ABYSM

GAMING

ARCLIGHT 2.0 ARGB WHITE

The ARCLIGHT 2.0 ARGB fans are the latest innovation in PC fans. This pack of three fans comes with the latest ARGB lighting technology, which means that each LED can be individually controlled to produce a wide variety of lighting effects and colors.

One of the most innovative features of the ARCLIGHT 2.0 fans is the ability to daisy chain them to save cables and make installation easier. This means that all three fans can be connected to a single fan header on the motherboard, reducing the number of cables needed in the system.

* ARGB function is supported by ARGB controller and motherboards with supported software.
