Designed to allow users to work faster and more efficiently, Mirage is perfect for the production of photography and fine art and for print service providers, offering the highest print quality available in one simple, fast, great value solution.

Detailed Features

Work faster and more efficiently

Mirage makes top quality creative printing simple. All the features, tools and settings you need are at your fingertips in one intuitive, clear and professional user interface. You can start printing in seconds and minimise the risk of costly misprints due to 'user error'.

Save time with multiple images

Save time by printing as many images as you want, all at the same time. Simply choose the settings for each image and Mirage will lay them out efficiently, ensuring easy cutting and minimum waste.

No surprises

The Mirage preview window shows the exact print results. Not only will you see how images will be laid out on the paper, you will see exactly what the colours will look like in print. This 'soft proof'* means there are no surprises, you just get your project exactly as you want it.

*A well calibrated monitor and a suitable ICC profile is needed

Precise colour reproduction

Mirage supports all colour modes, even mixed modes such as RGB and CMYK in one document. Mirage is optimised for the production of photography and fine art, offering the highest possible print quality.

Mirage Stand-Alone

The "Mirage Stand-Alone" allows you to print supported files without the need for a host application. Simply drag PDF, JPEG or TIFF files or folders to the "Mirage Standalone" application and print without the need for an application such as Photoshop®, Illustrator® or InDesign®.

No limits

Mirage supports an unlimited number of printers of various sizes with just one license. There is no length limitation, meaning you can print panoramic images with ease. Mirage is compatible with Apple OSX and Microsoft Windows operating systems. Mirage offers professional printing minus the limitations.
