Coffee Enjoyment

# LATTESELECT

## INDIVIDUAL COFFEE VARIETY – ENJOYMENT AT A SINGLE TOUCH.

The Melitta® LatteSelect stands for coffee variety and individuality at the touch of a button. Simply touch the real-image sensor fields to start preparation of your favourite coffee speciality according to an original recipe. Individuality is ensured by the twelve preset coffee recipes, the option of setting and saving personal recipes for up to six people and the manual two-chamber bean container – coffee expertise that you can taste.

### AWARD-WINNING COFFEE ENJOYMENT:

#### Pre-infusion function

Our brewing process ensures optimum development of the coffee flavour and therefore excellent coffee enjoyment. Thanks to the pre-infusion function, the freshly ground coffee powder is dampened briefly before the actual brewing process, i.e. before the coffee is brewed with a perfectly adjusted contact time between the water and coffee.

#### Intense Aroma function

For an even more intense flavour, you can select the IntenseAroma function instead of the standard brewing profile without having to change the coffee or water quantity.

#### Twelve coffee recipes – original preparation

The four classics, espresso, café crème, cappuccino and latte macchiato, are selected directly with a single, light touch on the real-image touch sensor buttons. You can select eight other coffee variations such as flat white, long black and americano via the menu.

#### Italian Preparation Process

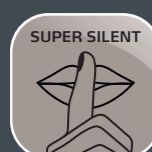

The "Italian Preparation Process" ensures a particularly authentic taste as the ingredients are combined in the right order using an original Italian recipe. This means that, for latte macchiato, the espresso is added after the milk and the milk froth. For cappuccino, it is exactly the opposite.

### INTUITIVE OPERATION:

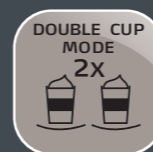

#### Simple one-touch operation

You can choose and customise selected coffee variations like espresso, café crème, cappuccino and latte macchiato with just one touch of the sensor fields – if necessary, even while they are being dispensed. You can also dispense hot milk, milk froth and hot water simply and conveniently with one touch. The step-by-step instructions on the high-resolution colour display and the photo-realistic videos during coffee preparation ensure simple and intuitive operation.

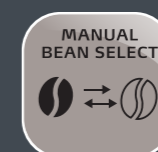

#### Ultra-quiet grinder

Low-noise top technology: the steel conical burr grinder in this automatic coffeemaker grinds the coffee beans particularly quietly. Your conversations will no longer be interrupted and you will not wake anyone up when you prepare your coffee in the morning either. For quiet coffee enjoyment at any time you want.

#### Double Cup function

The "Double Cup" function allows you to prepare two cups of numerous coffee specialities at the same time – with or without milk – and enjoy them in company.

#### Manual Bean Select

The "Manual Bean Select" function allows you to choose between two different bean varieties. The integrated ground coffee chute also allows you to use ready ground coffee.\*

#### Height-adjustable all-in-one outlet

The separate nozzles in the outlet for coffee, milk and hot water allow simple preparation of a wide range of beverages. Very simply at the push of a button and without moving the cup. Glasses and large cups also fit under the height-adjustable outlet.

### INDIVIDUAL FLAVOUR:

#### Recipes for six people

This automatic coffeemaker allows you to save custom recipes for up to six people. This means that you will not have to set your personal coffee preferences each time you dispense a beverage.

#### Individual brewing strength and grinding fineness

In addition to the brewing strength (four settings) and the grinding fineness (five settings), you can also adjust the temperature and coffee quantity to your individual taste.

#### Tea function

For all tea lovers, the ideal brewing temperatures for white, green, black or herbal/fruit teas are preset in these automatic coffeemakers and can also be prepared very simply with a single touch of a button.

### SIMPLE CLEANING:

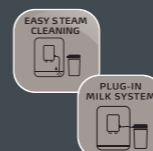

#### Auto Clean & Descaling function

The display tells you when cleaning or descaling is necessary, and guides you through the process with simple step-by-step instructions.

#### Removable brewing unit

The brewing unit is simple to remove so you can also clean the interior easily.

#### Easy Steam Cleaning function and plug-in milk system

The "Easy Steam Cleaning" function allows you to clean all milk system parts quickly and hygienically with hot water and steam after beverages are dispensed. Furthermore, you can simply remove them for even more intensive cleaning. The supplied milk container can be kept in the refrigerator and cleaned in the dishwasher.

\* Note: coffee from the previous variety may be left over in the milk system after you manually switch the coffee beans and should not be left unused. Therefore, the complete switch to the new type will take up to two to three cups – depending on the brewing strength setting.
