

4K HDMI Audio De-Embedder/Extractor with TOSLINK, RCA and 3.5 mm Stereo Output, 5.1 Channel, HDCP 2.2, 4K 60 Hz

MODEL NUMBER: P130-000-AUDIO2

Separates the audio track from an HDMI audio/video signal and sends it to a receiver, speakers or other audio system with no HDMI input.

Features

Sends HDMI Audio to a Non-HDMI Receiver or Sound Bar

This audio de-embedder and extractor separates the audio track from an HDMI audio/video source device (such as an Apple TV, Amazon Fire Stick, Blu-ray player, video game system or media server) and transmits it to a receiver, speakers, sound bar, amplifier or other audio system with digital or analog audio input. This allows you to continue using your current audio equipment without making an expensive upgrade to something with HDMI input.

Versatile Audio Options to Meet Your Device's Specifications

The P130-000-AUDIO2 features 3.5 mm stereo analog, TOSLINK digital optical and RCA digital coaxial audio outputs to match most non-HDMI receivers and audio systems. It supports 2-channel stereo and multi-channel audio up to 5.1 surround sound, as well as uncompressed audio, such as LPCM, and compressed audio formats, including DTS and Dolby Digital. An LED indicates when the unit is receiving power or transmitting an A/V signal.

Transmits 4K @ 60 Hz Video Resolutions

The P130-000-AUDIO2 also transmits the accompanying 4K video signal to a 4K television, projector or monitor. It supports Ultra HD resolutions up to 3840 x 2160 at 60 Hz, as well as 36-bit True Color (12 bits per channel) at 4K 60 Hz and 3D formats up to 600 MHz. HDCP 2.2 compliance allows you to stream 4K Amazon and Netflix content with no complications.
