Open rack systems are cabinet solutions that do not require a closed cabinet structure and are used for numerous applications in the field of network, server, storage and electronics in clean and dust-free environments. It creates a professional look while being functional. It is easy to maintain.

Economic Solution
Open rack is preferred with its more economical and easy-to-assemble structure compared to the closed cabinet structure. Thanks to its smart design, it can be used as a single or double.

19" Profile Construction
Thanks to the special profile structure designed for the installation of all 19" standard devices, side obstacles are completely eliminated. The strong carrier profile structure with 7 twists provides maximum durability. It provides safe transportation up to 600 kg when the load distribution is done properly.

Ground Contact
Thanks to its fixation to the ground and the use of pinion feet and wheels, it is compatible with any required floor configuration. Standard models can be fixed to the floor, as well as optionally available with pinion feet and wheels.

Easy Access
Thanks to the open structure of all surfaces, easy and fast access to the equipment is provided and can be combined side by side.
