Deimos-Ultra-OWL-Thermal 9mm Dual Sensor Camera. 384×288 thermal and 4 MP visible sensors- NDAA

Deimos-OWL-UX-614T9

The Bispectral series camera the best in both thermal and visible imaging technologies for real-time scene views for the most challenging surroundings. This means in any lighting condition—wind, rain, fog, snow—your security cameras will be able to capture the incident as it unfolds, send an alert to relevant personnel or deter intruders with sound and light, and collect detailed information to for forensic review.

Ernitec provides humanoid, vehicle detection and powerful behavior analyses (intrusion, single line crossing, double line crossing, loitering, wrong-way, enter area and leave area, people counting) for thermal cameras are based on deep learning algorithm, allowing Camera alarm accuracy and reduction of false alarms.

This bi-spectral camera focuses on infrared temperature measurement algorithms, which can intelligently detect events such as smoking, fire points, smoke and fire.

With multiple fields of view options, dual stream capabilities, and optional electric focusing lenses, these fixed cameras can be mounted on the structure you need to solve the requirements of special scenes and achieve remote monitoring objectives.
