

UAC-DCC01, UPS Accessory Card Dry Contact For UPS-2100 Series

Product Images

Short Description

- Provides voltage-free dry-contact signals for programmable controller and management system.
- 5 output relay signals

- Ideal to work with server, personal computer and workstation.
- Support external alarm, fault indicator, status indicator, bypass and remote shutdown.

Description

The Relay Control Card provides a reliable dry contact interface for UPS monitoring and remote management. It delivers real-time status signals such as power failure, battery low, bypass, and UPS on, enabling external systems to react promptly to UPS conditions.

The card is equipped with multiple relay outputs and selectable normally open or normally closed contacts for flexible integration with alarm systems, building management systems, or external control devices.

Installation is simple—just insert the card into the UPS intelligent slot, and it operates automatically without additional software. Ideal for applications requiring secure and automated power event notifications.

Additional Information

Package Contents.	Screw RJ45 to DB9 cable (for RS232, P/N 720-60679-00) USER MANUAL
Color.	Black
Model Number.	UAC-DCC01
Dimensions (W x D x H).	146x60x30
Product weight (kg).	0.2
