Highlights

SafeConnect Technology

The Philips Avent Smart baby monitor app uses SafeConnect Technology to work across available networks (3G/4G/Wi-Fi). The app automatically matches bandwidth and provides you with the optimal connection to your baby. When the quality of your internet connection decreases, the app will automatically adjust its audio & video quality so that you can keep watching over your little one. In case your internet connection drops, the monitor will constantly reconnect and notifies you if your connection cannot be restored.

Secure and private connection

The connection is completely secure and private. You can invite your beloved ones to watch-in, from wherever you or they are. Up to 10 accounts in total, and with privacy mode so that you can decide if and when others can tune in. The app supports up to 10 cameras, with 3 simultaneous viewers per camera.

Wi-Fi connectivity

Both, the monitor & app need to be connected to the internet. The monitor connects to the internet via Wi-Fi, which makes the performance of the monitor directly dependent upon the performance of your Wi-Fi connection. Please make sure the Philips Avent Smart baby monitor is located in close range of the Wi-Fi router, or use Wi-Fi repeater / powerline adapter with integrated Wi-Fi to boost the Wi-Fi signal near the monitor. Your smart device can be connected to the internet either via 3G, 4G or Wi-Fi, enabling you to watch over your little one from wherever you are.

Personalized to your needs

All settings and notifications for the smart baby monitor and the app can be completely personalized, so you can choose and receive exactly the frequency and type of updates you would like. Additionally, you can set the product features how and when you would like to. Whether it for instance is the color of the nightlight, or a specific lullaby.

SCD870/26

Easy set up

The Philips Avent Smart baby monitor is incredibly easy to set up. Simply download the app and use the in-app QR code to connect the camera to your local Wi-Fi network. The app includes a first time user guide, which will support you and explain the buttons and features of the app.

Day & night vision

See and hear your baby during the day & night. The camera offers superior video and audio quality, with up to 720p HD day & night vision. Full color by day and infra red black and white by night.

Background listening

You can use the app either actively in foreground mode, or in background while using your phone or tablet for other things. In background mode, the app will have reduced power consumption but it will keep you informed when your baby starts crying. This, so you know when your baby starts crying, even when actively using a different app.

Specifications

What is included

- Smart baby monitor
- Wall mount
- Adapter

Features

- Multiple cameras: 10
- Multiple viewers: 3 simultaneously
