EMINENT & EWENT: our vision

The **technological innovation** is in continuous evolution and determines always more our everyday life and traditions. Tablet, mobile phones and PC are nowadays of common use and we would never imagine to live without them. Unfortunately sometimes more devices means more complexity. **Eminent & Ewent's** aim is to create valid solutions for making the use of technological products easy and intuitive. The solutions we offer are created after considering not only **WHAT** a specific product can do, but **HOW** people use it.

FUNCTIONALITIES AND EASE OF USE

Whenever we develop a product, we have a **specific aim**. Every single **product has to be easy to use and to install**. Therefore we verify **HOW** most users use different products in their everyday, i.e. while they are playing a movie on their media player device or while they are installing a security camera. For the configuration and installation of products we offer a simple guide. Most of our products are supported by an **installation wizard** in order to complete the operations rapidly and without problems. Our **manuals** are simple written and will guide the users step by step through the installation and use of the product. Support is provided directly from the **Ewent & Eminent multilingual support centre**. We really believe in support!

NO SURPRISES!

Without considering the amount of time invested by our **technicians** for simplifying the products' interfaces, some technologies are too complex without a proper instruction manual. All manuals supplied by **Eminent & Ewent** are not only written by technicians. They are verified and tested by costumers without any technical knowledge. This is why our manuals can be easily consulted by anyone, from system administrators to inexperienced people. The **installation guides** follow the user through all the steps required to get the maximum benefit (from the product). As we said: no surprises!

REFINED AND INNOVATIVE DESIGN!

Our products do not only follow determined **quality standards**, they are also characterized by an attractive design. No exception for packaging: all packages are designed by a **creative team**. You can easily distinguish the category of an **Eminent & Ewent** product by its packaging colour. Design and image are important factors for increasing the selling of a product and we believe in the importance of **promotional materials**. Because of that, when it comes to the presentation and promotion of the Eminent & Ewent brand we offer all the support to our sellers. Do not hesitate to ask us for help!

5-year warranty | multilingual user manual | simple installation | accessible helpdesk

Your partner for reliable and
complete connectivity solutions

PREFACE

The Ewent team has created this brand new product guide for helping its customers dealing with the wide offer of cables. This brief guide acts as a useful tool for better visualizing and selecting the perfect solution based on all possible needs.

OUR VALUE PROPOSITIONS

The Ewent cable portfolio has been considerably expanded to include most connectivity solutions to meet your individual needs and requirements.

This catalogue gives you an overview of our range of cables, divided into various cable groups - networking, audio/video, USB, power and data.

Thanks to the high material quality and the rigorous tests applied to all our products, we feel confident about our work and sure of providing our customers the best in terms of quality, efficiency and design. Our self-confidence leads us to apply a warranty of 5 years to all here included products.

A competent multilingual support team is also available for all your questions. For contact details please refer to the support section of our website: www.ewent-online.com

Our international presence combined with local sales teams allow us to deliver a customized service to all our partners. Logistic hubs in Europe and Asia provide a just in time delivery offering a concrete competitive advantage.

The EWENT Team

Item Number Structure

You can identify the cable type by the item number. In the following drawing we explain how!

Packaging

For your shop Ewent offers different expositive solutions to better suits your need and improve the product visibility. Therefore, we designed two different packaging solutions between which customers can freely choose depending on their necessity.

POLYBAG

In conformance with the Ewent style, our polybags have been designed with an eye-catching style. The sturdiness of the material and the reclosable pressure closure allow a secure storage of your goods and a durable reuse of the bags in a dust-protected environment. Thanks to the Euro hole, it is ideally suited also for blister panels.

BLISTER

The Ewent blister packages have been designed with high quality materials and an unique design for better highlighting the products. This package solution provides to each single product not only a more high-quality viewing but increases also its visibility and sellability in the store.

HDMI

- HDMI 1.3b
- HDMI 1.4
- HDMI/DisplayPort Converters

HDMI Type A plug

HDMI Type A jack

DisplayPort plug

Mini DisplayPort plug

The HDMI (High-Definition Multimedia Interface) is a compact interface for transferring audiovisual data with a video resolution of 1080p and audio performances with no equals.

Since its creation, the HDMI has gone through many changes, but the HDMI cables and its connector remained unchanged in order to ensure the compatibility with older devices. The latest versions support advanced features such as Ethernet connectivity and 3D.

Version 1.3. Increases the data transmission frequency to 340 MHz and the transmission capacity to 10.2 Gbs/s. This leads to an increase of the colour depth and to the support of Dolby True HD and DTS-HD Master Audio.

Version 1.4. This new release provides support to video with an much higher definition than high resolution. It supports the 3840x2160 4K Ultra HD resolution with a refresh rate of 24Hz, 25Hz or 30Hz). This release adds the HDMI Ethernet Channel (HEC), the Ethernet connection that allows data exchange and the sharing of the Internet connectivity between two connected HDMI devices.

With the increase of audio-video devices available on the market also increases the variety of cables. Nowadays there are two large families of video connections: Analog and Digital.

VGA / XGA (Analog) In the last years, many LCD and Plasma TVs have been equipped with this type of connection. Thanks to this cable you can connect almost all computers to your TV with the great advantage of projecting images into a screen whose sizes are greater than the sizes of average desktop monitors. The VGA is quite susceptible to degradation. For this reason we offer only shielded or double-shielded VGA cables.

DVI (Digital) The main features of this cables is that it brings a digital signal and can transmit audio. The DVI-I cables are hybrids since they support both the digital and analogue signals. Using an adapter it is possible to connect the cable to a VGA input. This solution is the most versatile.

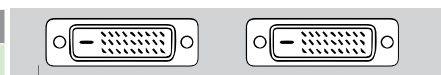

We offer the Dual Link technology which supports a higher resolution (2560x1600) than Single Link. In addition to the higher resolution, the Dual Link provides also an increased colour depth and a refresh rate of 120hz. Dual Link cables are backward compatible with Single Link connections.

For your music entertainment Ewent offers you many options in order to meet everybody's needs.

There are several scenarios where you are going to need a specific audio cable.

For example if you want to listen to your MP3 music player while driving your car, you can plug the device directly to your AUX input car stereo and play music right off the player.

This method is even better for transmitting music wirelessly, since a direct input from the MP3 player to the AUX input provides best quality in sound without distortions.

If you want to connect more speakers to your source or if you want to share music with friends while listening to it with headphones, there is a solution for this too.

You can use Ewent Y-Splitter cable and double the audio jacks.

A part from the most common RCA audio cables, used for connecting analog devices to your TVs or music centre, the arrival of digital recordings implies the need of specialized cables for carrying high-bandwidth digital audio signals.

Ewent offers a high-quality and high-performance digital cable (also known as fiber-optic and Toslink) that transmits audio signals as pulses of light impervious to interferences.

(2.0) Mini USB B jack

USB is designed to allow many peripherals to be connected using a single standardized interface. It provides an expandable, fast, bi-directional, low-cost, hot-pluggable Plug and Play serial hardware interface that makes the life of the computer users easier allowing them to plug different peripheral devices into a USB port and have them automatically configured and ready to use.

Ewent provides you a wide range of 2.0 and 3.0 USB cable, in order to meet all your needs.

USB 3.0 benefits With the always wider use of hard disk, mobile devices and with the drastical increase of file sizes, the new USB 3.0 standard has become the best solution for reducing transfer, charging and backup times.

The new standard offers a 10 times faster transfer speed than its predecessor, the USB 2.0.

One of its more important features is the backward compatibility with all USB 2.0 devices, but in order to reach the maximum promised speed USB 3.0 cables should be connected to 3.0 devices. All USB 3.0 plugs and jacks can be easily recognized thanks to their inner blue coloration.

PATCH

- 6 S-FTP
- 6 U-UTP
- 5e F-UTP
- 5e U-UTP

Patch cables are cables used to connect network devices for signal routing. Ewent provides highly reliable and durable patch cables of category 6 and 5e for your high performance networking applications, network adapters, switches, hubs, routers, DSL/cable modems and patch panels.

Cat5e is backward compatible with Cat5, while Cat6 is backward compatible with both Cat5 and Cat5e adding more performance gains over the previous standard. Ewent makes it simple to distinguish the two categories using two different colorations for the cable connector, blue for cat. 5e and red for cat. 6.

The push-pull connector allows to easily remove the connector without breaking it or any of its parts. Patch cables are available in many different colours in order to make it easier to organize them and distinguish them for their purpose.

Cat. 6 U-UTP Patch Cable

CCA, AWG 24/7

Not Shielded

Ewent solutions for supplying power to your computer are many and differ for length, plugs and jacks. Power plugs have not been unified yet and all states still have their own national plug and jack system. Ewent offers the most commonly used power cords with IEC C13/C7/C5 jacks at one end and Schuko plug, Europlug and Italian plug at the other.

Moreover it offers also power cords with 90° angled plugs or jacks meeting all space requirements.

Your computer storage capacity is low and you want to expand it by installing a new internal hard disk. For supplying power to new PC components like hard disks, cd/dvd drivers or video and audio cards you need to connect them to internal PC power supply cables.

Ewent offers a variety of specialized solutions designed to meet specific needs, such as powering a SATA hard drive from Molex connector on your power supply.

MOBILE DEVICES

- Smartphone • Tablet • Ebook
- Gps • Bluetooth Earphones

USB A jack

(2.0) Micro USB B plug

USB A jack

USB A jack

Smartphones and Tablets are nowadays our main work, travel and life companions.

All these devices find their application in our everyday since we use them for reading emails, books, newspapers, do researches, stay in touch with friends, watch or capture videos and images, show us the way as navigators and much more.

Such an intensive use leads to an high battery consumption followed by the desperate search of the charging cable. Having spare cables is always a good idea, since cables like these can be used not only for phones but also for Bluetooth, Gps devices, ebooks, Mp3 players and above all not only for charging purposes, but also for data transfer.

Cables are not all alike. They do not only differ by their connection plugs but also by quality. Bad-manufactured cables can irreversibly damage your devices.

Ewent tests all its products rigorously and offers high-quality and high-performance cables for all Smartphones and Tablets.

DATA

- SATA Cables

SATA (7-pin) connector L-type

Sata cables connects the motherboard with any Serial ATA device, including hard drives, CD ROMs, CDRWs, DVDs, tape devices, high capacity removable devices and Zip drives.

Serial ATA delivers two significant benefits: it supports much higher data transfer rates (up to 6.0 Gbps) and the narrow cable design helps improve internal air flow. Perfect for the desktop or server that has multiple drives.

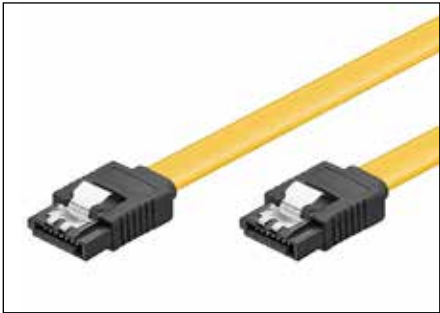

Ewent cables feature 7-pin female latching connectors and offer easy, secure installation.

For reducing the chances of SATA cable disconnection due to vibration or accidental cable nudging, Ewent SATA cables are Lock-equipped.

Lockable SATA cable connectors compared to traditional SATA cables provide a better and firmer connection with the on-board SATA ports. This prevents data corruption while hard drive or optical-drives are still functioning.

Professional BLISTERS for your Store

Choose Ewent high quality blisters for your retail business.
The blisters have been designed with great care to details:

- The transparent front and white background show the product as it is and allows to easily see and prove the high quality of the manufacture;
- The front label displays the most important information (product name and application) plus the three big icons refer to the main product features;
- The 5 year warranty logo is centered at the bottom in good sight.

Nothing is left to the case! The exhibition of well-ordered blisters ensures the best visibility and organization of cables and adapters. Ewent offers on demand a well-studied and customized plan in order to arrange the Ewent products taking advantage of all the available space and highlighting each single item.
