

# Data Sheet PRIMERGY RX2530 M7 Rack Server

# Maximum productivity in a 1U housing

Fujitsu offers a fantastic blend of systems, solutions and expertise to guarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. PRIMERGY servers deliver workload-optimized x86 industry standard systems for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers, versatile rack-mount servers, density-optimized multi-node servers as well as GPU servers purpose-built for the demands of AI and VDI. While all these systems are designed to handle multiple workloads, each server is optimized for specific use cases. Whatever the size of your business - large enterprise with multiple sites, or a small or medium-sized company with limited space and budget – with the right choice of server, your IT can become the business enabler you have always wanted it to be.

## PRIMERGY RX2530 M7

The PRIMERGY RX2530 M7 server in a dense 1U chassis is based on a dual-socket x86 platform providing an ideal combination of performance and scalability for most data centers. The PRIMERGY RX2530 M7 is ideal for AI workloads, HPC infrastructures, virtualization, databases as well as scale-out scenarios. It supports the latest 4th or 5th generation Intel® Xeon® Scalable Processors with up to 60 / 64 cores in a standard socket and four UPI 2.0 links resulting in a performance improvement of more than 40% compared to the previous generation processors. The integration of Compute Express Link (CXL) supports 4x 16 devices and provides a large amount of memory capacity 8TB (DDR5) with 32 DIMM slots delivering once more excellent results for even the most demanding applications and workloads. The new DDR5 DIMM modules provide fast memory for intensive workloads such as data analytics and in-memory databases. Get a broad choice for storage flexibility with up to 4x 3.5"

SAS/SATA, up to 10x 2.5" SAS/SATA/NVMe storage devices. In addition, two further 2.5" storage devices are available as an option on the rear of the chassis. The PRIMERGY RX2530 M7 supports the new PCIe 5.0 interface and SAS 24G for upcoming devices. A total of three such interfaces are available. It also provides two onboard LAN adapters via OCP v3. With Platform Firmware Resilience (PFR) functionality, as one example of integrated security for all servers and proven reliability help to provide a maximum uptime in enterprise data centers. Optionally available is a front locking bezel to avoid unauthorized physical access directly in the data center. All new and optimized security features should help to secure sensitive workloads and enable new opportunities to unleash the power of data. With the Fujitsu Infrastructure Manager (ISM) as well as the integrated next generation Remote Management Controller (iRMC S6), even more complex workloads and administration tasks are simplified for transparent management of your server and the IT infrastructure so you can focus on your business objectives. With the now available short chassis version,

please be aware that configuration options are

different for the short depth model.

# Features & Benefits

## Main Features

#### OPTIMIZED PERFORMANCE AND DENSITY

■ Wide choice of different available types of 4th or 5th Generation Intel® Xeon® Scalable processors. Each processor offers up to 60 / 64 cores (depending on SKU), 16 memory channels, up to 4 Intel® Ultra Path Interconnect (UPI 2.0 at 16 GT/s) and PCI-Express 5.0 with up to 80 lanes (per socket) enabling a significantly higher performance and efficiency.

## **POWER YOUR APPLICATIONS**

32 memory slots in total supporting 8 TB memory with DDR5 DIMM modules (@ 4,800 MT/s @5,600 MT/s) for improved workload performance.

#### **EASY EXPANDABILITY**

Our server systems are built to scale easily to be able to adapt to a variety of applications and meet future demands. PRIMERGY RX2530 M7 comes with adapters via OCP v3 as well as flexible PCIe riser cards with support for up to 3x PCIe 5.0 / 1x PCIe 4.0 (dedicated for internal RAID Controller) slots. Different available base units with 4x 3.5-inch SAS/SATA, up to 8x/10x 2.5-inch SAS/ SATA/NVMe support provide enormous expandability.

#### COMPREHENSIVE PROTECTION

PRIMERGY servers are equipped with beneficial features to protect against, detect and recover from security breaches (PFR, UEFI Secure Boot, TPM 2.0, signed firmware updates, agent-free device management, secure authorization and authentication, alerting and logging, secure Out of Band Management with iRMC S6, ...).

# AGILE INFRASTRUCTURE MANAGEMENT

■ Infrastructure Manager (ISM) provides seamless, holistic management ensuring that IT infrastructures retain the dynamic flexibility required to support ever-changing business demands. Two versions of ISM are available. ISM Advanced is a powerful, fully featured version offering comprehensive infrastructure management capabilities such as support for multiple hardware configurations, physical and virtual network connection indicators and firmware baseline updates. A free entry-level version, ISM Essential, provides essential monitoring and firmware update of all supported devices, including servers, storage and network switches.

#### Benefits

- Ideal dual-socket platform for dense scale-out data center computing powered by latest 4th or 5th Generation Intel® Xeon® Scalable Processors with up to 60 / 64 cores per CPU.
- Combine performance and versatility to adapt to a variety of applications and meet future demands with 32 DIMM modules and up to 8TB of memory. DDR5 DIMM memory provides fast, high capacity for memory intensive workloads.
- Benefit from the flexibility of 2.5", 3.5" storage devices for highest capacities with up to 10 drives per height unit (U) and additional expandability with up to 3 PCIe 5.0 /1x PCIe 4.0 (for Internal RAID controller) slots flexible adapters via OCP v3.
- Benefit from advanced security technologies such as Platform Firmware Resilience (PFR) to protect the most sensitive portions of a workload, encryption support to enhance data and VM protection as well as physical protection to avoid unauthorized access.
- Infrastructure Manager (ISM) enables organizations to have centralized control over the infrastructure that includes servers, storage, networking management software as well as power and cooling using a single user interface.

Compatibility	If and to the extent a list of components or certain compatibilities are specified in the product data sheet, these component lists and compatibility specifications are exhaustive. Using deviating or other system components and applications together with the product may but does not necessarily have to lead to compatibility problems. A fina statement and/or commitment on the compatibility of such deviating or other system components and application can only be provided after a corresponding verification through a dedicated compatibility testing.

Notes	
Continuity management	The product may in connection with and depending on the specific configuration include elements to support time- and performance-critical applications, however high availability (e.g., 99.9999%) and failsafe performance is not a standalone product feature. If and to the extent the product is to be used in such business-critical environments, it is within the sole responsibility of the user to set up the specific additional technical features (e.g., Storage Cluster), redundancies, and operational conditions as required to ensure such high availability or failsafe performance.
Security	The properties of the product provide a baseline for product security and therefore end-customer IT security. However, these properties are not sufficient on their own to protect the product from all existing threats, such as intrusion attempts, data exfiltration and other forms of cyberattacks. To customize security settings, please use the configuration options as available for the respective product. During operation, the IT security of this product is within the responsibility of the respective administrator/end-user of the product. Please note, that Fujitsu as a manufacturer does not make any policy prescriptions or advocacy statements regarding IT security best practices and/or general product operation.
