DESCRIPTION

ATGBICS® Compatible 160-9700-900-C Transceiver is a very compact 32Gb/s optical transceiver module for serial optical communication applications at 32Gb/s. The 160-9700-900-C converts a 32Gb/s serial electrical data stream to 32Gb/s optical output signal and a 32Gb/s optical input signal to 32Gb/s serial electrical data streams. The high speed 32Gb/s electrical interface is fully compliant with SFI specification.

The high performance 850nm VCSEL transmitter and high sensitivity PIN receiver provide superior performance for Ethernet applications at up to 100m links.

The SFP28 Module is compliant with SFF-8431, SFF-8432 and IEEE 802.3ae 32GBASE-SW. Digital diagnostics functions are available via a 2-wire serial interface, as specified in SFF-8472.

The fully SFP compliant form factor provides hot pluggability, easy optical port upgrades and low EMI emission.

SFP Module EEPROM Information and Management

The SFP modules implement the 2-wire serial communication protocol as defined in the SFP -8472. The serial ID information of the SFP modules and Digital Diagnostic Monitor parameters can be accessed through the I²C interface at address A0h and A2h. The memory is mapped in Table 1. Detailed ID information (A0h) is listed in Table 2. And the DOM specification at address A2h. For more details of the memory map and byte definitions, please refer to the SFF-8472, “Digital Diagnostic Monitoring Interface for Optical Transceivers”. The DOM parameters have been internally calibrated.
