⚠ WARNING!

Warning – general danger

⊙ ConnectLife

Connect your oven to a Wi-Fi network and the ConnectLife app to access all its functions, including advanced features and remote control.

IMPORTANT SAFETY PRECAUTIONS – CAREFULLY READ THE INSTRUCTIONS AND SAVE THEM FOR FUTURE REFERENCE.

The appliance may only be connected to the power mains by an authorized service technician or expert. Tampering with the appliance or nonprofessional repair thereof may result in risk of severe injury or damage to the product.

Appliance must be connected to fixed wiring which has incorporated means of disconnection. Fixed wiring must be made in accordance with the wiring rules.

For the UK market, fixed wiring is required if the device has more than 3 kW. Only the service department should connect the appliance.

For stationary appliances permanently connected to the fixed wiring, compliance with this requirement is deemed to be met if the disconnection instruction incorporated into the fixed wiring complies with AS/NZS 3000 (Australia only).

The appliance must not be installed behind a decorative door in order to avoid overheating.

WARNING: A damaged power cord or connector must only be replaced by the manufacturer, an authorized service technician, or a qualified professional. Improper handling may result in electric shock, fire, or serious injury.

This appliance can be used by children aged 8 years and above, and by persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge, if they have been given supervision or instruction concerning the use of the appliance in a safe way, and if they understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be done by children without supervision.

WARNING: The appliance and its accessible parts become hot during use; avoid contact with heating elements. Children under 8 years of age must be kept away unless continuously supervised.

The appliance is not intended to be controlled by external timers or separate remote control system.

Only use the food probe recommended for use in this oven.

Do not use harsh abrasive cleaners or sharp metal scrapers to clean the oven door glass/ the glass of hinged lids of the hob (as appropriate), since they can scratch the surface, which may result in shattering of the glass.

Do not use steam cleaners or high-pressure cleaners to clean the appliance as this may result in an electric shock.

WARNING: Before replacing the light bulb, make sure the appliance has been disconnected from the mains power, in order to prevent the hazard of an electric shock.

Never pour water directly on the bottom of the oven cavity. Temperature differences could result in damage to the enamel coating.

Other important safety warnings

The appliance is intended for household use. Do not use it for any other purpose, such as room heating, drying of pets or other animals, paper, fabrics, herbs etc. As this may lead to injury or fire hazard.

The appliance may only be connected to the power mains by an authorized service technician or expert. Tampering with the appliance or nonprofessional repair thereof may result in risk of severe injury or damage to the product.

We recommend that (due to appliance weight) at least two persons carry and install the appliance.

Do not lift the appliance by holding it by the door handle.

Oven door hinges may be damaged when under excessive load. Do not stand or sit on the open oven door, and do not lean against it. Also, do not place any heavy objects onto the oven door.

If the power cords of other appliances located in the vicinity of the oven become entangled in the oven door, they may get damaged, which may cause a short circuit. Therefore, make sure that the power cords of other appliances are at a safe distance.

Make sure the vents are never covered or obstructed in any other way.

Do not line the oven walls with aluminium foil and do not place baking trays or other containers on the bottom of the oven. This would reduce air circulation in the oven, obstruct and slow down the baking process and destroy the enamel coating.

We recommend you avoid opening the oven door during baking, as this increases power consumption and condensate accumulation.

At the end of the baking process, and during baking, be careful when opening the oven door, as there is danger of scalding.

To prevent limescale accumulation, leave the oven door open after baking or using the oven, to allow the oven cavity to cool down to room temperature.

Clean the oven when it has completely cooled down.

Eventual mismatches in colour shades between different appliances or components within a single design line may occur due to various factors, such as different angles under which the appliances are observed, different coloured backgrounds, materials, and room illumination.

Do not use the appliance if it is damaged. Unplug the appliance from the power mains and call an authorized service centre.

The oven can be safely used with or without baking pan guides.

Do not store items in the oven, which could cause danger when the oven is switched on.

Before connecting the appliance to the power mains, leave it at room temperature for some time to allow all components to adapt to room temperature. If the oven was stored at a temperature close to freezing point or below it, this could be hazardous to some components, particularly the pump.

Do not operate the appliance in an environment colder than 5 °C. If the appliance is switched on in such conditions, the pump could be damaged.

Do not use distilled water, tap water with high chlorine content, or other similar liquids.

When baking with steam injection, always fully open the oven door when the baking process is completed. If you do not do so, the steam rising from the oven cavity could affect the operation of the control unit.

Peel off the adhesive tape from the control unit after installing the appliance into the cabinet. Failure to do so may result in a tank failure.

⚠ WARNING!

Carefully read the instructions for use before connecting the appliance. Repair or any warranty claim resulting from incorrect connection or use of the appliance shall not be covered by the warranty.

⊂⊃ **Connect**Life

Connecting the appliance to the ConnectLife application

ConnectLife is a smart home platform that connects people, devices and services. The **Connect**Life application includes advanced digital services and carefree solutions that allow users to monitor and control appliances, receive notifications from a smartphone, and update software (supported features may vary depending on your appliance and the region/country in which you are located).

To connect your smart device, you need a home Wi-Fi network (only 2.4 GHz networks are supported) and a smartphone equipped with the application **Connect**Life.

⊂⊃ **Connect**Life

To download the **Connect**Life, application, scan the QR code or search for **Connect**Life in your favourite app store.

1. Install the **Connect**Life application and create an account.
2. In the **Connect**Life application, go to the "Add device" menu and select the appropriate type of device. Then scan the QR code (it can be found on the nameplate of the appliance; you can also enter the AUID/MV number manually).
3. The application then guides you through the entire process of connecting the appliance to your smartphone.
4. After a successful connection, the appliance can be operated remotely via the mobile application.

⁻ᵧ̣⁻ INFORMATION!

If this setting is not available, then your oven is not fitted with a Wi-Fi module and does not support internet connectivity.

When the Wi-Fi module is enabled and connections are successfully set up and synchronized, then the oven can be controlled and operated via a mobile device and the **Connect**Life app.

The Wi-Fi connection works in the same frequency range as some other devices (e.g. microwave ovens and remote-controlled toys). Consequently, temporary or permanent disruption of the connection is possible. In such cases, the availability of the offered functions cannot be guaranteed.

Ensuring the quality of the functions offered depends heavily on the signal strength. If the router is far away from the appliance, there may be problems with the reliability of the connection.

🔆 INFORMATION!

All settings are controlled by the keys.
For better key responsiveness, touch them with a large area of your fingertip. Each time you press a key, this will be acknowledged by an acoustic signal (when this function is available).

First step	Intermediate step	Passed time (exp. oven is operational)	Optional step

1.	Remove oven utensils and any packaging (cardboard, polystyrene foam, plastic) from the oven.
2.	Wipe the utensils, the inside of the oven and the tank container with a damp cloth. Do not use rough cloths or cleaners.
3.	Switch on the oven (see chapter *Switching on for the first time*).

NOTE: During heating, the characteristic "new smell" is released, so ventilate the room thoroughly during this time.

Switching on for the first time

After connecting the appliance to the mains for the first time or after a prolonged power outage, you will need to set the language, time and hardness of the water.

·ᶉ· INFORMATION!

If you do not want to set this, touch ✓ . The default settings will be saved. You can change the settings at any time (see chapter *General settings*).

1.	**Setting the language:** The display shows the default language (English). By pressing ❬ or ❭ you can change the language. Confirm with ✓ .
2.	**Setting the exact time:** By pressing ❬ or ❭ you can set the exact time of day. Set the hours and minutes separately. Confirm your selection with ✓ .
3.	**Setting the water hardness:** By pressing ❬ or ❭ you can set the water hardness. Confirm your selection with ✓ .
4.	**Calibration with the food probe** The calibration procedure ensures the accuracy of the temperature measurement, as it automatically eliminates any deviations (with a maximum of ±1 °C). As part of the process, a heating process is also carried out, which removes the residues of the production process and any unpleasant odours through a special heating programme at high temperature. This way, the unpleasant smells will not be transferred to the food prepared in the oven.

All initial settings are set and the appliance is in standby mode.

Before first use

Water hardness
(depending on the model)

Cleaning of the steam system depends on both frequency of baking with steam injection and on the hardness of the water used.
The hardness of the water must be adjusted before the first use. If the water is softer or harder than the default setting, you can change the set hardness level.

1.	Soak the test paper strip (supplied with the appliance) in water for one second. Wait one minute, then note the number of bars on the paper strip. The level setting corresponds to the number of coloured bars on the paper strip (see table).
2.	Compare the test strip with the image on the display.

Water hardness	Value (°N)	Amount of water to be decalcified	Number of coloured bars
very soft	0-3 dH	30	4 green bars
soft	3-7 dH	25	1 red bar
medium hard	7-14 dH	22	2 red bars
hard	14-21 dH	20	3 red bars
very hard	21 dH	18	4 red bars

You can also adjust the water hardness in the Settings menu (see chapter *General settings*).

Calibration with the food probe
(depending on the model)

During the calibration process, the food probe allows accurate measurement of the temperature at the centre of the oven (+/-1°C).
1.	Remove any loose accessories from the oven. Place the wire rack to the third position.
2.	Place the probe in the centre of the rack, with the tip facing the back of the oven.
3.	Unscrew the socket cover (only on some models) on the front in the upper righthand corner of the oven and plug the probe into the socket.
4.	The total calibration process lasts for 4 hours. Do not open the oven door during calibration.
5.	A sound signal is emitted, the calibration is complete. The probe can be switched off and safely put away.

The total calibration time is up to 4 hours. In the event that you decide to skip the procedure, the device will not send further pop-up notifications about performing the procedure. Calibration can be done at any time in the settings menu.

NOTE: During the heating process, unpleasant odours or the characteristic "new smell" may come from the oven. Thoroughly ventilate the room throughout the duration of the programme.

Symbol	Use
▬ ▬ ⌃₊	**BOTTOM + TOP HEATER + STEAM** For conventional cooking on a single rack, making soufflés, and cooking at low temperatures (slow cooking). Use the addition of steam if you want the surface of the food to cook more and create more crispness. We recommend using preheating, except for dishes that are marked differently in the spreadsheet.
⊗ ⌃₊	**HOT AIR + STEAM** Hot air allows for better air circulation around the dish. In this way, it dries its surface more and creates a thicker crust. For roasting meat, baking cakes, cooking vegetables and for drying food on one or more racks at the same time. Use the addition of steam if you want the surface of the food to cook more and create more crispness.
⊗	**HOT AIR + BOTTOM HEATER** Perfect for making pizza and pastries with a higher water content. For cooking on one level when you want your dishes cooked and crisp as quickly as possible.
⊼	**BOTTOM + TOP HEATER + FAN** For even cooking of dishes on one level and making souffles. We recommend using preheating, except for dishes that are marked differently in the spreadsheet.

Symbol	Use
〰〰	**LARGE GRILL** For cooking large quantities of flat foods, such as toasted bread, canapees, grill sausages, steaks, fish, skewers, as well as for gratinating and achieving a nice crispy crust. The heaters mounted on the top of the oven cavity heat the entire surface evenly. **Low level** - suitable for cooking fish fillets, whole fish, frying cheese. **Medium level** - suitable for cooking small pieces of meat, fish cutlets, vegetables, canapees, skewers. **High level** - suitable for cooking steaks, burgers, grill sausages, toast and cooking au gratin.
	LARGE GRILL + FAN + STEAM For roasting poultry and grilling large pieces of meat. Use the addition of steam if you want the surface of the food to cook more and create more crispness.
•••	**MORE SYSTEMS** Confirm your selection with ✓ . Additional systems will be displayed.
	STEAM It is used for cooking all kinds of vegetables, small pieces of meat, fruits and side dishes (rice, pasta).
	SOUS VIDE It is a process of slow cooking in a vacuum, at a precisely defined and maintained temperature. Sous vide is suitable for preparing meat, fish and vegetables. The food prepared in this way is juicy and develops a fuller taste.
	LARGE GRILL + BOTTOM HEATER For faster cooking of dishes on one level and for a crispy pastry crust.
	BOTTOM HEATER + GRILL For gentle and controlled slow cooking of delicate food (soft cuts of meat) and baking pastry with a crunchy bottom.
	BOTTOM HEATER + GRILL + FAN For optimal preparation of yeast-leavened bakery products and all types of bread and for preservation.
	LARGE GRILL + BOTTOM HEATER + HOT AIR For dishes where even crispiness from all sides is desirable. The function is also suitable as a first step of multi-step roasting of meat, as it allows for quick searing of the surface in the initial phase and slow roasting in the second phase. The meat will be juicy and the crust nicely browned.
	AIR FRY This cooking method gives the food a crispy crust, without added fat. It is a healthy version of "fast food" with a lower calorie content. Suitable for small cuts of meat, fish, vegetables and pre-cooked frozen products (French fries, chicken medallions, etc.). For best results, we recommend placing your food in a cold oven. If the oven is preheated, set the temperature up to 20 °C higher than indicated on the food packaging.

Symbol	Use
	ECO HOT AIR [1] For gentle, slow and even cooking of meat, fish and pastries on one level. This way of cooking retains a higher proportion of water in the meat, which leaves it juicier and softer, while the pastry becomes evenly browned/baked. The used temperature range is between 140 °C and 220 °C.

Cooking with steam

Cooking with steam is a healthy way to prepare food that preserves the full taste of food. It also does not produce any unpleasant smells. There is no need to salt the water or add herbs and spices.

The food does not require any added grease. Steam preserves the taste of food, does not add odours, the taste of the grill or the taste of the dish or baking tray. It also does not take away the flavours, as they do not dissolve in water. The steam does not spread taste or smell, so you can cook meat, fish or vegetables together. The steam is also suitable for blanching, defrosting and reheating and for keeping your food warm.

When cooking with steam, there are 2 systems available; full steam and sous vide.

Symbol	Use
	STEAM It is used for cooking all kinds of vegetables, small pieces of meat, fruits and side dishes (rice, pasta) - cooking at **100 °C**
	SOUS VIDE It is a process of slow cooking in a vacuum, at a precisely defined and maintained temperature. Sous vide is suitable for preparing meat, fish and vegetables. The food prepared in this way is juicy and develops a fuller taste. Season the food and pack it in a dedicated plastic bag that is suitable for vacuuming and cooking. Place the packaged food on a perforated baking tray and place on the middle level of the oven - cooking at **45 °C - 95 °C**

1.	Switch on the appliance ⏻ .
2.	By pressing < or > find the system and press ✓ to select it.
3.	With the sous vide system, you can use the following keys < > to set the desired temperature between 45-95 °C. With the steam system, the temperature is preset at 100 °C and cannot be changed.
4.	Press ▷❙❙ and fill the water tank (see chapter Filling the water tank below).
5.	To start cooking, touch ✓ .

Addition of steam

The addition of steam roasts the food surface more and creates greater crispness.

Just the right amount of steam created during this process cooks the surface of the food better and improves its crispness, while the inside of the food remains soft and fluffy. It is recommended to use the steam addition system when baking goods such as bread, fresh rolls, sponge rolls and cakes, and when cooking small pieces of poultry and vegetables.

1.	Switch on the appliance ⏻ .
2.	By pressing ‹ or › you select the system.
	▬ Top heater + Bottom heater
	⊛ Hot air
	≋ Large grill + Fan
	The display shows the partially illuminated symbol ⌢+ . Touch the key to add steam during cooking.
	The addition of steam is only possible with the above three systems.
3.	By pressing ‹ or › you select the steam intensity level and steam operating time.
	Low level - suitable for cooking large pieces of meat, raising dough, fish.
	Medium level - suitable for baking fresh buns, sponge cakes, soufflés and cooking poultry.
	High level - suitable for baking bread.
	For cooking fish, baking bread and cakes and cooking chicken we recommend adding steam in the initial phase of cooking, in the first 10-15 minutes.
	Set the duration of the steam addition - from 30 min to 2 hours (depending on the model).
	Confirm your selection with ✓ .
	The symbol ⌢+ lights up fully, which means that the steam addition is successfully activated.
4.	Fill the water tank (see chapter Filling the water tank).
5.	To start cooking, touch ▷‖ .

💡 INFORMATION!

The addition of steam can also be switched on or off during the cooking process.

Filling the water tank
The water tank allows for independent feeding of water into the oven. The volume of the tank is approximately 1.3 l.
1.	Remove the water tank from the housing by pressing on the door.
2.	Open the cover. Clean the tank with water. Assemble the tank and pour in fresh water.
3.	Push the tank back into the housing to the end position.

NOTE: After cooking, the remaining water in the steam system is pumped into the water tank. The cover and the water tank can be cleaned with conventional liquid cleaners that do not contain abrasives.

The table below shows the levels marked on the water tank and the approximate water consumption for one cycle for different choices of systems with the addition of steam. If water in the water tank runs out, top it up.

Level	30 min
	Level 1
	Level 2
	Level 2

⚠ WARNING!

If you do not observe the MAX indicator and pour too much water into the tank, excess water might spill onto the ground through the gap between the tank cover and the tank.

The water that is poured into the tank must have a room temperature of about 20 °C (+/– 10 °C). Do not use distilled water, tap water with high chlorine content, or other similar liquids. Use only fresh tap water, softened water or non-carbonated mineral water.

Programme	Use
AIR FRY	Frying food with hot air, without added fat. Faster and healthier version of "fast food". This cooking method gives the food a crispy crust, without added fat. It is a healthy version of "fast food" with a lower calorie content. NOTE: For optimal results, use an Airfry grid tray, which allows hot air to circulate evenly around the food.
PROOFING	The dough will rise faster and more evenly without drying out the surface. While the dough is rising, do not open the door.
DEHYDRATE	With the help of air, you reduce the amount of moisture in the food and thus prolong its durability.
DEFROST	It is used for slow defrosting of frozen food (cakes, pastries, breads and rolls and deep-frozen fruit). Halfway through the defrosting time, turn the food pieces over and separate them if they have been frozen on top of each other.
REGENERATE	This mode allows you to gently reheat ready-made dishes with hot air and steam. Steam prevents food from drying out by preserving the juiciness, taste and texture of the food.
KEEP WARM	It is used to keep already prepared dishes warm. Do not open the door during operation.
PLATE WARMING	Useful if you want to preheat the plates or cups so that the food stays warm for a long time. You can set the temperature.
PRESERVING	The process by which we prolong the durability of the food. Use jars with a rubber sealing ring and lid. Do not use jars with threaded or metal caps or metal tins. Pour 1 litre of hot water (approximately 70 °C) into the deep tray and place 6 identical jars into the tray. Place the baking tray in the oven on the second guide.
STERILISE BOTTLES	Suitable for sterilisation of all types of bottles. Sterilisation is a process that destroys all types of microorganisms.

By pressing ▷‖ , the countdown begins. All sounds and operations are switched off except for the key ⏻ . NOTE: In case of a power outage, Sabbath mode will be deactivated and the oven will return to its initial state.

Touch 📶 . The display shows **Remote**, indicating the possibility of remote control via the ConnectLife app.

💡 INFORMATION!

For safety reasons, some functions are not available via remote access.

- If the oven is in standby mode and you open the oven door, the remote control option has to be enabled again.
- If oven door is opened during the baking process, the remote control option on the oven is disabled.
- Any user activity on the control unit will automatically disable the remote control option on the oven.
- Cancellation or completion of the baking program or process is the only option that remains available regardless of whether remote control is enabled or not.
- Remote control is disabled when using a microwave system (not applicable to combined microwave systems).

⚠ WARNING!

Always make sure the oven is used correctly and in compliance with the instructions, especially when using remote control. Do not run the oven via remote access unless you are certain about what exactly is in the oven.

General tips and advice for baking

Equipment:

- Use equipment made of heat-resistant non-reflective materials (supplied baking trays and dishes, enamel-coated cookware, tempered glass cookware). Bright-coloured materials (stainless steel or aluminium) materials reflect heat. As a result, thermal processing of food in them is less effective.
- Always insert the baking sheets and trays to the end of the guides. When baking on the wire rack, place the baking dishes or trays in the middle of the rack.
- Do not place baking trays, food, or other items on the bottom of the oven. Such use may cause permanent damage to the interior surface of the oven and negatively affect the safety and efficiency of the appliance.
- Do not cover the oven cavity bottom or the wire rack with aluminium foil.
- Always place the baking dishes onto the wire rack.
- If you are using parchment paper, make sure it is resistant to high-temperatures. Always trim it accordingly. Parchment paper prevents the food from sticking to the baking tray and makes it easier to remove the food from the baking tray.
- When cooking directly on the wire rack, insert the all-purpose baking tray one level lower to serve as a drip tray.

Food preparation:

- For optimum food preparation, we recommend observing the guidelines specified in the cooking table. Choose the lower specified temperature and the shortest specified cooking time. When this time expires, check the results and then adjust the settings as necessary.
- When cooking according to recipes from older cookbooks, use the bottom and top heater system (as in conventional ovens) and set the temperature 10 °C lower than specified in the recipe.
- When cooking larger cuts of meat or pastry with higher water content, a lot of steam will be generated inside the oven, which in turn may condense on the oven door. This is a normal phenomenon which will not affect the operation of the appliance. After the cooking process, wipe the door and the door glass dry.

Efficient use of energy
- Preheat the oven only if indicated in the recipe or in the tables in this instruction manual. If you are using quick preheating, do not put food in the oven until the oven is fully heated, unless otherwise recommended. When heating an empty oven, a lot of energy is consumed, so if possible, we recommend that you prepare several dishes in a row or several dishes at the same time.
- Remove all unnecessary equipment from the oven during baking
- Unless it is absolutely necessary, do not open the oven door during baking.
- With longer cooking programs, you can switch off the oven approximately 10 minutes before the end of cooking time to make use of the accumulated heat.
Cooking table
NOTE: Dishes marked in the table:
- one star * , stir repeatedly and turn, two stars ** , preheat the oven. In this case, do not use the quick preheat mode.

General tips and advice for baking

Cooking with a food probe (⋀FOOD PROBE)
(depending on the model)

The food probe allows for accurate monitoring of the core temperature of food during cooking.

> ⚠ **WARNING!**
>
> **The food probe should not be in direct vicinity of the heating elements.**

|	
1.	Stick the metal end of the probe into the thickest part of the food. NOTE: To start cooking with the food probe, the current cooking process must first be interrupted and then the food probe must be connected to the socket. By inserting the probe into the socket, the preset functions on the oven are deleted.
2.	Unscrew the socket cover in the upper righthand corner of the front of the oven (depending on the appliance model) and plug the probe into the socket. By pressing ⟨ or ⟩ select automatic or manual setting.
3.	- In manual mode, the symbol ⋀ will appear next to the system on the display unit, together with the preset cooking temperature (in the temperature range up to 210 °C), which can be changed. Also determine the core temperature of the food (in the temperature range from 30 to 99 °C). The use of manual mode is shown in the picture above. - In automatic mode, touch ⟨ or ⟩ to select the dish. The recipes have a predetermined system, temperature and cooking time. You can change the degree of browning NOTE: When using the probe, setting the cooking time is not possible.
4.	Confirm the setting by touching ▷❚❚ . During cooking, the set temperature and current temperature of the foodstuff are alternated on the display. If desired, you can change the cooking temperature or the desired core temperature of the foodstuff during operation.
5.	When the set core temperature is reached, the oven will stop operating. The display will show **Cooking complete**. An acoustic signal will be heard which you may turn off with any key. After one minute, the acoustic signal will be switched off automatically.

> 💡 **INFORMATION!**
>
> The use of a food probe enables automatic cooking selection mode.
Correct use of the probe, by type of food:

- poultry: stick the probe in the thickest part of the breast;
- red meat: stick the probe into a lean part that is not marbled with fat;
- smaller chunks with bone: stick them into an area along the bone;
- fish: stick the probe behind the head, towards the spine.
> ⚠ **WARNING!**
>
> **After use, carefully remove the probe from the food and socket, clean it, and tighten the socket cover.**

⚠ WARNING!

Be sure to unplug the appliance from the power supply and wait for the appliance to cool down.

Children should not clean the appliance or perform maintenance tasks without proper supervision.

- For easier cleaning, oven cavity and baking tray are coated with special enamel for a smooth and resistant surface.
- Regularly clean the appliance and use warm water and hand dishwashing liquid to remove larger impurities and limescale. Use a clean soft cloth or sponge cloth.
- Never use aggressive or abrasive cleaners and accessories (abrasive sponges and detergents, stain and rust removers, scrapers for glass ceramic plates).
- Food residue (fat, sugar, protein) can ignite during the use of the appliance. Therefore, remove larger chunks of dirt from the oven interior and accessories before each use.
- Oven equipment is dishwasher-safe. Pull-out guides are not suitable for this type of cleaning.

Exterior of the appliance	Use hot soapy water and a soft cloth to remove impurities and wipe the surfaces dry.
Interior of the appliance	For stubborn dirt or grime, use conventional oven cleaners. After using such agents, wipe the appliance thoroughly with a wet cloth to remove any residual cleaning agents.
Utensils and guides	Clean with hot soapy water and a damp cloth. In case of persistent dirt, we recommend prior soaking and the use of a brush.

If the cleaning results are not satisfactory, repeat the cleaning process.

Cleaning with steam

This program makes it easier to remove any stains from inside the oven.
The function is the most effective if used regularly, after each use.
Before running the cleaning program, remove all large visible chunks of dirt and food residues from the oven cavity.

⚠ WARNING!

Use the STEAM CLEAN system when the oven has fully cooled down.

Cleaning and maintenance

1.	Fill the water tank.
2.	Switch on the appliance and select **...** . By touching $\langle$ or $\rangle$ select **CLEANING**. Confirm with $\checkmark$ to enter the submenu.
3.	By touching $\langle$ or $\rangle$ select **STEAM CLEAN**. Confirm with $\checkmark$
4.	The programme will run for 30 minutes. At the end of the programme, the display will show **FINISH**.
5.	When the programme is completed, wipe the stains with a wet cloth and soapy water. After cleaning, wipe the appliance thoroughly with a damp cloth to remove any residual cleaning agents. If the cleaning process is not successful (in case of particularly stubborn dirt), repeat it.

Cleaning the water tank and filter foam

⚠ WARNING!

Clean the filter foam every time you clean the water tank and descale it.
1.	Remove the water tank from the housing by pressing on the door.
2.	Open the cover. Clean the tank with water.
3.	The cover and the water tank can be cleaned with conventional liquid cleaners that do not contain abrasives. WARNING: The tank is not dishwasher-safe.

Table continued from last page

4.	Clean the inlet pipe with the filter foam under running water. Rinse the foam clean so that there is no visible dirt on it. After cleaning, push the tank back into the housing to the end position.

Cleaning the steam system
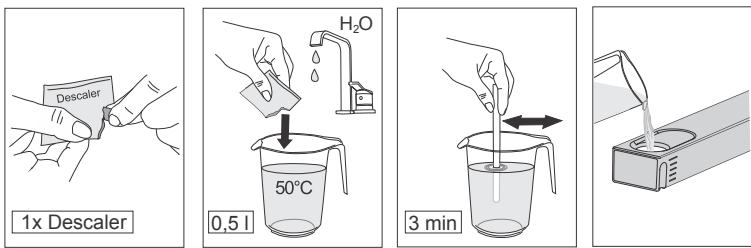

Cleaning depends on both frequency of cooking with steam injection and on the hardness of the water used.

You can carry out the procedure yourself, otherwise the display will alert you.

Regular descaling is absolutely necessary, otherwise the device may stop working; in addition, it prolongs the life of the appliance and improves the cooking results.

☀ INFORMATION!

If you do not want to perform the cleaning of the steam system when the oven prompts you to, you can interrupt this by touching ⤺ . Cleaning can be cancelled up to three times, then the oven disables the steam function until the procedure is carried out.

	Descaling agent Prepare it by mixing the supplied descaler with 0.5 l of warm water (at about 50 °C). Dissolve the descaler in water by stirring. Pour the prepared descaling agent into the tank.
H_2O	**Fresh water**

Cleaning and maintenance
1.	Switch on the appliance and select **...** . By touching $\langle$ or $\rangle$ select **CLEANING**. Confirm with $\checkmark$ to enter the submenu.
2.	By touching $\langle$ or $\rangle$ select **DESCALING**. Confirm with $\checkmark$.
3.	Fill the tank with 0.5 l of descaler. Confirm with $\checkmark$. Descaling in progress.
4.	When the process is completed, the display again shows that the descaling process has been completed. Pour fresh rinse water into the tank. Confirm with $\checkmark$.
5.	After the rinsing process is completed, the display shows that the rinsing process has been completed. Now you can clean the water tank and oven.

⚠ WARNING!

Only use the supplied descaler to ensure optimum efficiency and long life of the appliance. One pouch is enough for one cleaning process. You can purchase it through the service department or in the maintainlife.com online store. The use of other products does not guarantee complete cleaning, which may adversely affect the steam function and shorten the service life of the appliance.

Removing wire and fixed pull-out (extendible) guides
Use conventional cleaning products to clean the guides.
1.	Use a screwdriver to remove the screw (you can also use a suitable coin that fits the indentation in the screw head).
2.	Remove the guides from the holes in the back wall.

After cleaning, re-tighten the screws on the guides with a screwdriver. When replacing the guides, make sure you mount them on the same side they were installed on prior to removal.
-ϙ̈- INFORMATION!

When removing the guides, take care not to damage the enamel coating.

Removing and replacing the oven door and glass panes

1.	When replacing the oven door, first **open the door fully.**
2.	Oven door is attached to the hinges with special supports that also include safety levers. Move the safety lever towards the door at an angle of 90°. Gradually close the door to a 45° angle; then lift the door and pull it out.
3.	In order to **clean the door windows** from the inside, first remove the glass from the appliance door. Follow steps 1 to 4 for the glass removal process, leaving the door in place and not removed from the oven.

Cleaning and maintenance

Table continued from last page

4.	Remove the air guide. Hold it on the left- and right-hand side of the door with your hands and slightly pull it towards you to remove it.
5.	When removing the oven door windows, grip the top edge of the glass and remove it carefully. Repeat the same procedure for the second and, if necessary, third glass, depending on the oven model. Ensure that the process is carried out carefully and gently to prevent any damage to the windows or other parts of the oven.
6.	To replace the door glass, use the reverse order. Make sure that the glass is properly aligned and installed safely to ensure the correct operation of the oven. The internal glass panes must be correctly turned when installed. Refer to the inscription on the glass.

In case the door does not open or close properly, make sure the hinges are installed properly.

⚠ WARNING!

Always rotate both safety levers towards the support when fitting or removing the appliance door. This is crucial to prevent possible damage, as the door hinge can close with considerable force.

Soft door closing and opening
(depending on the model)

Oven door is fitted with a system that dampens the closing force and allows for easy, quiet and gentle opening and closing of the door. A gentle push to an angle of 15° (relative to the open position of the door) is enough for the door to close softly and automatically.

⚠ WARNING!

If the force applied to close the door is too strong, the effect of the system is reduced and the safety mechanism effect is decreased.

Replacing the bulb
The light bulb is a consumable and is not covered by warranty. Before changing the bulb, remove any utensils from the oven.
Halogen lamp: G9, 230 V, 25 W

The oven is fitted with a halogen lamp.
This product contains a light source of energy efficiency class (G).

⚠ WARNING!

Only replace the light bulb when the appliance is disconnected from the power supply. Be careful not to damage the enamel. Use protection to avoid burns.

1.	Undo the four screws. Remove the cover and the glass.
2.	Pull out the halogen bulb (on the left and right) and replace it with a new one.

NOTE: There is a gasket on the lid that should not be removed from the lid. The gasket must fit on the wall of the oven space.

Troubleshooting

During the warranty period, only a service center authorized by the manufacturer may carry out any repairs.

- Before making any repairs, make sure the appliance is disconnected from the power mains either by removing the fuse or by disconnecting the power plug from the wall outlet.
- Any unauthorized repairs of the appliance may result in electric shock and short circuit hazard; therefore, do not perform them. Leave such work to an expert or a service technician.
- In case of minor problems with appliance operation, check this manual to see if you can fix the problem yourself.
- If the appliance is not operating properly or at all due to inappropriate operation or handling, a visit from a service technician shall not be free of charge, even during the warranty period.
- Save the instructions for future reference and pass them on to any subsequent owners or users of the appliance.
- Following is some advice on rectifying some common problems.

Troubleshooting table

Problem/error	Cause
The main fuse in your home trips often.	Call a service technician.
The oven lighting does not work.	The process of changing the light bulb in the oven is described in the chapter Replacing the bulb.
Control unit is not responding, the screen is frozen.	Press and hold the On/Off button for 8 seconds until the screen is reset. Disconnect the appliance from the power mains for a few minutes (undo the fuse or switch off the main switch); then, reconnect the appliance and switch it on.
The display shows the error Err X. **In case of a double-digit error code, the display will show Err XX.**	There is an error in the electronic module operation. Disconnect the appliance from the power mains for a few minutes. If the error is still indicated, call a service technician.
The display shows Cooking with food probe, but the probe is not connected.	Clean the socket. Try to connect and disconnect the food probe several times in succession.
Condensate accumulation on the inner side of the glass.	This phenomenon is normal when cooking food with a large amount of liquid, e.g. potatoes, cottage cheese, etc. Allow the glass to cool down after use, then clean the remaining drops.
Steam leaks at the oven door.	Check that the door seal is properly positioned in the door groove. Install it properly in case it is not.

If the problems persist despite observing the above advice, call an authorized service technician. Repair or any warranty claim resulting from incorrect connection or use of the appliance shall not be covered by the warranty. In this case, the user will cover the cost of repair.
