

BT8385-CTW

FLOOR-TO-WALL MOUNTING KIT

FOR USE WITH BT8385

Designed to securely install BT8385 Vertical Columns close to a wall. The BT8385-CTW is made up from two parts; a wall plate that secures the BT8385 Vertical Column to the wall and a base plate that secures the column to the floor with a minimal footprint. The brackets support substantial loads and are ideal for mounting AV installations in retail and office environments where a close to wall installation is preferred to avoid trip hazards.

SPECIFICATION

Max load	70kg
Distance from the wall to the front of column	100mm
Colour	Black

FEATURES

- For use with a **BT8385** Vertical Column
- Small footprint, ideal for retail applications where floor space is limited such as shop windows or for close to the wall displays
- Heavy duty steel capable of supporting substantial loads
- High-end aesthetic quality
- Can be used to create large scale videowall installations - ideal for applications such as control rooms
- Integrated cable management allows cables to run through the centre of the base and into the vertical column from under the floor

Close to the wall installation.

Base plate is fitted to the floor for a secure install using suitable fixings (not supplied).

Cables can be run through the centre of the base and into the vertical column from under the floor.

Can be used to create large scale installations - ideal for control rooms.
