INSTALLATION INSTRUCTIONS
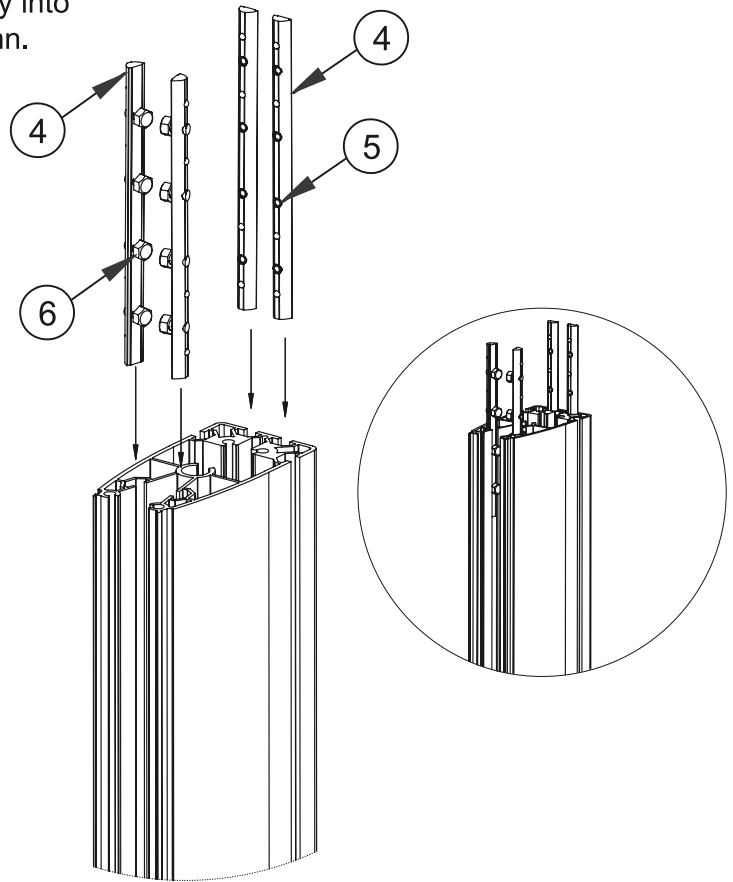

Joining Columns

1

Insert the connector bars (part 4) halfway into the non-threaded end of the lower column.

The two connector bars with grub screws (part 5) go in the front of the column and the 2 connector bars with hex bolts (part 6) go in the back.
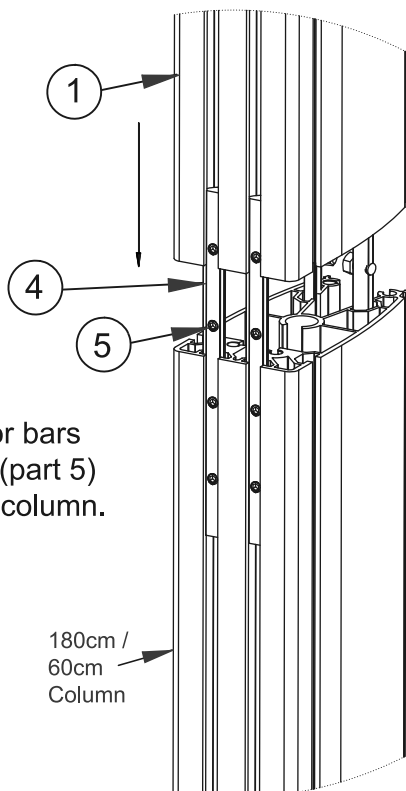

Hex Bolts (part 6) to be flush with the surface

IMPORTANT: Connector bars should be inserted into the non-threaded end of the column.

2

Join the columns together by sliding the 60cm column (part 1) onto the connector bars (part 4).

Front of Column

Back of Column

The two connector bars with grub screws (part 5) in the front of the column.

The two connector bars with hex bolts (part 6) in the rear of the column.

180cm / 60cm Column

3

Tighten all grub screws (part 5) on the front of the column using the hex key (part 7).

On rear of column tighten hex bolts (part 6) by hand. Finish tightening using a 10mm spanner.
