

HP Device Life Extension

Extend device life with enhanced performance

Optimise IT investments and reduce your carbon impact by maximising the life of your existing devices. Extend the life of ageing devices by securely upgrading performance and addressing the most common issues that reduce employee and IT productivity.

HP Device Life Extension Service enables organisations to send PCs from their existing fleets to be optimised for performance and returned to the customer, giving devices a performance boost and allowing customers to use their devices for longer.

Customers can rest assured that their devices are upgraded with the same tested, proven HP components and expertise as their new HP products. We provide a warranty for each restored device, demonstrating our confidence and ongoing support.

MAXIMISE YOUR IT INVESTMENT

Stretch IT budgets by increasing the longevity of devices, rather than purchasing new ones. HP upgrades the performance of ageing devices,¹ enabling you to defer refresh costs without compromising work performance.

EASE THE IT WORKLOAD

Reduce the IT task load and improve computing experiences by letting HP proactively mitigate device performance issues, boost reliability and extend the support for your ageing fleet.

REDUCE THE IMPACT OF YOUR DEVICE FLEET

Contribute to organisational sustainability initiatives by maximising the usable lifespan of IT assets. Extending the lifecycle of an average PC by two years results in a 30% lower carbon footprint compared to buying a new one.²

Delivery specifications

Devices submitted for HP's Device Life Extension service undergo a thorough diagnostic and inspection process. Any supported issues identified during this process are promptly addressed as part of the service. If a component is found to be malfunctioning, the necessary remedial steps are taken to ensure optimal functionality.

DEVICE LIFE EXTENSION TUNE-UP FEATURES

Features	Delivery specifications
Deep cleaning procedure	The device's external assemblies will be fully wiped and cleaned. All contaminants such as dust, debris and residues will also be removed from internal and external assemblies. The internal heat sink attached to the motherboard will be evaluated for paste degradation. If necessary, the area will be cleaned, prepared, and the heat sink reapplied with new paste.
Component replacement and upgrade	The device's battery life will be tested and replaced if the Full Charge Capacity (FCC) is at or below 90%, with one that is above 90% FCC. The device memory will be upgraded to increase the configuration by a maximum additional memory of 8 GB, subject to the limit allowed by the device's design.
Data sanitisation	All customer data will be fully wiped from the device in accordance with the NIST 800.88 standard. To help avoid loss of data, the customer is advised to back up all data from the device before sending it for this service. HP will not be liable for the loss of such data.
Device software and re-imaging	The product will be updated with the latest compatible versions of BIOS, firmware, drivers and HP-approved platform image.
Final quality check	The device will go through a final quality check and diagnostics to ensure optimal functionality and performance before being packaged and returned to the customer.

RETURN PROCESS AND BUSINESS HOURS

Pick up and return process	Customers are expected to initiate device pick-up by contacting HP when they decide that the device is due for a DLE service. Once initiated, HP will dispatch an empty box with packaging material inside to the customer's address. When the customer receives the box, they must follow the instructions inside to ship the device to HP.
Business hours	HP standard business hours are Monday to Friday, excluding HP-observed holidays.

GEOGRAPHIC COVERAGE

Region	Countries
North America	United States, Canada
Europe	Austria, Germany, Belgium, Denmark, Finland, Luxembourg, Netherlands, Sweden, France, Italy, United Kingdom, Spain, Portugal

Service prerequisites

- HP PCs qualify for the DLE Service if the Customer has purchased a Care Pack that includes this service.
- The customer is entitled to a one-time tune up as part of the HP Device Life Extension service. Customer may contact HP and initiate this service at any time during the associated Care Pack coverage period.
- To be eligible for this service, the customer's HP device must not have reached its End of Service Life (EOSL) date.

Service limitations

These devices will not be eligible for HP Device Life Extension:

- Devices with damage not covered by a support Care Pack and that obstructs the completion of the service
- Devices that contain third party hardware components installed after purchase
- Devices with soldered-on memory are not eligible for the 8 GB memory increase
- Devices on legal hold are excluded from services until the legal hold is released or the drive is replaced.

Activities such as, but not limited to, the following are excluded from this service:

- Shipping through international customs
- All HP desktops, consumer notebooks, Chromebooks, Thin Clients and peripherals
- Setup and installation of the returned device at the customer's site
- Troubleshooting for interconnectivity or compatibility problems
- Support for network-related problems
- Devices that have been moved out of the original country of purchase

How to purchase the service

IN-WARRANTY CARE PACKS

- In-warranty Care Packs must be purchased within 90 days of device purchase
- DLE will be sold as a bundled Care Pack, requiring purchase with HP Essential Support, HP Premium Support or HP Premium+ Support
- The support term will be either four or five years

POST-WARRANTY CARE PACKS

- Post Warranty Care Packs can be purchased within 90 days before or up to 30 days after the existing coverage expires
- Limited to the type of Care Pack purchased during the in-warranty period
- Extended coverage is limited to one additional year

System requirements

- The HP Device Life Extension service is considered complete upon HP verification that all steps have been completed, and all eligible component upgrades have been made.
- If any device repairs are performed during the tune-up service, determining what needs to be done to restore the device to optimal functionality will be at HP's sole discretion.
- Verification by HP may be accomplished by the completion of a power-on self-test, standalone diagnostic or visual verification of proper operation. At its sole discretion, HP may temporarily or permanently replace the device in order to meet the repair time commitment. At HP's sole discretion, replacement devices that are new or functionally equivalent to new in performance will be sent to HP's designated vendor in order to complete the HP Device Life Extension service. Replaced devices become the property of HP.
- This service covers eligible HP devices, including ProBooks, EliteBooks and Mobile Workstations.
- If replacement parts and components used during the tune-up service are discontinued, an upgrade path may be required. In some cases, upgrades for discontinued parts or components may result in additional charges. HP will work with the customer to recommend replacements. Not all components will have available replacements in all countries, due to local support capabilities.

- Failure to meet specified responsibilities releases HP from the obligation to deliver the described services, or may result in the customer incurring expenses at the prevailing time and material rates. Devices that have been relocated must be activated and registered (or existing HP registration adjusted) within 10 days of the change.
- The customer can check the lifetime of their supported device by visiting support.hp.com.

Customer responsibilities

- The customer is responsible for initiating the HP Device Life Extension service at their convenience.
- Upon receiving the empty box and instructions, the customer should prepare the device for shipment as follows:
 1. Customer must back up any locally stored data on the device, as data stored in the device may be lost during the data sanitisation process performed as part of the tune-up.
 2. The customer will package the device according to the instructions included in the box.
 3. The customer will return the power cable and charger with their PC, for HP to perform the quality check.
 4. The customer will drop off the packaged unit at the nearest HP-designated carrier location for return to HP.
 5. The customer is responsible for interim arrangements for their users, whose devices are sent for HP Device Life Extension service. HP will not provide loan devices or other solutions.

Care pack terms and conditions
