Data Sheet FUJITSU Server PRIMERGY RX2540 M2 Dual socket 2U rack server

The data center standard without compromise

FUJITSU Server PRIMERGY will give you the servers you need to power any workload and changing business requirements. As business processes expand so does the need for applications. Each has its own resource footprint, so you need a way to optimize your computing to better serve your users. PRIMERGY systems will help you match your computing capabilities to your business priorities with our complete portfolio of expandable PRIMERGY tower servers for remote and branch offices, versatile rack-mount servers, compact and scalable blade systems, as well as hyper-converged scale-out servers. They convince by business proven quality with a wide range of innovations, highest efficiency cutting operational cost and complexity, provide more agility in daily operations, and integrate seamlessly to let help you concentrate on core business functions.

FUJITSU Server PRIMERGY RX rack systems are versatile rack-optimized servers providing bestin-class performance and energy efficiency, and thus form the "standard" in each data center. PRIMERGY RX servers deliver more than 20 years of development and production know-how resulting in extremely low failure rates below market average, and lead to continuous operations and outstanding hardware availability.

PRIMERGY RX2540 M2

The FUJITSU Server PRIMERGY RX2540 M2 sets higher standards for usability, scalability and costefficiency. It is a 2U dual-socket rack server ideal for running enterprise applications, collaboration and messaging workloads as well as traditional databases. Plus, it substantially simplifies carrying out infrastructure-related tasks like server virtualization and consolidation. As one of the key innovations, versatile performance is guaranteed by a new generation of processors. The PRIMERGY RX2540 M2 can be equipped with two of the latest Intel® Xeon® E5-2600 v4 processors with up to 44 cores. Along with new DDR4 memory technology with up to 1.5 TB it boosts application performance to be able to cope with the increasing data growth and shortens time to business results. The modular design of the server offers excellent expandability with up to 24 disk drives, high storage density, DynamicLoM technology, up to 8 PCIe Gen 3 I/O expansion slots. The DynamicLoM technology offers users the ability to individually adapt the current server network as well as the ability to change and thus meet future requirements without giving the server infrastructure a general overhaul. The PRIMERGY RX2540 M2 comes with two redundant hot-plug power supply units, offering up to 96% energy efficiency. The Cool-safe® Advanced Thermal Design allows for operation in ambient temperatures of up to 40 °C/104 °F, optionally even up to 45°C/113°F. Both these features in line help to reduce operational expenses.

Features & Benefits

Main Features

Versatile Performance to cope with data growth

- Intel[®] Xeon[®] E5-2600 v4 product family with up to 22 cores per CPU
- Up to 1536 GB DDR4 memory and up to 8 PCIe slots
- Expanded scalability of up to 24x 2.5-inch + 4 additional rear option 2.5-inch HDD or up to 12x 3.5-inch storage drives

Increased Energy Efficiency

- Fujitsu's Cool-safe[®] Advanced Thermal Design technology for a higher ambient temperature
- Redundant power supply units with 96% energy efficiency

Foundation for Trust and Security

- Fujitsu ServerView Suite including tools for installation and deployment, permanent status monitoring and control
- BIOS, firmware and selected software are updated free of charge

Innovations simplifying management and freeing up IT resources

- DynamicLoM to select the network connector of your choice -"plug&play-design" with 3 different port types, 3 different numbers of ports, and 2 different speeds and no need to upgrade to a new chip or new drivers.
- Customer-inspired design

Benefits

- Ready for the future and data growth scenarios with the performance of two processors – marking the standard of tomorrow with an increase in computing power of up to 17% compared to the previous generation (measured under SPEC Throughput)
- DDR4 memory enables for higher bandwidth and lower consumption, optimized for data center tasks, enterprise applications but also collaboration & messaging solutions
- Flexible expandability and diverse options for storage devices permits for the integration of existing and new SSD and HDD as needed. Less today, more in future – or vice versa
- Not only "greener", also less expensive over time: Cost reduction due to lower energy consumption - both, air conditioning and the power supply itself
- Two hot-plug PSUs make it easy to maintain the running system and ensure a 99,997% uptime
- The comprehensive tools of the Fujitsu ServerView Suite eases the administrators life
- Lifecycle investment protection: Updates are very important in a fast-paced world, especially considering cyber crime
- DynamicLoM guarantees you the highest flexibility to integrate the server into your infrastructure – now and in future without overhauling the existing infrastructure
- Optimized for data centers and SMEs
