Weight and dimensions

- Dimensions of packaging (WxDxH): 135 x 75 x 400 mm
- Dimensions of product (WxDxH): 135 x 75 x 400 mm
- Weight incl. packaging: 1100 kg
- Weight of product: 1000 kg

Highlights

Selected high altitude beans

Altitude plays an important role in the coffee bean development. Conditions met at high altitude - temperature, rainfall - ensure a slower growth cycle for coffee trees, thus giving time for the rich flavors to concentrate in the beans

Special sensorial attributes

We carefully combine beans from prime coffee growing regions to give an optimum balance of aroma, body, aftertaste, acidity and visual impact.

Consistent quality

We only partner with coffee growers whose beans maintain their distinctive characteristics throughout the year, so you can enjoy the same in-cup quality at all times.

Thorough quality screening

Screening is carried out immediately after picking to remove unripe, damaged, discoloured or other sub-standard beans. Several additional checks happen throughout the full process to ensure only the right coffee beans end in your machine.

Individual roasting

Individual roasting allows each blend to preserve its intricate wealth of flavours. Each blend is roasted individually and only then mixed in the right proportions to preserve the wealth of flavours

Unique settings for each blend

Super-Automatic Espresso machines allow you to customize your coffee with endless possibilities. At Saeco we have tried all of them, and selected the ones that extract the best from Caffè Selezione Nobile, so that you can enjoy the most indulgent coffee experience from the first cup.

Ideal for Café Crema

The blend unfolds its unique characteristics in a smooth, delicate café crema. Its personality is also best expressed in speciality coffees such as cappuccino and latte macchiato
