- Memory/ pause helps store preferred settings, take a break
- Natural latch on and easy to combine with breastfeeding
- Hygienic, safe materials and BPA free.

PHILIPS
AVENT

Highlights

Rhythmic wave technology

Our rhythmic wave technology creates an expression cycle just like the way a baby naturally draws and swallows milk at the breast for fast and effectively generating milk flow. Fast and shallow stimulating movements are followed by slow and deep ones with an even natural suckling pace to gently but effectively express more milk. Pumping time is reduced and the expressing experience feels more natural and comfortable.

From single to manual usage

Your breast pump should be able to adapt to your needs. This is why our new single electric breast pump is designed to easily switch from single to manual usage with free handle including. This way you can always express in the way that you want to.

Soft massage cushion

The pump's unique massage cushion has a soft velvety texture that gives a warm feel to the skin to comfortably and gently stimulate milk flow. During pumping, it carefully mimics your baby's suckling for stimulating fast milk let-down. The soft massage cushion is designed to be comfortable and caring for attachment to breasts.

Optimised suction level

Our new twin electric breast pump is designed to offer just the right suction level. Choose from four stimulation modes to stimulate faster let-know while the four expression modes make it easy and comfortable to quickly express milk

Memory, time and pause/play

Our new twin electric breast pump is designed to be completely intuitive to use. If you need to take a break during expressing, simply press

the pause button and the play button to resume. The automatic memory function also makes it simple to store preferred settings so you can always express in the way that works best for you. The memory function will always show the last intensity level that was used. You can also manually select if you prefer.

Safe and hygienic expression

All products that come in contact with breastmilk are made using BPA-free safe materials, completely free from any potentially harmful chemicals. The pump is also specially designed so that there is no contact between the milk and the tube.

Philips Green Logo

Philips Green Products can reduce costs, energy consumption and CO2 emissions. How? They offer a significant environmental improvement in one or more of the Philips Green Focal Areas – Energy efficiency, Packaging, Hazardous substances, Weight, Recycling and disposal and Lifetime reliability.
