

Product Carbon Footprint

Lenovo V100q

Machine Types: 13GG,13GH,13GL,13GM

Device Type: Thin Client

Report Date 09/11/2025

Lenovo values our commitment to the environment. As part of that commitment, Lenovo performs a streamlined product life cycle analysis in accordance with the IEC TR 62921 standard. This analysis allows the customer to estimate the carbon footprint of their product. The carbon footprint is the total green-house gases emitted by the product over its lifespan reported as global warming potential for 100-year time horizon (GWP-100) in units of CO₂ equivalents

Estimated carbon footprint of the: **Lenovo V100q**

98 kg CO₂e
Mean Value

± 23 kg CO₂e
Standard Deviation

This estimate uses the assumptions from the table below (Based on EU use location. U.S. estimates below):

Product Weight (kg)	0.89	Product Form Factor	Tiny	Assembly Location	CN
Product Lifetime (years)	4	Yearly Typical Energy Use (kWh)	19.8	Use Location	EU

Below is a breakout of the carbon emissions of this product by both lifecycle stage (raw material extraction through product end-of-life) and greenhouse gases resulting from the manufacture of major components:

Mean (EU):	98	5th Percentile (EU):	57	Mean (US):	111
Standard Deviation (EU):	23	95th Percentile (EU):	208	Standard Deviation (US):	13
