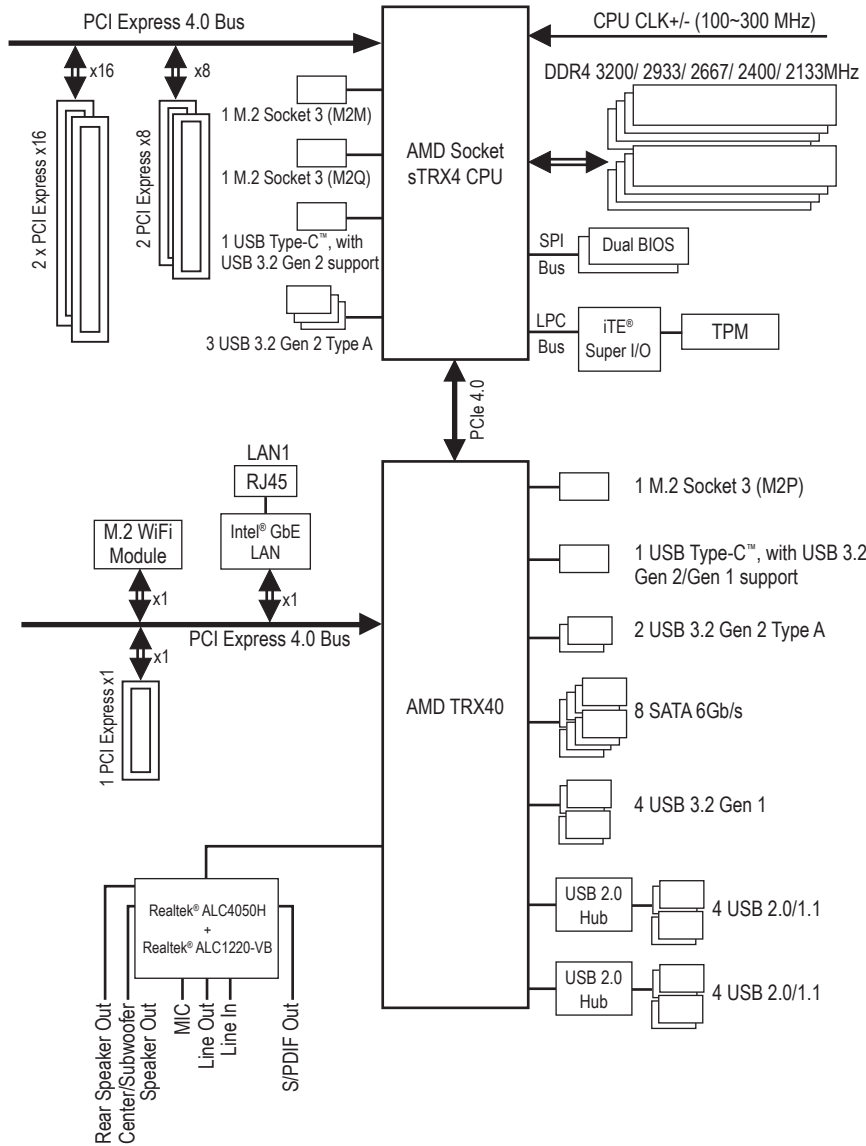

## Box Contents

- TRX40 AORUS PRO WIFI motherboard
- Motherboard driver disc
- User's Manual
- Quick Installation Guide
- One RGB LED strip extension cable
- One addressable LED strip adapter cable
- Four SATA cables
- One antenna
- M.2 screw(s)/M.2 standoff(s)
- One G Connector
- One thermistor cable

\* The box contents above are for reference only and the actual items shall depend on the product package you obtain. The box contents are subject to change without notice.

# Chapter 1 Hardware Installation

## 1-1 Installation Precautions

The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the user's manual and follow these procedures:

- Prior to installation, make sure the chassis is suitable for the motherboard.
- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before connecting or unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature or wet environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.
- If you use an adapter, extension power cable, or power strip, ensure to consult with its installation and/or grounding instructions.

## 1-2 Product Specifications

\* GIGABYTE reserves the right to make any changes to the product specifications and product-related information without prior notice.

Please visit GIGABYTE's website for support lists of CPU, memory modules, SSDs, and M.2 devices.

Please visit the **SupportUtility List** page on GIGABYTE's website to download the latest version of apps.

### 1-3 Installing the CPU

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.  
(Go to GIGABYTE's website for the latest CPU support list.)
- Prepare a T20 star screwdriver.
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Apply an even and thin layer of thermal grease on the surface of the CPU.
- Do not turn on the computer if the CPU cooler is not installed, otherwise overheating and damage of the CPU may occur.
- Set the CPU host frequency in accordance with the CPU specifications. It is not recommended that the system bus frequency be set beyond hardware specifications since it does not meet the standard requirements for the peripherals. If you wish to set the frequency beyond the standard specifications, please do so according to your hardware specifications including the CPU, graphics card, memory, hard drive, etc.

#### Installing the CPU

The CPU carrier frame must be slid into the CPU rail frame with the CPU. Do not remove the CPU from the CPU carrier frame.

## 1-4 Installing the Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used. (Go to GIGABYTE's website for the latest supported memory speeds and memory modules.)
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

### Quad Channel Memory Configuration

This motherboard supports Quad Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory. The eight DDR4 memory sockets are divided into four channels and each channel has two memory sockets as following:

- ▶▶ Channel A: DDR4\_A1, DDR4\_A2
- ▶▶ Channel B: DDR4\_B1, DDR4\_B2
- ▶▶ Channel C: DDR4\_C1, DDR4\_C2
- ▶▶ Channel D: DDR4\_D1, DDR4\_D2

▶▶ Refer to the table below for memory installation according to the number of the memory modules you want to install:

|           | DDR4_D2 | DDR4_D1 | DDR4_C2 | DDR4_C1 | DDR4_A1 | DDR4_A2 | DDR4_B1 | DDR4_B2 |
|-----------|---------|---------|---------|---------|---------|---------|---------|---------|
| 1 Modules |         |         |         |         |         | ✓       |         |         |
| 2 Modules |         |         |         |         |         | ✓       |         | ✓       |
| 4 Modules | ✓       |         | ✓       |         |         | ✓       |         | ✓       |
| 6 Modules | ✓       | ✓       | ✓       |         |         | ✓       | ✓       | ✓       |
| 8 Modules | ✓       | ✓       | ✓       | ✓       | ✓       | ✓       | ✓       | ✓       |

✓ : Installed, Empty: Not Installed

For optimum performance, it is recommended that memory of the same capacity, brand, speed, and chips be used. When installing the memory, make sure to begin with the second socket of each channel, such as DDR4\_A2, DDR4\_B2, DDR4\_C2, DDR4\_D2.

## 1-5 Installing an Expansion Card

Read the following guidelines before you begin to install an expansion card:

- Make sure the motherboard supports the expansion card. Carefully read the manual that came with your expansion card.
- Always turn off the computer and unplug the power cord from the power outlet before installing an expansion card to prevent hardware damage.

Please visit GIGABYTE's website for details on hardware installation.

## 1-6 Setting up AMD CrossFire™/NVIDIA® SLI™ Configuration

### A. System Requirements

- Windows 10 64-bit operating system
- A CrossFire/SLI-supported motherboard with two or more PCI Express x16 slots and correct driver
- CrossFire/SLI-ready graphics cards of identical brand and chip and correct driver  
(For the latest GPUs that support the 3-way CrossFire/SLI technology, please refer to the AMD/NVIDIA® website.) <sup>(Note 1)</sup>
- CrossFire <sup>(Note 2)</sup>/SLI bridge connectors
- A power supply with sufficient power is recommended (Refer to the manual of your graphics cards for the power requirement)

### B. Connecting the Graphics Cards

Step 1:

Observe the steps in "1-5 Installing an Expansion Card" and install CrossFire/SLI graphics cards on the PCI Express x16 slots.

Step 2:

Insert the CrossFire <sup>(Note 2)</sup>/SLI bridge connectors in the CrossFire/SLI gold edge connectors on top of the cards.

Step 3:

Plug the display cable into the graphics card on the PCIEX16\_1 slot.

### C. Configuring the Graphics Card Driver

#### C-1. To Enable CrossFire Function

After installing the graphics card driver in the operating system, go to the **AMD RADEON SETTINGS** screen. Browse to **Gaming|Global Settings** and ensure **AMD CrossFire** is set to **On**.

#### C-2. To Enable SLI Function

After installing the graphics card driver in the operating system, go to the **NVIDIA Control Panel**. Browse to the **Configure SLI, Surround, Physx** screen and ensure **Maximize 3D performance** is enabled.

(Note 1) When using dual core graphics cards, only 2-way is supported.

(Note 2) The bridge connector(s) may be needed or not depending on your graphics cards.

Procedure and driver screen for enabling CrossFire/SLI technology may differ by graphics cards and driver version. Refer to the manual that came with your graphics cards for more information about enabling CrossFire/SLI technology.

## 1-7 Back Panel Connectors

### a USB 2.0/1.1 Port

The USB port supports the USB 2.0/1.1 specification. Use this port for USB devices.

### b USB 3.2 Gen 2 Type-A Port (Red)

The USB 3.2 Gen 2 Type-A port supports the USB 3.2 Gen 2 specification and is compatible to the USB 3.2 Gen 1 and USB 2.0 specification. Use this port for USB devices.

### c USB 3.2 Gen 2 Type-A Port (Q-Flash Plus Port)

The USB 3.2 Gen 2 Type-A port supports the USB 3.2 Gen 2 specification and is compatible to the USB 3.2 Gen 1 and USB 2.0 specification. Use this port for USB devices. Before using Q-Flash Plus <sup>(Note)</sup>, make sure to insert the USB flash drive into this port first.

### d Q-Flash Plus Button <sup>(Note)</sup>

This button allows you to update the BIOS when the power connector is connected but the system is not powered on.

### e USB Type-C™ Port

The reversible USB port supports the USB 3.2 Gen 2 specification and is compatible to the USB 3.2 Gen 1 and USB 2.0 specification. Use this port for USB devices.

### f RJ-45 LAN Port

The Gigabit Ethernet LAN port provides Internet connection at up to 1 Gbps data rate. The following describes the states of the LAN port LEDs.

Connection/Speed LED:

| State  | Description        |
|--------|--------------------|
| Orange | 1 Gbps data rate   |
| Green  | 100 Mbps data rate |
| Off    | 10 Mbps data rate  |

Activity LED:

| State    | Description                                    |
|----------|--|
| Blinking | Data transmission or receiving is occurring    |
| On       | No data transmission or receiving is occurring |

### g SMA Antenna Connectors (2T2R)

Use this connector to connect an antenna.

Tighten the antenna cables to the antenna connectors and then move the antenna to a place where the signal is good.

(Note) To enable the Q-Flash Plus function please visit the "Unique Features" webpage of GIGABYTE's website.

- When removing the cable connected to a back panel connector, first remove the cable from your device and then remove it from the motherboard.
- When removing the cable, pull it straight out from the connector. Do not rock it side to side to prevent an electrical short inside the cable connector.

**⑥ Center/Subwoofer Speaker Out**

Use this audio jack to connect center/subwoofer speakers.

**⑦ Rear Speaker Out**

Use this audio jack to connect rear speakers.

**⑧ Optical S/PDIF Out Connector**

This connector provides digital audio out to an external audio system that supports digital optical audio. Before using this feature, ensure that your audio system provides an optical digital audio in connector.

**⑨ Line In/Side Speaker Out**

The line in jack. Use this audio jack for line in devices such as an optical drive, walkman, etc.

**⑩ Line Out/Front Speaker Out**

The line out jack.

**⑪ Mic In**

The Mic in jack.

Audio Jack Configurations:

| Jack                           | Headphone/<br>2-channel | 4-channel | 5.1-channel | 7.1-channel |
|--------------------------------|-------------------------|-----------|-------------|-------------|
| ⑥ Center/Subwoofer Speaker Out |                         |           | ✓           | ✓           |
| ⑦ Rear Speaker Out             |                         | ✓         | ✓           | ✓           |
| ⑨ Line In/Side Speaker Out     |                         |           |             | ✓           |
| ⑩ Line Out/Front Speaker Out   | ✓                       | ✓         | ✓           | ✓           |
| ⑪ Mic In                       |                         |           |             | ✓           |

If you want to install a Side Speaker, you need to retask either the Line in jack to be Side Speaker out through the audio driver.

Please visit GIGABYTE's website for details on configuring the audio software.

## 1-8 Internal Connectors

|                                      |                       |
|--------------------------------------|-----------------------|
| 1) ATX_12V_1/ATX_12V_2               | 12) F_PANEL           |
| 2) ATX                               | 13) F_AUDIO           |
| 3) CPU_FAN                           | 14) F_U32C            |
| 4) SYS_FAN1/2                        | 15) F_U32_1/F_U32_2   |
| 5) SYS_FAN5A/B_PUMP/SYS_FAN6A/B_PUMP | 16) F_USB1/F_USB2     |
| 6) CPU_OPT                           | 17) TPM               |
| 7) EC_TEMP1/EC_TEMP2                 | 18) CLR_CMOS          |
| 8) D_LED1/D_LED2                     | 19) BAT               |
| 9) LED_C1/LED_C2                     | 20) THB_C             |
| 10) SATA3 0/1/2/3/4/5/6/7            | 21) CPU/DRAM/VGA/BOOT |
| 11) M2M/M2Q/M2P                      |                       |

Read the following guidelines before connecting external devices:

- First make sure your devices are compliant with the connectors you wish to connect.
- Before installing the devices, be sure to turn off the devices and your computer. Unplug the power cord from the power outlet to prevent damage to the devices.
- After installing the device and before turning on the computer, make sure the device cable has been securely attached to the connector on the motherboard.

## 1/2) ATX\_12V\_1/ATX\_12V\_2/ATX (2x2, 2x4, 12V Power Connectors and 2x12 Main Power Connector)

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, first make sure the power supply is turned off and all devices are properly installed. The power connector possesses a foolproof design. Connect the power supply cable to the power connector in the correct orientation.

The 12V power connector mainly supplies power to the CPU. If the 12V power connector is not connected, the computer will not start.

To meet expansion requirements, it is recommended that a power supply that can withstand high power consumption be used (500W or greater). If a power supply is used that does not provide the required power, the result can lead to an unstable or unbootable system.

ATX\_12V\_2:

| Pin No. | Definition |
|---------|------------|
| 1       | GND        |
| 2       | GND        |
| 3       | +12V       |
| 4       | +12V       |

ATX\_12V\_1:

| Pin No. | Definition                 | Pin No. | Definition                  |
|---------|----------------------------|---------|-----------------------------|
| 1       | GND (Only for 2x4-pin 12V) | 5       | +12V (Only for 2x4-pin 12V) |
| 2       | GND (Only for 2x4-pin 12V) | 6       | +12V (Only for 2x4-pin 12V) |
| 3       | GND                        | 7       | +12V                        |
| 4       | GND                        | 8       | +12V                        |

ATX:

| Pin No. | Definition                   | Pin No. | Definition                  |
|---------|------------------------------|---------|-----------------------------|
| 1       | 3.3V                         | 13      | 3.3V                        |
| 2       | 3.3V                         | 14      | -12V                        |
| 3       | GND                          | 15      | GND                         |
| 4       | +5V                          | 16      | PS_ON (soft On/Off)         |
| 5       | GND                          | 17      | GND                         |
| 6       | +5V                          | 18      | GND                         |
| 7       | GND                          | 19      | GND                         |
| 8       | Power Good                   | 20      | NC                          |
| 9       | 5VSB (stand by +5V)          | 21      | +5V                         |
| 10      | +12V                         | 22      | +5V                         |
| 11      | +12V (Only for 2x12-pin ATX) | 23      | +5V (Only for 2x12-pin ATX) |
| 12      | 3.3V (Only for 2x12-pin ATX) | 24      | GND (Only for 2x12-pin ATX) |

### 3/4) CPU\_FAN/SYS\_FAN1/2 (Fan Headers)

All fan headers on this motherboard are 4-pin. Most fan headers possess a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation (the black connector wire is the ground wire). The speed control function requires the use of a fan with fan speed control design. For optimum heat dissipation, it is recommended that a system fan be installed inside the chassis.

CPU\_FAN

SYS\_FAN1

SYS\_FAN2

| Pin No. | Definition            |
|---------|-----------------------|
| 1       | GND                   |
| 2       | Voltage Speed Control |
| 3       | Sense                 |
| 4       | PWM Speed Control     |

### 5) SYS\_FAN5A/B\_PUMP/SYS\_FAN6A/B\_PUMP (System Fan/Water Cooling Pump Headers)

The fan/pump headers are 4-pin. Most fan headers possess a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation (the black connector wire is the ground wire). The speed control function requires the use of a fan with fan speed control design. For optimum heat dissipation, it is recommended that a system fan be installed inside the chassis. The header also provides speed control for a water cooling pump, refer to Chapter 2, "BIOS Setup," "Settings\Smart Fan 5," for more information.

| Pin No. | Definition            |
|---------|-----------------------|
| 1       | GND                   |
| 2       | Voltage Speed Control |
| 3       | Sense                 |
| 4       | PWM Speed Control     |

### 6) CPU\_OPT (Water Cooling CPU Fan Header)

The fan header is 4-pin and possesses a foolproof insertion design. Most fan headers possess a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation (the black connector wire is the ground wire). The speed control function requires the use of a fan with fan speed control design.

| Pin No. | Definition            |
|---------|-----------------------|
| 1       | GND                   |
| 2       | Voltage Speed Control |
| 3       | Sense                 |
| 4       | PWM Speed Control     |

- Be sure to connect fan cables to the fan headers to prevent your CPU and system from overheating. Overheating may result in damage to the CPU or the system may hang.
- These fan headers are not configuration jumper blocks. Do not place a jumper cap on the headers.

## 7) EC\_TEMP1/EC\_TEMP2 (Temperature Sensor Headers)

Connect the thermistor cables to the headers for temperature detection.

| Pin No. | Definition |
|---------|------------|
| 1       | SENSOR IN  |
| 2       | GND        |

## 8) D\_LED1/D\_LED2 (Addressable LED Strip Headers)

The headers can be used to connect a standard 5050 addressable LED strip, with maximum power rating of 5A (5V) and maximum number of 1000 LEDs.

| Pin No. | Definition |
|---------|------------|
| 1       | V (5V)     |
| 2       | D          |
| 3       | No Pin     |
| 4       | G          |

Connect your addressable LED strip to the header. The power pin (marked with a triangle on the plug) of the LED strip must be connected to Pin 1 of the addressable LED strip header. Incorrect connection may lead to the damage of the LED strip.

## 9) LED\_C1/LED\_C2 (RGB LED Strip Headers)

The headers can be used to connect a standard 5050 RGB LED strip (12V/G/R/B), with maximum power rating of 2A (12V) and maximum length of 2m.

| Pin No. | Definition |
|---------|------------|
| 1       | 12V        |
| 2       | G          |
| 3       | R          |
| 4       | B          |

Connect one end of the RGB LED strip extension cable to the header and the other end to your RGB LED strip. The black wire (marked with a triangle on the plug) of the extension cable must be connected to Pin 1 (12V) of this header. The 12V pin (marked with an arrow) on the other end of the extension cable must be lined up with the 12V of the LED strip. Be careful with the connection orientation of the LED strip; incorrect connection may lead to the damage of the LED strip.

For how to turn on/off the lights of the LED strip please visit the "Unique Features" webpage of GIGABYTE's website.

Before installing the devices, be sure to turn off the devices and your computer. Unplug the power cord from the power outlet to prevent damage to the devices.

## 10) SATA3 0/1/2/3/4/5/6/7 (SATA 6Gb/s Connectors)

The SATA connectors conform to SATA 6Gb/s standard and are compatible with SATA 3Gb/s and SATA 1.5Gb/s standard. Each SATA connector supports a single SATA device. The SATA connectors support RAID 0, RAID 1, and RAID 10. Refer to Chapter 3, "Configuring a RAID Set," for instructions on configuring a RAID array.

To enable hot-plugging for the SATA ports, refer to Chapter 2, "BIOS Setup," "Settings\IO Ports\ SATA Configuration," for more information.

## 11) M2M/M2Q/M2P (M.2 Socket 3 Connectors)

The M.2 connectors support M.2 SATA SSDs or M.2 PCIe SSDs and support RAID configuration. Please note that an M.2 PCIe SSD cannot be used to create a RAID set either with an M.2 SATA SSD or a SATA hard drive. Refer to Chapter 3, "Configuring a RAID Set," for instructions on configuring a RAID array.

Follow the steps below to correctly install an M.2 SSD in the M.2 connector.

Step 1:

Get a screw and a standoff from the included M.2 screw and standoff packs. Locate the M.2 connector where you will install the M.2 SSD, use a screwdriver to unfasten the screw on the heatsink and then remove the heatsink.

Step 2:

Locate the proper mounting hole for the M.2 SSD to be installed and then tighten the standoff first. Insert the M.2 SSD into the M.2 connector at an angle.

Step 3:

Press the M.2 SSD down and then secure it with the screw. Replace the heatsink and secure it to the original hole.

- Select the proper hole for the M.2 SSD to be installed and refasten the screw and standoff.
- Make sure to remove the protective film from the bottom of the heatsink before replacing the heatsink.

## 12) F\_PANEL (Front Panel Header)

Connect the power switch, reset switch, speaker, chassis intrusion switch/sensor and system status indicator on the chassis to this header according to the pin assignments below. Note the positive and negative pins before connecting the cables.

- **PLED/PWR\_LED (Power LED):**

| System Status | LED |
|---------------|-----|
| S0            | On  |
| S3/S4/S5      | Off |

Connects to the power status indicator on the chassis front panel. The LED is on when the system is operating. The LED is off when the system is in S3/S4 sleep state or powered off (S5).

- **PW (Power Switch):**

Connects to the power switch on the chassis front panel. You may configure the way to turn off your system using the power switch (refer to Chapter 2, "BIOS Setup," "Settings\Platform Power," for more information).

- **SPEAK (Speaker):**

Connects to the speaker on the chassis front panel. The system reports system startup status by issuing a beep code. One single short beep will be heard if no problem is detected at system startup.

- **HD (Hard Drive Activity LED):**

Connects to the hard drive activity LED on the chassis front panel. The LED is on when the hard drive is reading or writing data.

- **RES (Reset Switch):**

Connects to the reset switch on the chassis front panel. Press the reset switch to restart the computer if the computer freezes and fails to perform a normal restart.

- **CI (Chassis Intrusion Header):**

Connects to the chassis intrusion switch/sensor on the chassis that can detect if the chassis cover has been removed. This function requires a chassis with a chassis intrusion switch/sensor.

- **NC: No connection.**

The front panel design may differ by chassis. A front panel module mainly consists of power switch, reset switch, power LED, hard drive activity LED, speaker and etc. When connecting your chassis front panel module to this header, make sure the wire assignments and the pin assignments are matched correctly.

## 13) F\_AUDIO (Front Panel Audio Header)

The front panel audio header supports High Definition audio (HD). You may connect your chassis front panel audio module to this header. Make sure the wire assignments of the module connector match the pin assignments of the motherboard header. Incorrect connection between the module connector and the motherboard header will make the device unable to work or even damage it.

| Pin No. | Definition | Pin No. | Definition |
|---------|------------|---------|------------|
| 1       | MIC2_L     | 6       | Sense      |
| 2       | GND        | 7       | FAUDIO_JD  |
| 3       | MIC2_R     | 8       | No Pin     |
| 4       | NC         | 9       | LINE2_L    |
| 5       | LINE2_R    | 10      | Sense      |

Some chassis provide a front panel audio module that has separated connectors on each wire instead of a single plug. For information about connecting the front panel audio module that has different wire assignments, please contact the chassis manufacturer.

#### 14) F\_U32C (USB Type-C™ Header with USB 3.2 Gen 2 Support)

The header conforms to USB 3.2 Gen 2 specification and can provide one USB port.

| Pin No. | Definition | Pin No. | Definition | Pin No. | Definition |
|---------|------------|---------|------------|---------|------------|
| 1       | VBUS       | 8       | CC1        | 15      | RX2+       |
| 2       | TX1+       | 9       | SBU1       | 16      | RX2-       |
| 3       | TX1-       | 10      | SBU2       | 17      | GND        |
| 4       | GND        | 11      | VBUS       | 18      | D-         |
| 5       | RX1+       | 12      | TX2+       | 19      | D+         |
| 6       | RX1-       | 13      | TX2-       | 20      | CC2        |
| 7       | VBUS       | 14      | GND        |         |            |

#### 15) F\_U32\_1/F\_U32\_20 (USB 3.2 Gen 1 Headers)

The headers conform to USB 3.2 Gen 1 and USB 2.0 specification and each header can provide two USB ports. For purchasing the optional 3.5" front panel that provides two USB 3.2 Gen 1 ports, please contact the local dealer.

| Pin No. | Definition | Pin No. | Definition | Pin No. | Definition |
|---------|------------|---------|------------|---------|------------|
| 1       | VBUS       | 8       | D1-        | 15      | SSTX2-     |
| 2       | SSRX1-     | 9       | D1+        | 16      | GND        |
| 3       | SSRX1+     | 10      | NC         | 17      | SSRX2+     |
| 4       | GND        | 11      | D2+        | 18      | SSRX2-     |
| 5       | SSTX1-     | 12      | D2-        | 19      | VBUS       |
| 6       | SSTX1+     | 13      | GND        | 20      | No Pin     |
| 7       | GND        | 14      | SSTX2+     |         |            |

#### 16) F\_USB1/F\_USB2 (USB 2.0/1.1 Headers)

The headers conform to USB 2.0/1.1 specification. Each USB header can provide two USB ports via an optional USB bracket. For purchasing the optional USB bracket, please contact the local dealer.

| Pin No. | Definition | Pin No. | Definition |
|---------|------------|---------|------------|
| 1       | Power (5V) | 6       | USB DY+    |
| 2       | Power (5V) | 7       | GND        |
| 3       | USB DX-    | 8       | GND        |
| 4       | USB DY-    | 9       | No Pin     |
| 5       | USB DX+    | 10      | NC         |

- Do not plug the IEEE 1394 bracket (2x5-pin) cable into the USB 2.0/1.1 header.
- Prior to installing the USB bracket, be sure to turn off your computer and unplug the power cord from the power outlet to prevent damage to the USB bracket.

## 17) TPM (Trusted Platform Module Header)

You may connect a TPM (Trusted Platform Module) to this header.

| Pin No. | Definition | Pin No. | Definition |
|---------|------------|---------|------------|
| 1       | LAD0       | 7       | LAD3       |
| 2       | VCC3       | 8       | GND        |
| 3       | LAD1       | 9       | LFRAME     |
| 4       | No Pin     | 10      | NC         |
| 5       | LAD2       | 11      | SERIRQ     |
| 6       | LCLK       | 12      | LRESET     |

## 18) CLR\_CMOS (Clear CMOS Jumper)

Use this jumper to clear the BIOS configuration and reset the CMOS values to factory defaults. To clear the CMOS values, use a metal object like a screwdriver to touch the two pins for a few seconds.

Open: Normal

Short: Clear CMOS Values

- Always turn off your computer and unplug the power cord from the power outlet before clearing the CMOS values.
- After system restart, go to BIOS Setup to load factory defaults (select Load Optimized Defaults) or manually configure the BIOS settings (refer to Chapter 2, "BIOS Setup," for BIOS configurations).

## 19) BAT (Battery)

The battery provides power to keep the values (such as BIOS configurations, date, and time information) in the CMOS when the computer is turned off. Replace the battery when the battery voltage drops to a low level, or the CMOS values may not be accurate or may be lost.

You may clear the CMOS values by removing the battery:

1. Turn off your computer and unplug the power cord.
2. Gently remove the battery from the battery holder and wait for one minute. (Or use a metal object like a screwdriver to touch the positive and negative terminals of the battery holder, making them short for 5 seconds.)
3. Replace the battery.
4. Plug in the power cord and restart your computer.

- Always turn off your computer and unplug the power cord before replacing the battery.
- Replace the battery with an equivalent one. Damage to your devices may occur if the battery is replaced with an incorrect model.
- Contact the place of purchase or local dealer if you are not able to replace the battery by yourself or uncertain about the battery model.
- When installing the battery, note the orientation of the positive side (+) and the negative side (-) of the battery (the positive side should face up).
- Used batteries must be handled in accordance with local environmental regulations.

## 20) THB\_C (GIGABYTE Add-in Card Connector)

This connector is for a GIGABYTE add-in card.

## 21) CPU/DRAM/VGA/BOOT (Status LEDs)

The status LEDs show whether the CPU, memory, graphics card, and operating system are working properly after system power-on. If the CPU/DRAM/VGA LED is on, that means the corresponding device is not working normally; if the BOOT LED is on, that means you haven't entered the operating system yet.

|     |      |
|-----|------|
| CPU | DRAM |
| VGA | BOOT |

**CPU:** CPU status LED

**DRAM:** Memory status LED

**VGA:** Graphics card status LED

**BOOT:** Operating system status LED

# Chapter 2 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the CMOS on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters and loading operating system, etc. BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features.

When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <Delete> key during the POST when the power is turned on.

To upgrade the BIOS, use either the GIGABYTE Q-Flash or @BIOS utility.

- Q-Flash allows the user to quickly and easily upgrade or back up BIOS without entering the operating system.
- @BIOS is a Windows-based utility that searches and downloads the latest version of BIOS from the Internet and updates the BIOS.

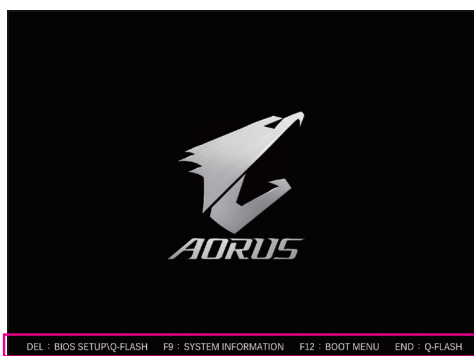

- Because BIOS flashing is potentially risky, if you do not encounter problems using the current version of BIOS, it is recommended that you not flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the "Load Optimized Defaults" section in this chapter or introductions of the battery/clear CMOS jumper in Chapter 1 for how to clear the CMOS values.)

## 2-1 Startup Screen

The following startup Logo screen will appear when the computer boots.

(Sample BIOS Version: T8)

There are two different BIOS modes as follows and you can use the <F2> key to switch between the two modes. Easy Mode allows users to quickly view their current system information or to make adjustments for optimum performance. In Easy Mode, you can use your mouse to move through configuration items. The Advanced Mode provides detailed BIOS settings. You can press the arrow keys on your keyboard to move among the items and press <Enter> to accept or enter a sub-menu. Or you can use your mouse to select the item you want.

- When the system is not stable as usual, select the **Load Optimized Defaults** item to set your system to its defaults.
- The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

## 2-2 The Main Menu

### Advanced Mode Function Keys

|                      |  |
|----------------------|--|
| <←><→>               | Move the selection bar to select a setup menu                            |
| <↑><↓>               | Move the selection bar to select an configuration item on a menu         |
| <Enter>/Double Click | Execute command or enter a menu  |
| <+>/<Page Up>        | Increase the numeric value or make changes                               |
| <->/<Page Down>      | Decrease the numeric value or make changes                               |
| <F1>                 | Show descriptions of the function keys                                   |
| <F2>                 | Switch to Easy Mode  |
| <F3>                 | Save the current BIOS settings to a profile                              |
| <F4>                 | Load the BIOS settings from a profile created before                     |
| <F5>                 | Restore the previous BIOS settings for the current submenus              |
| <F6>                 | Display the Smart Fan 5 screen   |
| <F7>                 | Load the Optimized BIOS default settings for the current submenus        |
| <F8>                 | Access the Q-Flash utility   |
| <F10>                | Save all the changes and exit the BIOS Setup program                     |
| <F11>                | Switch to the Favorites submenu  |
| <F12>                | Capture the current screen as an image and save it to your USB drive     |
| <Insert>             | Add or remove a favorite option  |
| <Ctrl>+<S>           | Display information on the installed memory                              |
| <Esc>                | Main Menu: Exit the BIOS Setup program<br>Submenus: Exit current submenu |

## 2-3 Favorites (F11)

Set your frequently used options as your favorites and use the <F11> key to quickly switch to the page where all of your favorite options are located. To add or remove a favorite option, go to its original page and press <Insert> on the option. The option is marked with a star sign if set as a "favorite."

## 2-4 Tweaker

Whether the system will work stably with the overclock/overvoltage settings you made is dependent on your overall system configurations. Incorrectly doing overclock/overvoltage may result in damage to CPU, chipset, or memory and reduce the useful life of these components. This page is for advanced users only and we recommend you not to alter the default settings to prevent system instability or other unexpected results. (Inadequately altering the settings may result in system's failure to boot. If this occurs, clear the CMOS values and reset the board to default values.)

### ☞ CPU Clock Control

Allows you to manually set the CPU base clock in 1 MHz increments. (Default: Auto)

**Important:** It is highly recommended that the CPU frequency be set in accordance with the CPU specifications.

### ☞ Spread Spectrum Control

Enables or disables CPU/PCIe Spread Spectrum. (Default: Auto)

### ☞ CPU Clock Ratio

Allows you to alter the clock ratio for the installed CPU. The adjustable range is dependent on the CPU being installed.

## ■ Advanced CPU Settings

### ☞ Core Performance Boost

Allows you to determine whether to enable the Core Performance Boost (CPB) technology, a CPU performance-boost technology. (Default: Auto)

### ☞ SVM Mode

Virtualization enhanced by Virtualization Technology will allow a platform to run multiple operating systems and applications in independent partitions. With virtualization, one computer system can function as multiple virtual systems. (Default: Disabled)

### ☞ Global C-state Control

Allows you to determine whether to let the CPU enter C states. When enabled, the CPU core frequency will be reduced during system halt state to decrease power consumption. (Default: Enabled)

### ☞ Power Supply Idle Control

Enables or disables Package C6 State.

- ▶▶ Typical Current Idle Disables this function.
- ▶▶ Low Current Idle Enables this function.
- ▶▶ Auto Lets the BIOS automatically configure this setting. (Default)

- ☞ **CCD Control**  
Sets the number of CCDs to be used. (Default: Auto)
- ☞ **Downcore Control**  
Allows you to select the number of CPU cores to enable (the number of CPU cores may vary by CPU). (Default: Auto)
- ☞ **SMT Mode**  
Allows you to enable or disable the CPU Simultaneous Multi-Threading technology. This feature only works for operating systems that support multi-processor mode. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)
- ☞ **Extreme Memory Profile (X.M.P.)** <sup>(Note)</sup>  
Allows the BIOS to read the SPD data on XMP memory module(s) to enhance memory performance when enabled.

  - ▶▶ Disabled                      Disables this function. (Default)
  - ▶▶ Profile1                      Uses Profile 1 settings.
  - ▶▶ Profile2 <sup>(Note)</sup>              Uses Profile 2 settings.
- ☞ **XMP High Frequency Support** <sup>(Note)</sup>  
Allows you to select the compatibility level for high-frequency memory. This item is configurable only when **Extreme Memory Profile (X.M.P.)** is set to **Profile1** or **Profile2**. (Default: Auto)
- ☞ **System Memory Multiplier**  
Allows you to set the system memory multiplier. **Auto** sets memory multiplier according to memory SPD data. (Default: Auto)

  - **Advanced Memory Settings**
  - **Memory Subtimings**
  - ▼ **Standard Timing Control, Advanced Timing Control, CAD Bus Setup Timing, CAD Bus Drive Strength, Data Bus Configuration**  
These sections provide memory timing settings. Note: Your system may become unstable or fail to boot after you make changes on the memory timings. If this occurs, please reset the board to default values by loading optimized defaults or clearing the CMOS values.
  - **SPD Info**  
Displays information on the installed memory.
- ☞ **CPU Vcore/Dynamic Vcore(DVID)/VCORE SOC/Dynamic VCORE SOC(DVID)/CPU VDD18/PCH\_CLDO/PM\_1VSOC/PM\_1V8/DRAM Voltage (CH A/B)/DDRVPV Voltage (CH A/B)/DRAM Termination (CH A/B)//DRAM Voltage (CH C/D)/DDRVPV Voltage (CH C/D)/DRAM Termination (CH C/D)**  
These items allow you to adjust the CPU Vcore and memory voltages.

  - **CPU/VRM Settings**  
This submenu allows you to configure Load-Line Calibration level, over-voltage protection level, over-current protection level, and PWM phases.

(Note) This item is present only when you install a CPU and a memory module that support this feature.

## 2-5 Settings

### ■ Platform Power

#### ☞ AC BACK

Determines the state of the system after the return of power from an AC power loss.

- ▶▶ Memory The system returns to its last known awake state upon the return of the AC power.
- ▶▶ Always On The system is turned on upon the return of the AC power.
- ▶▶ Always Off The system stays off upon the return of the AC power. (Default)

#### ☞ ErP

Determines whether to let the system consume least power in S5 (shutdown) state. (Default: Disabled)

Note: When this item is set to **Enabled**, the following functions will become unavailable: Resume by Alarm, power on by mouse, and power on by keyboard.

#### ☞ Soft-Off by PWR-BTTN

Configures the way to turn off the computer in MS-DOS mode using the power button.

- ▶▶ Instant-Off Press the power button and then the system will be turned off instantly. (Default)
- ▶▶ Delay 4 Sec. Press and hold the power button for 4 seconds to turn off the system. If the power button is pressed for less than 4 seconds, the system will enter suspend mode.

#### ☞ Power Loading

Enables or disables dummy load. When the power supply is at low load, a self-protection will activate causing it to shutdown or fail. If this occurs, please set to **Enabled**. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

#### ☞ Resume by Alarm

Determines whether to power on the system at a desired time. (Default: Disabled)

If enabled, set the date and time as following:

- ▶▶ Wake up day: Turn on the system at a specific time on each day or on a specific day in a month.
- ▶▶ Wake up hour/minute/second: Set the time at which the system will be powered on automatically.

Note: When using this function, avoid inadequate shutdown from the operating system or removal of the AC power, or the settings may not be effective.

#### ☞ Wake on LAN

Enables or disables the wake on LAN function. (Default: Enabled)

## ■ IO Ports

### ⊟ Initial Display Output

Specifies the first initiation of the monitor display from the installed PCI Express graphics card.

- ▶▶ PCIe 1 Slot     Sets the graphics card on the PCIEX16\_1 slot as the first display. (Default)
- ▶▶ PCIe 2 Slot     Sets the graphics card on the PCIEX8\_1 slot as the first display.
- ▶▶ PCIe 3 Slot     Sets the graphics card on the PCIEX16\_2 slot as the first display.
- ▶▶ PCIe 4 Slot     Sets the graphics card on the PCIEX8\_2 slot as the first display.

### ⊟ PCIEX16\_1 Bifurcation

Allows you to determine how the bandwidth of the PCIEX16\_1 slot is divided. Options: Auto, x16, x4x4x4x4. (Default: Auto)

### ⊟ PCIEX8\_1 Bifurcation

Allows you to determine how the bandwidth of the PCIEX8\_1 slot is divided. Options: Auto, x8, x4x4. (Default: Auto)

### ⊟ PCIEX16\_2 Bifurcation

Allows you to determine how the bandwidth of the PCIEX16\_2 slot is divided. Options: Auto, x16, x4x4x4x4. (Default: Auto)

### ⊟ PCIEX8\_2 Bifurcation

Allows you to determine how the bandwidth of the PCIEX8\_2 slot is divided. Options: Auto, x8, x4x4. (Default: Auto)

### ⊟ Above 4G Decoding

Enables or disables 64-bit capable devices to be decoded in above 4 GB address space (only if your system supports 64-bit PCI decoding). Set to **Enabled** if more than one advanced graphics card are installed and their drivers are not able to be launched when entering the operating system (because of the limited 4 GB memory address space). (Default: Disabled)

### ⊟ F\_U32C Gen Speed

Allows you to set the operation mode of the F\_U32C header to Gen 1 or Gen 2. (Default: Auto)

### ⊟ Onboard LAN Controller

Enables or disables the onboard LAN function. (Default: Enabled)

If you wish to install a 3rd party add-in network card instead of using the onboard LAN, set this item to **Disabled**.

## ■ USB Configuration

### ⊟ Legacy USB Support

Allows USB keyboard/mouse to be used in MS-DOS. (Default: Enabled)

### ⊟ XHCI Hand-off

Determines whether to enable XHCI Hand-off feature for an operating system without XHCI Hand-off support. (Default: Enabled)

### ⊟ USB Mass Storage Driver Support

Enables or disables support for USB storage devices. (Default: Enabled)

### ⊟ Port 60/64 Emulation

Enables or disables emulation of I/O ports 64h and 60h. This should be enabled for full legacy support for USB keyboards/mice in MS-DOS or in operating system that does not natively support USB devices. (Default: Disabled)

☞ **Mass Storage Devices**

Displays a list of connected USB mass storage devices. This item appears only when a USB storage device is installed.

■ **SATA Configuration**

☞ **SATA Mode**

Enables or disables RAID for the SATA controllers integrated in the Chipset or configures the SATA controllers to AHCI mode.

- ▶▶ RAID Enables RAID for the SATA controller.
- ▶▶ AHCI Configures the SATA controllers to AHCI mode. Advanced Host Controller Interface (AHC) is an interface specification that allows the storage driver to enable advanced Serial ATA features such as Native Command Queuing and hot plug. (Default)

☞ **NVMe RAID mode**

Allows you to determine whether to use your M.2 NVMe PCIe SSDs to configure RAID. (Default: Disabled)

☞ **Chipset SATA Port Enable**

Enables or disables the integrated SATA controllers. (Default: Enabled)

☞ **Chipset SATA Port Hot plug**

Enables or disable the hot plug capability for each SATA port. (Default: Disabled)

☞ **Chipset SATA Port 0/1/2/3/4/5/6/7**

Displays the information of the connected SATA device(s).

▶ **Network Stack Configuration**

☞ **Network Stack**

Disables or enables booting from the network to install a GPT format OS, such as installing the OS from the Windows Deployment Services server. (Default: Disabled)

☞ **Ipv4 PXE Support**

Enables or disables IPv4 PXE Support. This item is configurable only when **Network Stack** is enabled.

☞ **Ipv4 HTTP Support**

Enables or disables HTTP boot support for IPv4. This item is configurable only when **Network Stack** is enabled.

☞ **Ipv6 PXE Support**

Enables or disables IPv6 PXE Support. This item is configurable only when **Network Stack** is enabled.

☞ **Ipv6 HTTP Support**

Enables or disables HTTP boot support for IPv6. This item is configurable only when **Network Stack** is enabled.

☞ **IPSEC Certificate**

Enables or disables the Internet Protocol Security. This item is configurable only when **Network Stack** is enabled.

☞ **PXE boot wait time**

Allows you to configure how long to wait before you can press <Esc> to abort the PXE boot.

☞ **Media detect count**

Allows you to set the number of times to check the presence of media.

## ■ Miscellaneous

### ☞ LEDs in System Power On State

Allows you to enable or disable motherboard LED lighting when the system is on.

- ▶▶ Off Disables the selected lighting mode when the system is on.
- ▶▶ On Enables the selected lighting mode when the system is on. (Default)

### ☞ LEDs in Sleep, Hibernation, and Soft Off States

Allows you to set the lighting mode of the motherboard LEDs in system S3/S4/S5 state.

This item is configurable when **LEDs in System Power On State** is set to **On**.

- ▶▶ Off Disables the selected lighting mode when the system enters S3/S4/S5 state. (Default)
- ▶▶ On Enables the selected lighting mode when the system enters S3/S4/S5 state.

### ☞ PCIe Slot Configuration

Allows you to set the operation mode of the PCI Express slots to Gen 1, Gen 2, Gen 3, or Gen 4. Actual operation mode is subject to the hardware specification of each slot. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

### ☞ 3DMark01 Enhancement

Allows you to determine whether to enhance some legacy benchmark performance. (Default: Disabled)

### ☞ IOMMU

Enables or disables AMD IOMMU support. (Default: Auto)

### ☞ AMD CPU fTPM

Enables or disables the TPM 2.0 function integrated in the AMD CPU. (Default: Disabled)

## ■ Trusted Computing

Enables or disables Trusted Platform Module (TPM).

## ■ AMD CBS

This sub-menu provides AMD CBS-related configuration options.

## ■ PC Health

### ☞ Reset Case Open Status

- ▶▶ Disabled Keeps or clears the record of previous chassis intrusion status. (Default)
- ▶▶ Enabled Clears the record of previous chassis intrusion status and the **Case Open** field will show "No" at next boot.

### ☞ Case Open

Displays the detection status of the chassis intrusion detection device attached to the motherboard CI header. If the system chassis cover is removed, this field will show "Yes", otherwise it will show "No". To clear the chassis intrusion status record, set **Reset Case Open Status** to **Enabled**, save the settings to the CMOS, and then restart your system.

### ☞ CPU Vcore/CPU VCORE SOC/CPU VDD18/DRAM Channel A/B Voltage/DRAM Channel C/D Voltage/DDRVP Channel A/B Voltage/DDRVP Channel C/D Voltage/ +3.3V/+5V/ Chipset Core/+12V

Displays the current system voltages.

## ■ Smart Fan 5

### ☞ Monitor

Allows you to select a target to monitor and to make further adjustment. (Default: CPU FAN)

### ☞ Fan Speed Control

Allows you to determine whether to enable the fan speed control function and adjust the fan speed.

▶▶ Normal Allows the fan to run at different speeds according to the temperature. You can adjust the fan speed with System Information Viewer based on your system requirements. (Default)

▶▶ Silent Allows the fan to run at slow speeds.

▶▶ Manual Allows you to control the fan speed in the curve graph.

▶▶ Full Speed Allows the fan to run at full speeds.

### ☞ Fan Control Use Temperature Input

Allows you to select the reference temperature for fan speed control.

### ☞ Temperature Interval

Allows you to select the temperature interval for fan speed change.

### ☞ Fan/Pump Control Mode

▶▶ Auto Lets the BIOS automatically detect the type of fan installed and sets the optimal control mode. (Default)

▶▶ Voltage Voltage mode is recommended for a 3-pin fan/pump.

▶▶ PWM PWM mode is recommended for a 4-pin fan/pump.

### ☞ Fan/Pump Stop

Enables or disables the fan/pump stop function. You can set the temperature limit using the temperature curve. The fan or pump stops operation when the temperature is lower than the limit. (Default: Disabled)

### ☞ Temperature

Displays the current temperature of the selected target area.

### ☞ Fan Speed

Displays current fan/pump speeds.

### ☞ Flow Rate

Displays the flow rate of your water cooling system.

### ☞ Temperature Warning

Sets the warning threshold for temperature. When temperature exceeds the threshold, BIOS will emit warning sound. Options are: Disabled (default), 60°C/140°F, 70°C/158°F, 80°C/176°F, 90°C/194°F.

### ☞ Fan/Pump Fail Warning

Allows the system to emit warning sound if the fan/pump is not connected or fails. Check the fan/pump condition or fan/pump connection when this occurs. (Default: Disabled)

(Note) The SYS\_FAN5A\_PUMP option can control the SYS\_FAN5A\_PUMP and SYS\_FAN5B\_PUMP connectors at the same time. The SYS\_FAN6A\_PUMP option can control the SYS\_FAN6A\_PUMP and SYS\_FAN6B\_PUMP connectors at the same time.

## 2-6 System Info.

This section provides information on your motherboard model and BIOS version. You can also select the default language used by the BIOS and manually set the system time.

### System Language

Selects the default language used by the BIOS.

### System Date

Sets the system date. The date format is week (read-only), month, date, and year. Use <Enter> to switch between the Month, Date, and Year fields and use the <Page Up> or <Page Down> key to set the desired value.

### System Time

Sets the system time. The time format is hour, minute, and second. For example, 1 p.m. is 13:00:00. Use <Enter> to switch between the Hour, Minute, and Second fields and use the <Page Up> or <Page Down> key to set the desired value.

### Access Level

Displays the current access level depending on the type of password protection used. (If no password is set, the default will display as **Administrator**.) The Administrator level allows you to make changes to all BIOS settings; the User level only allows you to make changes to certain BIOS settings but not all.

### Plug in Devices Info

Displays information on your SATA, PCI Express, and M.2 devices if installed.

### Q-Flash

Allows you to access the Q-Flash utility to update the BIOS or back up the current BIOS configuration.

## 2-7 Boot

### Boot Option Priorities

Specifies the overall boot order from the available devices. Removable storage devices that support GPT format will be prefixed with "UEFI:" string on the boot device list. To boot from an operating system that supports GPT partitioning, select the device prefixed with "UEFI:" string.

Or if you want to install an operating system that supports GPT partitioning such as Windows 10 64-bit, select the optical drive that contains the Windows 10 64-bit installation disc and is prefixed with "UEFI:" string.

### Bootup NumLock State

Enables or disables Numlock feature on the numeric keypad of the keyboard after the POST. (Default: On)

### Security Option

Specifies whether a password is required every time the system boots, or only when you enter BIOS Setup. After configuring this item, set the password(s) under the **Administrator Password/User Password** item.

- ▶▶ Setup A password is only required for entering the BIOS Setup program.
- ▶▶ System A password is required for booting the system and for entering the BIOS Setup program. (Default)

### Full Screen LOGO Show

Allows you to determine whether to display the GIGABYTE Logo at system startup. **Disabled** skips the GIGABYTE Logo when the system starts up. (Default: Enabled)

### Fast Boot

Enables or disables Fast Boot to shorten the OS boot process. **Ultra Fast** provides the fastest bootup speed. (Default: Disabled)

### SATA Support

- ▶▶ Last Boot SATA Devices Only Except for the previous boot drive, all SATA devices are disabled before the OS boot process completes. (Default)

- ▶▶ All SATA Devices All SATA devices are functional in the operating system and during the POST. This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### NVMe Support

Allows you to enable or disable NVMe device(s). (Default: Enabled)

This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### ⌵ **VGA Support**

Allows you to select which type of operating system to boot.

- ▶▶ Auto Enables legacy option ROM only.
- ▶▶ EFI Driver Enables EFI option ROM. (Default)

This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### ⌵ **USB Support**

- ▶▶ Disabled All USB devices are disabled before the OS boot process completes.
- ▶▶ Full Initial All USB devices are functional in the operating system and during the POST. (Default)
- ▶▶ Partial Initial Part of the USB devices are disabled before the OS boot process completes.

This item is configurable only when **Fast Boot** is set to **Enabled**. This function is disabled when **Fast Boot** is set to **Ultra Fast**.

### ⌵ **Network Stack Driver Support**

- ▶▶ Disabled Disables booting from the network. (Default)
- ▶▶ Enabled Enables booting from the network.

This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### ⌵ **CSM Support**

Enables or disables UEFI CSM (Compatibility Support Module) to support a legacy PC boot process.

- ▶▶ Disabled Disables UEFI CSM and supports UEFI BIOS boot process only.
- ▶▶ Enabled Enables UEFI CSM. (Default)

### ⌵ **LAN PXE Boot Option ROM**

Allows you to select whether to enable the legacy option ROM for the LAN controller. (Default: Disabled)

This item is configurable only when **CSM Support** is set to **Enabled**.

### ⌵ **Storage Boot Option Control**

Allows you to select whether to enable the UEFI or legacy option ROM for the storage device controller.

- ▶▶ Disabled Disables option ROM.
- ▶▶ UEFI Only Enables UEFI option ROM only. (Default)
- ▶▶ Legacy Only Enables legacy option ROM only.

This item is configurable only when **CSM Support** is set to **Enabled**.

### ⌵ **Other PCI Device ROM Priority**

Allows you to select whether to enable the UEFI or Legacy option ROM for the PCI device controller other than the LAN, storage device, and graphics controllers.

- ▶▶ Disabled Disables option ROM.
- ▶▶ UEFI Only Enables UEFI option ROM only. (Default)
- ▶▶ Legacy Only Enables legacy option ROM only.

This item is configurable only when **CSM Support** is set to **Enabled**.

### ⌵ **Administrator Password**

Allows you to configure an administrator password. Press <Enter> on this item, type the password, and then press <Enter>. You will be requested to confirm the password. Type the password again and press <Enter>. You must enter the administrator password (or user password) at system startup and when entering BIOS Setup. Differing from the user password, the administrator password allows you to make changes to all BIOS settings.

### ↳ **User Password**

Allows you to configure a user password. Press <Enter> on this item, type the password, and then press <Enter>. You will be requested to confirm the password. Type the password again and press <Enter>. You must enter the administrator password (or user password) at system startup and when entering BIOS Setup. However, the user password only allows you to make changes to certain BIOS settings but not all. To cancel the password, press <Enter> on the password item and when requested for the password, enter the correct one first. When prompted for a new password, press <Enter> without entering any password. Press <Enter> again when prompted to confirm.

NOTE: Before setting the User Password, be sure to set the Administrator Password first.

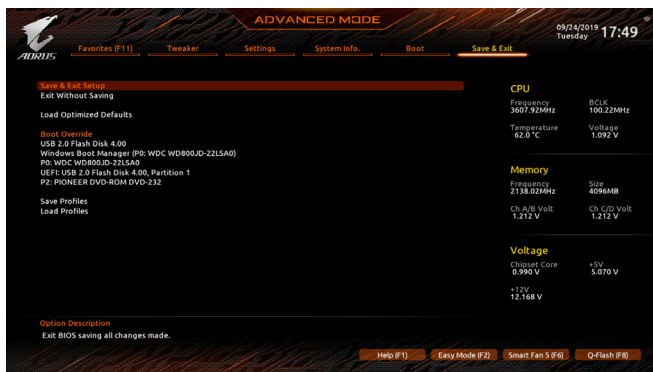

### ■ **Secure Boot**

Allows you to enable or disable Secure Boot and configure related settings. This item is configurable only when **CSM Support** is set to **Disabled**.

### ↳ **Preferred Operating Mode**

Allows you to select whether to enter Easy mode or Advanced mode after entering BIOS Setup. **Auto** enters the BIOS mode where it was last time. (Default: Auto)

## 2-8 Save & Exit

### Save & Exit Setup

Press <Enter> on this item and select **Yes**. This saves the changes to the CMOS and exits the BIOS Setup program. Select **No** or press <Esc> to return to the BIOS Setup Main Menu.

### Exit Without Saving

Press <Enter> on this item and select **Yes**. This exits the BIOS Setup without saving the changes made in BIOS Setup to the CMOS. Select **No** or press <Esc> to return to the BIOS Setup Main Menu.

### Load Optimized Defaults

Press <Enter> on this item and select **Yes** to load the optimal BIOS default settings. The BIOS defaults settings help the system to operate in optimum state. Always load the Optimized defaults after updating the BIOS or after clearing the CMOS values.

### Boot Override

Allows you to select a device to boot immediately. Press <Enter> on the device you select and select **Yes** to confirm. Your system will restart automatically and boot from that device.

### Save Profiles

This function allows you to save the current BIOS settings to a profile. You can create up to 8 profiles and save as Setup Profile 1~ Setup Profile 8. Press <Enter> to complete. Or you can select **Select File in HDD/FDD/USB** to save the profile to your storage device.

### Load Profiles

If your system becomes unstable and you have loaded the BIOS default settings, you can use this function to load the BIOS settings from a profile created before, without the hassles of reconfiguring the BIOS settings. First select the profile you wish to load and then press <Enter> to complete. You can select **Select File in HDD/FDD/USB** to input the profile previously created from your storage device or load the profile automatically created by the BIOS, such as reverting the BIOS settings to the last settings that worked properly (last known good record).

# Chapter 3 Appendix

## 3-1 Configuring a RAID Set

### RAID Levels

|                               | RAID 0  | RAID 1                     | RAID 10   |
|-------------------------------|---|----------------------------|---|
| Minimum Number of Hard Drives | ≥2  | 2                          | 4   |
| Array Capacity                | Number of hard drives *<br>Size of the smallest drive | Size of the smallest drive | (Number of hard drives/2) *<br>Size of the smallest drive |
| Fault Tolerance               | No  | Yes                        | Yes   |

#### Before you begin, please prepare the following items:

- At least two SATA hard drives or SSDs. <sup>(Note)</sup> (To ensure optimal performance, it is recommended that you use two hard drives with identical model and capacity).
- Windows setup disc.
- Motherboard driver disc.
- A USB thumb drive.

### Configuring the Onboard SATA Controller

#### A. Installing SATA hard drive(s) in your computer

Install the hard drives/SSDs in the SATA/M.2 connectors on the motherboard. Then connect the power connectors from your power supply to the hard drives.

#### B. Configuring SATA controller mode in BIOS Setup

Make sure to configure the SATA controller mode correctly in system BIOS Setup.

Steps:

Turn on your computer and press <Delete> to enter BIOS Setup during the POST (Power-On Self-Test). Under **Settings\IO Ports**, set **SATA Configuration\SATA Mode** to **RAID**. Then save the settings and restart your computer. (If you want to use NVMe PCIe SSDs to configure RAID, make sure to set **NVMe RAID mode** to **Enabled**. Then set how the bandwidth of the PCIe slot you use is divided. Save the changes and exit BIOS Setup.)

The BIOS Setup menus described in this section may differ from the exact settings for your motherboard. The actual BIOS Setup menu options you will see shall depend on the motherboard you have and the BIOS version.

(Note) An M.2 PCIe SSD cannot be used to set up a RAID set either with an M.2 SATA SSD or a SATA hard drive.

## C. UEFI RAID Configuration

Steps:

1. In BIOS Setup, go to **Boot** and set **CSM Support** to **Disabled**. Save the changes and exit BIOS Setup.
2. After the system reboot, enter BIOS Setup again. Then enter the **Settings\IO Ports\RAIDXpert2 Configuration Utility** sub-menu.
3. On the **RAIDXpert2 Configuration Utility** screen, press <Enter> on **Array Management** to enter the **Create Array** screen. Then, select a RAID level. RAID levels supported include RAID 0(Stripe), RAID 1(Mirror), and RAID 10 (the selections available depend on the number of the hard drives being installed). Next, press <Enter> on **Select Physical Disks** to enter the **Select Physical Disks** screen.
4. On the **Select Physical Disks** screen, select the hard drives to be included in the RAID array and set them to **Enabled**. Next, use the down arrow key to move to **Apply Changes** and press <Enter>. Then return to the previous screen and set the **Array Size**, **Array Size Unit**, **Read Cache Policy** and **Write Cache Policy**.
5. After setting the capacity, move to **Create Array** and press <Enter> to begin.
6. After completing, you'll be brought back to the **Array Management** screen. Under **Manage Array Properties** you can see the new RAID volume and information on RAID level, array name, array capacity, etc.

## Install the SATA RAID/AHCI driver and operating system

With the correct BIOS settings, you are ready to install the operating system.

### Installing the Operating System

As some operating systems already include RAID/AHCI driver, you do not need to install separate RAID/AHCI driver during the Windows installation process. After the operating system is installed, we recommend that you install all required drivers from the motherboard driver disc using "Xpress Install" to ensure system performance and compatibility. If the operating system to be installed requires that you provide additional SATA RAID/AHCI driver during the OS installation process, please refer to the steps below:

1. Copy the **Hw10** folder under the **\BootDrv** folder in the driver disc to your USB thumb drive.
2. Boot from the Windows setup disc and perform standard OS installation steps. When the screen requesting you to load the driver appears, select **Browse**.
3. Insert the USB thumb drive and then browse to the location of the driver. The location of the drivers is as follows:  
\\Hw10\RAID\x64
4. Select **AMD-RAID Bottom Device** first and click **Next** to load the driver. Then select **AMD-RAID Controller** and click **Next** to load the driver. Finally, continue the OS installation.

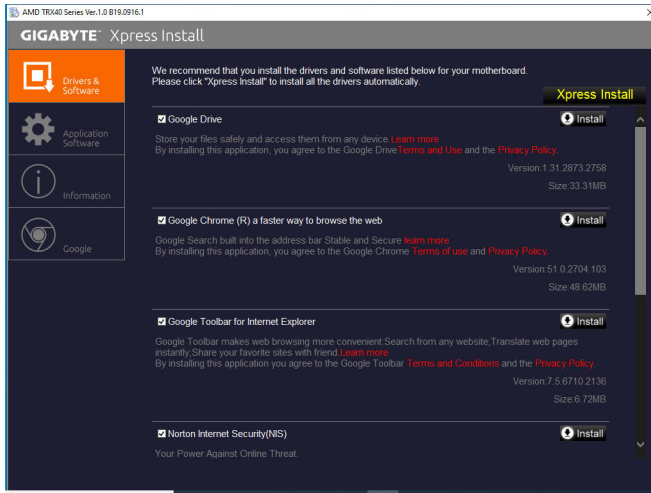

Please visit GIGABYTE's website for details on configuring a RAID array.

## 3-2 Drivers Installation

- Before installing the drivers, first install the operating system.
- After installing the operating system, insert the motherboard driver disc into your optical drive. Click on the message "Tap to choose what happens with this disc" on the top-right corner of the screen and select "Run Run.exe." (Or go to My Computer, double-click the optical drive and execute the Run.exe program.)

"Xpress Install" will automatically scan your system and then list all of the drivers that are recommended to install. You can click the **Xpress Install** button and "Xpress Install" will install all of the selected drivers. Or click the arrow  to individually install the drivers you need.

Please visit GIGABYTE's website for more software information.

Please visit GIGABYTE's website for more troubleshooting information.

# Regulatory Statements

## Regulatory Notices

This document must not be copied without our written permission, and the contents there of must not be imparted to a third party nor be used for any unauthorized purpose.

Contravention will be prosecuted. We believe that the information contained herein was accurate in all respects at the time of printing. GIGABYTE cannot, however, assume any responsibility for errors or omissions in this text. Also note that the information in this document is subject to change without notice and should not be construed as a commitment by GIGABYTE.

## Our Commitment to Preserving the Environment

In addition to high-efficiency performance, all GIGABYTE motherboards fulfill European Union regulations for RoHS (Restriction of Certain Hazardous Substances in Electrical and Electronic Equipment) and WEEE (Waste Electrical and Electronic Equipment) environmental directives, as well as most major worldwide safety requirements. To prevent releases of harmful substances into the environment and to maximize the use of our natural resources, GIGABYTE provides the following information on how you can responsibly recycle or reuse most of the materials in your "end of life" product.

## Restriction of Hazardous Substances (RoHS) Directive Statement

GIGABYTE products have not intended to add and safe from hazardous substances (Cd, Pb, Hg, Cr+6, PBDE and PBB). The parts and components have been carefully selected to meet RoHS requirement. Moreover, we at GIGABYTE are continuing our efforts to develop products that do not use internationally banned toxic chemicals.

## Waste Electrical & Electronic Equipment (WEEE) Directive Statement

GIGABYTE will fulfill the national laws as interpreted from the 2012/19/EU WEEE (Waste Electrical and Electronic Equipment) directive. The WEEE Directive specifies the treatment, collection, recycling and disposal of electric and electronic devices and their components. Under the Directive, used equipment must be marked, collected separately, and disposed of properly.

## WEEE Symbol Statement

The symbol shown below is on the product or on its packaging, which indicates that this product must not be disposed of with other waste. Instead, the device should be taken to the waste collection centers for activation of the treatment, collection, recycling and disposal procedure. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local government office, your household waste disposal service or where you purchased the product for details of environmentally safe recycling.

- When your electrical or electronic equipment is no longer useful to you, "take it back" to your local or regional waste collection administration for recycling.
- If you need further assistance in recycling, reusing in your "end of life" product, you may contact us at the Customer Care number listed in your product's user's manual and we will be glad to help you with your effort.

Finally, we suggest that you practice other environmentally friendly actions by understanding and using the energy-saving features of this product (where applicable), recycling the inner and outer packaging (including shipping containers) this product was delivered in, and by disposing of or recycling used batteries properly. With your help, we can reduce the amount of natural resources needed to produce electrical and electronic equipment, minimize the use of landfills for the disposal of "end of life" products, and generally improve our quality of life by ensuring that potentially hazardous substances are not released into the environment and are disposed of properly.

## Battery Information

European Union—Disposal and recycling information  
GIGABYTE Recycling Program (available in some regions)

This symbol indicates that this product and/or battery should not be disposed of with household waste. You must use the public collection system to return, recycle, or treat them in compliance with the local regulations.

### **FCC Notice (U.S.A. Only)**

Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. **WARNING:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates and radiates radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult a dealer or experienced TV/radio technician for help.

The user may find the following booklet prepared by the Federal Communications Commission helpful: The Interference Handbook.

This booklet is available from the U.S. Government Printing Office, Washington, D.C.20402. Stock No.004-000-00345-4

### **Notice for 5GHz**

Operations in the 5.15-5.25GHz band are restricted to indoor usage only. (For 5GHz only)

### **RF exposure statement**

The product comply with the FCC portable RF exposure limit set forth for an uncontrolled environment and are safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

### **CAUTION:**

The manufacturer is not responsible for any interference caused by unauthorized modifications and/or use of unauthorized antennas. Such changes and/or modifications not expressly approved by the party responsible for compliance of this device could void the user's authority to operate the equipment.

### **Canada-Industry Canada (IC):**

This device complies with Canadian RSS-210.

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

- (1) this device may not cause interference, and
- (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Ce dispositif est conforme à la norme CNR-210 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes:

- (1) le dispositif ne doit pas produire de brouillage préjudiciable, et
- (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

### **Notice for 5GHz:**

Caution :

- (i) the device for operation in the band 5150-5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems;
- (ii) the maximum antenna gain permitted for devices in the bands 5250-5350 MHz and 5470-5725 MHz shall comply with the e.i.r.p. limit; and
- (iii) the maximum antenna gain permitted for devices in the band 5725-5825 MHz shall comply with the e.i.r.p. limits specified for point-to-point and non point-to-point operation as appropriate.
- (iv) Users should also be advised that high-power radars are allocated as primary users (i.e. priority users) of the bands 5250-5350 MHz and 5650-5850 MHz and that these radars could cause interference and/or damage to LE-LAN devices.

### **Avertissement:**

Le guide d'utilisation des dispositifs pour réseaux locaux doit inclure des instructions précises sur les restrictions susmentionnées, notamment :

- (i) les dispositifs fonctionnant dans la bande 5 150-5 250 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;
- (ii) le gain maximal d'antenne permis pour les dispositifs utilisant les bandes 5 250-5 350 MHz et 5 470-5 725 MHz doit se conformer à la limite de p.i.r.e.;
- (iii) le gain maximal d'antenne permis (pour les dispositifs utilisant la bande 5 725-5 825 MHz) doit se conformer à la limite de p.i.r.e. spécifiée pour l'exploitation point à point et non point à point, selon le cas.
- (iv) De plus, les utilisateurs devraient aussi être avisés que les utilisateurs de radars de haute puissance sont désignés utilisateurs principaux (c.-à-d., qu'ils ont la priorité) pour les bandes 5 250-5 350 MHz et 5 650-5 850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.

### **Radiation Exposure Statement:**

The product comply with the Canada portable RF exposure limit set forth for an uncontrolled environment and are safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

### **European Community Radio Equipment Directive (RED) Compliance Statement:**

This equipment complies with all the requirements and other relevant provisions of Radio Equipment Directive 2014/53/EU.

This equipment is suitable for home and office use in all the European Community Member States and EFTA Member States.

The low band 5.15 -5.35 GHz is for indoor use only.

#### **Restrictions d'utilisation en France:**

Pour la France métropolitaine

2.400 - 2.4835 GHz (Canaux 1 à 13) autorisé en usage intérieur

2.400 - 2.454 GHz (canaux 1 à 7) autorisé en usage extérieur

Pour la Guyane et la Réunion

2.400 - 2.4835 GHz (Canaux 1 à 13) autorisé en usage intérieur

2.420 - 2.4835 GHz (canaux 5 à 13) autorisé en usage extérieur

#### **Notice for Italy:**

The use of these equipments is regulated by:

1. D.L.gs 1.8.2003, n. 259, article 104 (activity subject to general authorization) for outdoor use and article 105 (free use) for indoor use, in both cases for private use.
2. D.M. 28.5.03, for supply to public of RLAN access to networks and telecom services. L'uso degli apparati è regolamentato da:
  1. D.L.gs 1.8.2003, n. 259, articoli 104 (attività soggette ad autorizzazione generale) se utilizzati al di fuori del proprio fondo e 105 (libero uso) se utilizzati entro il proprio fondo, in entrambi i casi per uso private.
  2. D.M. 28.5.03, per la fornitura al pubblico dell'accesso R-LAN alle reti e ai servizi di telecomunicazioni.

### **Taiwan NCC Wireless Statements / 無線設備警告聲明:**

低功率電波輻射性電機管理辦法

第十二條: 經型式認證合格之低功率射頻電機, 非經許可, 公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

第十四條: 低功率射頻電機之使用不得影響飛航安全及干擾合法通信; 經發現有干擾現象時, 應立即停用, 並改善至無干擾時方得繼續使用。前項合法通信, 指依電信法規定作業之無線電通信。低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

在5.25-5.35GHz頻帶內操作之無線資訊傳輸設備, 限於室內使用。

### **Korea KCC NCC Wireless Statement:**

5,25 GHz - 5,35 GHz 대역을 사용하는 무선 장치는 실내에서만 사용하도록 제한됩니다.

### **Japan Wireless Statement:**

5.15GHz帯 ~ 5.35GHz帯: 屋内のみの使用。
