

Statement of Volatility – Dell 27 QHD Monitor

SE2726D

⚠ CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

The SE2726D contains both volatile and non-volatile components. Volatile components erase their data immediately after power is removed from the component. Non-volatile components continue to retain their data even after power is removed from the component. The following non-volatile components are present on the SE2726D system board.

Table 1. List of non-volatile components on system board

Description	Reference designator	Volatility description	User accessible for external data	Remedial action (action necessary to erase data)
System EEPROM	U4002	Non-volatile memory, 16 KB for storage of system setting (OSD)	No	The part is installed on the Interface Board and is configured with both hardware and software-level write protection.
System Flash	U4003	Non-volatile memory, 16 MB for storage of system firmware	No	The part is installed on the Interface Board and is configured with both hardware and software-level write protection.

⚠ CAUTION: All other components on the system board lose data if power is removed from the computer. Primary power loss (unplugging the power cable and removing the battery) destroys all user data on the memory. Secondary power loss (removing the on-board coin-cell battery) destroys system data on the system configuration and time-of-day information.
