CN8000 KVM on the NET™ Quick Start Guide

www.aten.com

Requirements

- For best results we recommend that the computers used to access the switch have at least a P III 1 GHz processor, with their screen resolution set to 1024 x 768.
- Browsers must support 128 bit SSL encryption.
- For best results, a network transfer speed of at least 128 kbps is recommended.
- For the Windows Client AP, at least 25 MB of memory must be available after installation.
- For the Java Client API, the latest version of Sun's Java Runtime Environment (JRE) must be installed, and at least 55 MB of memory must be available after installation.
- For the browser-based WinClient Viewer, and at least 60 MB of memory must be available after installation.
- For the browser-based Java Applet Viewer the latest version of Sun's Java Runtime Environment (JRE) must be installed, and at least 130 MB of memory must be available after installation.
- For the Log Server, you must have the Microsoft Jet OLEDB 4.0 or higher driver installed.

Cables

- Two custom KVM cable sets (1 USB, 1 PS/2) to link the CN8000 to a server or KVM switch are provided with this package.
- One custom Console cable set to link the CN8000 to a local console is provided with this package.
- Note:** This cable set has been designed to operate with either PS/2 or USB consoles.
- A USB 2.0 cable for use with the Virtual Media function is provided with package.
- Cat 5e or higher Ethernet cable (not provided with this package), should be used to connect the CN8000 to the LAN, WAN, or Internet.

Virtual Media Support

WinClient ActiveX Viewer / WinClient AP

- IDE CDROM/DVD-ROM Drives – Read Only
- IDE Hard Drives – Read Only
- USB CDROM/DVD-ROM Drives – Read Only
- USB Hard Drives – Read/Write*
- USB Flash Drives – Read/Write*
- USB Floppy Drives – Read/Write*
- The disk drives can be mounted either as Drives or Removable Disks. Mounting them as removable disks allow booting the remote server if the disk contains a bootable OS. In addition, if the disk contains more than one partition, the remote server can access all the partitions.

Guide de démarrage rapide pour le CN8000 KVM on the NET™

www.aten.com

Configuration minimale

- Pour des résultats optimaux, il est conseillé que les ordinateurs accédant au commutateur disposent au minimum d'un processeur P III de 1 GHz et d'une résolution d'écran de 1024 x 768.
- Les navigateurs doivent prendre en charge le cryptage SSL 128 bits.
- Pour les meilleurs résultats, une vitesse de transfert réseau d'au moins 128 kbps/s est recommandée.
- Pour l'application cliente Windows, au moins 25 Mo de mémoire doivent être disponibles après l'installation.
- Pour l'application cliente Java, la dernière version de l'environnement d'exécution Java (JRE) de Sun doit être installée et au moins 55 Mo de mémoire doivent être disponibles après l'installation.
- Pour la visionneuse WinClient utilisant le navigateur, au moins 60 Mo de mémoire doivent être disponibles après l'installation.
- Pour la visionneuse d'applet Java utilisant le navigateur, la dernière version de l'environnement d'exécution Java (JRE) de Sun doit être installée et au moins 130 Mo de mémoire doivent être disponibles après l'installation.
- Le Log Server nécessite le pilote Microsoft Jet OLEDB 4.0 ou une version ultérieure.

Câbles

- Deux jeux de câbles personnalisés KVM (1 USB, 1 PS/2) permettant de relier le CN8000 à un serveur ou à un commutateur KVM sont fournis avec l'appareil.
- Ce produit est livré avec un jeu de câbles console personnalisés permettant de relier le CN8000 à un terminal.
- Remarque:** Ce jeu de câbles a été conçu pour être utilisé avec des consoles PS/2 ou USB.
- Un câble USB 2.0 est également fourni pour la fonction de disques virtuels.
- Utilisez un câble Ethernet de catégorie 5e ou supérieure (non fourni) pour connecter le CN8000 au réseau LAN, WAN ou Internet.

Supports virtuels pris en charge

Visionneuse ActiveX Viewer / Application WinClient

- Lecteurs de CD-ROM/DVD-ROM IDE – Lecture seule
- Disques durs IDE – Lecture seule
- Lecteurs de CD-ROM/DVD-ROM USB – Lecture seule
- USB Hard Drives – Read/Write*
- Lecteurs flash USB – Lecture/écriture*
- Lecteurs de disquettes USB – Lecture/écriture*
- Ces lecteurs peuvent être installés soit en tant que lecteurs soit en tant que disques amovibles. Le fait de les monter en tant que disques amovibles permet de démarrer le serveur distant si le disque contient un système d'exploitation amorçable. De plus, si le

Voraussetzungen

- Um optimale Ergebnisse zu erzielen, sollten die Computer, von denen Sie auf den Switch zugreifen möchten, mindestens einen P III-Prozessor mit 1 GHz besitzen und eine Bildschirmauflösung von 1024 x 768 unterstützen.
- Der Web-Browser muss eine SSL-Verschlüsselung mit 128 Bit unterstützen.
- Wählen Sie eine Internet-Verbindung von mindestens 128 kbps.
- Für den Windows-Client müssen mindestens 25 MB Speicher nach der Installation verfügbar sein.
- Für den Java-Client müssen Sun Java Runtime Environment (JRE) installiert und mindestens 55 MB Speicher nach der Installation verfügbar sein.
- Für den Browser-gesteuerten WinClient-Viewer müssen mindestens 60 MB Speicher nach der Installation verfügbar sein.
- Für den Browser-gesteuerten Java-Applet-Viewer müssen Sun Java Runtime Environment (JRE) installiert und mindestens 130 MB Speicher nach der Installation verfügbar sein.
- Für den Zugriff auf den Protokoll-Server muss der Microsoft Jet OLEDB 4.0 oder eine ältere Version des Kabels eingesetzt werden.

Virtual-Media-Unterstützung

WinClient ActiveX-Viewer / WinClient-Anwendung

- IDE-CDROM/DVD-ROM-Laufwerke – nur Lesezugriff
- IDE-Festplattenlaufwerke – nur Lesezugriff
- USB-CDROM/DVD-ROM-Laufwerke – nur Lesezugriff
- USB-Festplattenlaufwerke – Lese-/Schreibzugriff*
- USB-Flash-Laufwerke – Lese-/Schreibzugriff*
- USB-Diskettenlaufwerke – Lese-/Schreibzugriff*
- Sie können diese Laufwerke entweder als gewöhnliche Laufwerke oder als Wechseldatenträger einrichten. Wenn Sie sie als Wechseldatenträger einrichten, können Sie den Server der Gegenstelle davon booten, wenn sie ein bootfähiges Betriebssystem enthalten. Falls die der Datenträger außerdem mehrere Partitionen enthält, kann der entfernte Server auf alle Partitionen zugreifen.

CN8000 KVM on the NET™ Guía rápida

www.aten.com

Requisitos

- Para obtener los mejores resultados, se recomienda que los ordenadores que acceden al conmutador tengan como mínimo un procesador P III a 1 GHz y una resolución de pantalla de 1024 x 768.
- El navegador debe admitir el cifrado SSL de 128 bits.
- Para una descarga más eficaz se recomienda una conexión a Internet de por lo menos 128 Kbps.
- Para la aplicación cliente para Windows, deben quedar por lo menos 25 MB libres después de la instalación.
- Para la aplicación cliente para Java se requiere la última versión de Sun Java Runtime Environment (JRE); después de la instalación deben quedar por lo menos 55 MB libres.
- Para el visor WinClient Viewer para navegador Web deben quedar por lo menos 60 MB libres después de la instalación.
- Para el visor Java Applet Viewer para navegador Web se requiere la última versión de Sun Java Runtime Environment (JRE), y después de la instalación deben quedar por lo menos 130 MB libres.
- Para el Servidor de protocolo se requiere el controlador Microsoft Jet OLEDB 4.0 o una versión posterior.

Cables

- Dos juegos de cables personalizados KVM (1 USB, 1 PS/2) que permiten conectar el CN8000 a un servidor o a un conmutador KVM vienen incluidos con la unidad.
- Este producto viene con un juego de cables de consola personalizado para conectar el CN8000 a un terminal local.
- Nota:** Este cable ha sido diseñado para un uso con consolas PS/2 o USB.
- Un cable USB 2.0 para la función de discos virtuales también está incluido.
- Use un cable de Ethernet de categoría 5e o superior (no incluido) para conectar el CN8000 a la red LAN, WAN o Internet.

Soportes virtuales admitidos

WinClient ActiveX Viewer / aplicación WinClient

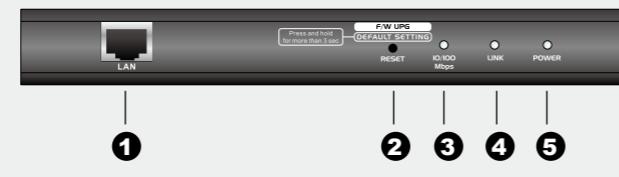

- Unidades de CDROM/DVD-ROM IDE – sólo lectura
- Discos duros IDE – sólo lectura
- Unidades de CDROM/DVD-ROM USB – sólo lectura
- Discos duros USB – sólo lectura/escritura*
- Discos flash USB – lectura/escritura*
- Discos extraíbles
- Estas unidades pueden montarse bien como unidades de disco o como discos extraíbles. Si los monta como discos extraíbles, podrá arrancar el servidor remoto si el disco contiene

Browser Operation

To operate the CN8000 from an Internet browser, begin by logging in:

- Open your browser and specify the IP address of the CN8000 you want to access in the browser's URL location bar.

Note: 1. For security purposes, a login string may have been set by the administrator. If so, you must include a forward slash and the login string along with the IP address when you log in. For example: 192.168.0.100/CN8000 If you don't know the IP address or login string, ask your administrator.

2. The CN8000 default setting is for DHCP if it fails to find a DHCP server, after one minute it uses its default IP Address: 192.168.0.60.

2. A Security Alert dialog box appears. Accept the certificate – it can be trusted. If a second certificate appears, accept it as well.

3. Provide a valid Username and Password (set by the CN8000 administrator), then click Login to continue.

Note: 1. If you are the administrator; and are logging in for the first time, use the default Username: **administrator**; and the default Password: **password**. For security purposes, we strongly recommend you remove these and give yourself a unique Username and Password.

2. If you supplied an invalid login, the authentication routine will return this message: Invalid Username or Password. Please try again. If you see this message, log in again being careful with the Username and Password.

4. After you have successfully logged in, the CN8000 Main Screen appears.

Mouse Setup

If you use a PS/2 custom KVM cable to connect to the server, perform the following mouse setting procedures.

Windows Systems:

Note: You must use the generic mouse driver supplied with Windows.

• XP / Server 2003 – middle position; Enhance pointer precision: off

• 2000 / ME – Mouse motion: middle position; Acceleration: off

• NT / 98 / 95 – Mouse speed: slowest

Sun / Linux Systems:

Open a terminal session and issue the following command:

• Sun: xset m 1

• Linux: xset m 0 or xset m1 (if one doesn't work try the other.)

CN8000 KVM on the NET™ - Guida rapida

Requisiti

- Per i migliori risultati, i computer che accedono allo switch devono avere almeno un processore P III 1 GHz, con la risoluzione dello schermo impostata su 1024x768.
- I browser devono supportare la codifica SSL a 128 bit.
- Per i migliori risultati, si consiglia una velocità di trasferimento di rete di almeno 128 kbps.
- Windows Client AP, dopo l'installazione devono essere disponibili almeno 125 MB di memoria.
- Per il Java Client AP, deve essere installata la versione più recente di Java Runtime Environment (JRE) di Sun e dopo l'installazione devono essere disponibili almeno 55 MB di memoria.
- Per il Java Client Viewer, basato sul browser, dopo l'installazione devono essere disponibili almeno 60 MB di memoria.
- Per il Java Applet Viewer, basato sul browser, deve essere installata la versione più recente di Java Runtime Environment (JRE) di Sun e dopo l'installazione devono essere disponibili almeno 130 MB di memoria.
- Per il Log Server è necessario che sia installato il driver Microsoft Jet OLEDB 4.0 o superiore.

Cavi

- A questa confezione sono inclusi due set di cavi KVM personalizzati (1 USB e 1 PS/2) per collegare il CN8000 a un server o a uno switch KVM.
- La confezione contiene anche un cavo per la console per collegare il CN8000 a una console locale.

Note: Questo cavo è stato progettato per funzionare con console sia PS2 sia USB.

Per la funzione Virtual Media con questa confezione viene fornito un cavo USB 2.0.

Il cavo Ethernet Cat.5e o superiore (non contenuto nella confezione) deve essere utilizzato per collegare il CN8000 alla LAN, la WAN o a internet.
