CyberPower

Remote Management Reference Guide

Manage, monitor and control your power protection.

CyberPower offers comprehensive network UPS management capabilities using an optional Remote Management Card (RMCARD) that can be added to Smart App UPS systems to allow for remote management and configuration of the UPS via standard web browser or network management system (NMS).

This option is especially suited towards enterprise installations where the administrator may not be on-site, remote management offers complete control, including: scheduling of UPS shutdown, startup and reboot; multiple alert notification by email, SMS, and SNMP traps; flexible event action setting; event and status records logging.

Features

- UPS Remote management and configuration, via web browser or network management system
- Alert notifications
- Supported protocols: TCP/IPv4 and v6, UDP, SNMPv1 and v3, HTTP/HTTPS, NTP, SMTP, SSL, Telnet, FTP, and more**
- 10/100Mbps Ethernet compatible**
- Automatic event notification via email, SMS text and SNMP Trap
- Upgradeable firmware on select models
- Flexible event action settings
- Auto-shut down feature prevents server and workstation data loss due to unplanned power failures
- Remote scheduling of UPS shutdown, startup and reboot
- Event and Status Records logging to record the history of UPS operations
- Quick installation and user-friendly software interface

**See specific RMCARD for support at cpsww.com
