Specifications

Related Products

- Compatible with: Ambilight TVs 2011 and later, hue Personal Lighting System

Operating System

- Minimum Requirements: Android 2.3 or iOS 4.3

Highlights

Bulb selector button

Easily choose which hue bulbs in your room do—and which don't—mirror your Ambilight TV experience. Those bulbs not selected to mirror Ambilight return to their preset colour, or can be adjusted to any colour in the hue spectrum.

Colour intensity button

Your Ambilight TV may create music with colour, but you orchestrate it. By sliding the colour intensity button from right to left, you are able to play with the colour intensity. Sliding to the left creates softer tones, while moving the slider to the right creates a more immersive experience.

Dynamic brightness slider

Set the brightness of your individual hue lamps with the swipe of a fingertip using the dynamic brightness slider. Once the chosen lamps have been selected by tapping the lamp icons that appear on your screen, you simply slide it to the left, or the right, to make the experience more or less immersive depending on your personal preference.
