# Huawei

AP6050DN&AP6150DN

Access Point

Datasheet

Product Overview //

Huawei AP6050DN&AP6150DN is the latest-generation technology-leading wireless access point (AP). In compliance with the latest 802.11ac Wave 2 standards, it provides secure gigabit wireless access and supports concurrent data processing for more users. The AP supports 4 x 4 MIMO and four spatial streams and provides a rate of up to 2.53 Gbit/s. The AP supports smooth evolution from 802.11n standards to 802.11ac standards, and meets the bandwidth requirements of large-bandwidth services such as High Definition (HD) video streams, multimedia, and desktop cloud services, delivering smooth and high-quality wireless services to enterprise users. With industry-leading capabilities in terms of signal coverage, access density, and operation stability, the AP provides high-quality mobile cloud access services to help customers build the optimal wireless network. The AP6050DN&AP6150DN delivers industry-leading performance in a rugged, attractive enclosure and is ideal for medium and large high-density scenarios, such as mobile office, elementary education, and higher education.

AP6050DN   AP6150DN
- 802.11ac Wave 2 standards compliance, MU-MIMO (4SU-3MU), delivering services simultaneously on 2.4G and 5G radios; 800 Mbit/s at 2.4 GHz; 1.73 Gbit/s at 5 GHz; and 2.53 Gbit/s for the device.
- Dual Ethernet interfaces support link aggregation and traffic load balancing to ensure link reliability.
- USB interface used for external power supply and storage.
- Supports cloud-based management and enables Huawei Agile Controller-Cloud Manager to manage and operate APs and services on the APs, reducing network O&M costs.

Feature Description //

MU-MIMO

- The AP supports MU-MIMO. The MU-MIMO technology allows an AP to send data to multiple STAs at the same time (currently, most 802.11n/11ac Wave 1 APs can only send data to one STA simultaneously). The technology marks the start of the 802.11ac Wave 2 era.

Cloud-based management

- Huawei Cloud Managed Network (CMN) Solution consists of the cloud management platform and a full range of cloud managed network devices. The cloud management platform provides various functions including management of APs, tenants, applications, and licenses, network planning and optimization, device monitoring, network service configuration, and value-added services.

GE access

- The AP supports the 80-MHz bandwidth mode. Frequency bandwidth increase brings extended channels and more sub-carriers for data transmission, and a 2.16 times higher rate. Support for High Quadrature Amplitude Modulation (HQAM) at 256-QAM and 4 x 4 MIMO increases the 5 GHz radio rate to 1.73 Gbit/s. The throughput of the AP is four times that of traditional 802.11n APs under the similar conditions.

High Density Boost technology

- Huawei uses the following technologies to address challenges in high-density scenarios, including access problems, data congestion, and poor roaming experience:

- Interference suppression

  - Huawei's Clear Channel Assessment (CCA) optimization technology reduces the possibility of air port resources shared by multiple devices, allows higher user access, and improves the throughput.

- Air port performance optimization

  - In high-density scenarios where many users access the network, the increased number of low-rate STAs consumes more resources on the air port, reduces the AP capacity, and lowers user experience. Therefore, Huawei APs will check the signal strength of STAs during access and reject access from weak-signal STAs. At the same time, the APs monitor the rate of online STAs in real time and forcibly disconnect low-rate STAs so that the STAs can reassociate with APs that have stronger signals. Terminal access control technology can increase air port use efficiency and allow access from more users.

- 5G-prior access

  - The APs support both 2.4G and 5G frequency bands. The 5G-prior access function enables an AP to steer STAs to the 5 GHz frequency band first, which reduces load and interference on the 2.4 GHz frequency band, improving user experience.

- Load balancing between APs

  - After the load balancing function is enabled, the AC distributes users evenly to APs based on user quantity and traffic volume. Traffic load is therefore balanced among APs to ensure stable AP performance.

- Smart roaming

  - Smart roaming technology is based on the 802.11k and 802.11v technologies and allows STAs to connect to APs with stronger signals, improving user experience and the overall performance of the wireless network.

Wired and wireless dual security guarantee

- To ensure data security, Huawei APs integrate wired and wireless security measures and provide comprehensive security protection.

- Authentication and encryption for wireless access

  - The APs support WEP, WPA/WPA2–PSK, WPA/WPA2–802.1x, and WAPI authentication/encryption modes to ensure security of the wireless network. The authentication mechanism is used to authenticate user identities so that only authorized users can access network resources. The encryption mechanism is used to encrypt data transmitted over wireless links to ensure that the data can only be received and parsed by expected users.

- Analysis on non-Wi-Fi interference sources

  - Huawei APs can analyze the spectrum of non-Wi-Fi interference sources and identify them, including baby monitors, Bluetooth devices, digital cordless phones (at 2.4 GHz frequency band only), wireless audio transmitters (at both the 2.4 GHz and 5 GHz frequency bands), wireless game controllers, and microwave ovens. Coupled with Huawei eSight, the precise locations of the interference sources can be detected, and the spectrum of them displayed, enabling the administrator to remove the interference in a timely manner.

- Rogue device monitoring

  - Huawei APs support WIDS/WIPS, and can monitor, identify, defend, counter, and perform refined management on the rogue devices, to provide security guarantees for air interface environment and wireless data transmission.

- AP access authentication and encryption

  - The AP access control ensures validity of APs. The CAPWAP link protection and DTLS encryption provide security assurance, improving data transmission security between the AP and the AC.

Automatic radio calibration

  - Automatic radio calibration allows an AP to collect signal strength and channel parameters of surrounding APs and generate AP topology according to the collected data. Based on interference from authorized APs, rogue APs, and non-Wi-Fi interference sources, each AP automatically adjusts its transmit power and working channel to make the network operate at the optimal performance. In this way, network reliability and user experience are improved.

Automatic application identification

  - Huawei APs support smart application control technology and can implement visualized control on Layer 4 to Layer 7 applications.

- Traffic identification

  - Coupled with Huawei ACs, the APs can identify over 1600 common applications in various office scenarios. Based on the identification results, policy control can be implemented on user services, including priority adjustment, scheduling, blocking, and rate limiting to ensure efficient bandwidth resource use and improve quality of key services.

- Traffic statistics collection

  - Traffic statistics of each application can be collected globally, by SSID, or by user, enabling the network administrator to know application use status on the network. The network administrator or operator can implement visualized control on service applications on smart terminals to enhance security and ensure effective bandwidth control.

Basic Specifications //

Hardware specifications

Item		Description
Technical specifications	Dimensions (H x W x D)	53 mm x 220 mm x 220 mm
	Weight	AP6050DN：1.25 kg AP6150DN：1.29kg
	Interface type	2 x 10/100/1000M self-adaptive Ethernet interface (RJ45) 1 x Management console port (RJ45) 1 x USB interface
	LED indicator	Indicates the power-on, startup, running, alarm, and fault status of the system.
Power specifications	Power input	12 V DC ± 10% PoE power supply: in compliance with IEEE 802.3at
	Maximum power consumption	22.9W (excluding the output power of the USB port) NOTE: The actual maximum power consumption depends on local laws and regulations.
Environmental specifications	Operating temperature	−10°C to +50°C
	Storage temperature	−40°C to +70°C
	Operating humidity	5% to 95% (non-condensing)
	Dustproof and waterproof grade	IP41
	Altitude	−60 m to +5000 m
	Atmospheric pressure	53 kPa to 106 kPa
Radio specifications	Antenna type	AP6050DN: built-in dual-band antennas AP6150DN: external dual-band antennas
	Antenna gain	AP6050DN: 2.4 GHz:6dBi 5 GHz: 6dBi	AP6150DN: 2.4GHz: 3.5dBi 5GHz: 4dBi

Item	Description
Radio specifications	
Maximum number of VAPs for each radio	16
Maximum number of users	≤ 512
Maximum transmit power	2.4 GHz: 26dBm (combined power) 5 GHz: 25dBm (combined power) NOTE: The actual transmit power depends on local laws and regulations.
Power increment	1 dBm
Receiver sensitivity	2.4 GHz 802.11b：−102 dBm @ 1 Mbit/s；−95dBm@ 11 Mbit/s
	2.4 GHz 802.11g：-96dBm @ 6 Mbit/s； -76dBm @ 54 Mbit/s
	2.4 GHz 802.11n (HT20)：-96 dBm @ MCS0；-71dBm @ MCS31
	2.4 GHz 802.11n(HT40)：-93 dBm @ MCS0； -69 dBm @ MCS31
	5 GHz 802.11a：-94 dBm @ 6 Mbit/s； -74dBm @ 54 Mbit/s
	5 GHz 802.11n (HT20)：-94 dBm @ MCS0； -69 dBm @ MCS31
	5 GHz 802.11n (HT40)：-91 dBm @ MCS0； -68dBm @ MCS31
	5 GHz 802.11ac (VHT20)：-94 dBm @ MCS0NSS1； -66 dBm @ MCS8NSS4
	5 GHz 802.11ac (VHT40)：-91 dBm @ MCS0NSS1； -62 dBm @ MCS9NSS4
	5 GHz 802.11ac (VHT80)：-87 dBm @ MCS0NSS1； -58 dBm @ MCS9NSS4
	5 GHz 802.11ac (VHT160)：-85 dBm @ MCS0NSS1； -58 dBm @ MCS9NSS2

Software specifications

Item	Description
WLAN features	• Compliance with IEEE 802.11a/b/g/n/ac/ac wave2 • Maximum rate: 2.53 Gbit/s • 4x4 MIMO with four spatial streams, single-user MIMO • 4x4 MIMO with three spatial streams, multiuser MIMO • Maximum Ratio Combining (MRC) • Cyclic Delay Diversity (CDD)/Cyclic Shift Diversity (CSD) • Maximum Likelihood Detection (MLD) • Data unit aggregation, including A-MPDU (Tx/Rx) and A-MSDU (Rx only) • 802.11 Dynamic Frequency Selection (DFS) • Short Guard Interval (GI) in 20 MHz, 40 MHz, 80 MHz,and 160 MHz modes • Priority mapping and packet scheduling based on a Wi-Fi Multimedia (WMM) profile to implement priority-based data processing and forwarding • Automatic and manual rate adjustment (the rate is adjusted automatically by default) • WLAN channel management and channel rate adjustment • Automatic channel scanning and interference avoidance • Service Set Identifier (SSID) hiding, support for SSIDs in Chinese • Signal Sustain Technology (SST) • Unscheduled Automatic Power Save Delivery (U-APSD) • Control and Provisioning of Wireless Access Points (CAPWAP) • Automatic access • Hotspot2.0 • 802.11k and 802.11v smart roaming • Fast roaming (≤ 50 ms) • Cloud-based management

| Item	Description
Network features	• Compliance with IEEE 802.3u • Auto-negotiation of the rate and duplex mode; automatic switchover between the Media Dependent Interface (MDI) and Media Dependent Interface Crossover (MDI-X) • SSID-based VLAN assignment • VLAN trunk on uplink Ethernet ports • 4,094 VLAN IDs (1 to 4,094) and a maximum of 16 virtual APs (VAPs) for each radio • AP control channel in tagged and untagged mixed mode • DHCP client, obtaining IP addresses through DHCP • Tunnel forwarding and direct forwarding • STA isolation in the same VLAN • Multicast Domain Name Service (mDNS) gateway protocol: supports AirPlay and AirPrint service sharing between users of different VLANs • Access control lists (ACLs) • Link Layer Discovery Protocol (LLDP) • Service holding upon CAPWAP link disconnection • Unified authentication on the AC • AC dual-link backup • Soft Generic Routing Encapsulation (GRE) • IPv6 Source Address Validation Improvements (SAVI) • IPv4/IPv6 ACL • Network Address Translation (NAT)
QoS features	• Priority mapping and packet scheduling based on a WMM profile to implement priority-based data processing and forwarding • WMM parameter management for each radio • WMM power saving • Priority mapping for upstream packets and flow-based mapping for downstream packets • Queue mapping and scheduling • User-based bandwidth limiting • Adaptive bandwidth management (the system dynamically adjusts bandwidth based on the number of users and radio environment to improve user experience) • Airtime scheduling • Support for Microsoft Lync APIs and high voice call quality through Lync API identification and scheduling

| Item	Description
Security features	• Open system authentication • WEP authentication/encryption • WPA/WPA2-PSK authentication and encryption • WPA/WPA2-802.1x authentication and encryption • WPA-WPA2 authentication • WAPI authentication and encryption • WIDS including rogue AP and STA detection, attack detection, STA/AP blacklist and whitelist • 802.1x authentication, MAC address authentication, and Portal authentication • 802.11w Protected Management Frames (PMFs) • Application identification in Fat AP and cloud-based management working modes • URL filtering in Fat AP and cloud-based management working modes
Maintenance features	• Unified management and maintenance on the AC • Plug-and-Play (PnP): automatic ally going online and loading configurations • Batch upgrade • Local AP management through the serial port or using Telnet • Real-time configuration monitoring and fast fault location using the NMS • System status alarm • STelnet using Secure Shell (SSH) v2 • Secure File Transfer Protocol (SFTP) using SSH v2 • Web local AP management through HTTP or HTTPS in Fat AP mode • Real-time configuration monitoring and fast fault location using the NMS • Simple Network Management Protocol (SNMP) v1/v2/v3 in Fat AP mode • Network Time Protocol (NTP) in Fat AP mode
BYOD	• Identifies the device type according to the Organizationally Unique Identifier (OUI) in the MAC address. • Identifies the device type according to the User Agent (UA) information in an HTTP packet • Identifies the device type according to DHCP options. • The RADIUS server delivers packet forwarding, security, and QoS policies according to the device type carried in the RADIUS authentication and accounting packets.
Location service	• Locates tags manufactured by AeroScout or Ekahau. • Locates Wi-Fi terminals.
Spectrum analysis	• Identifies interference sources such as baby monitors, Bluetooth devices, digital cordless phones (at 2.4 GHz frequency band only), wireless audio transmitters (at both the 2.4 GHz and 5 GHz frequency bands), wireless game controllers, and microwave ovens. • Works with Huawei eSight to locate and perform spectrum analysis on interference sources.

Professional Service and Support

Huawei WLAN planning tools deliver expert network design and optimization services using the most professional simulation platform in the industry. Backed by fifteen years of continuous investment in wireless technologies, extensive network planning and optimization experience, and rich expert resources, Huawei helps customers:

- Design, deploy, and operate a high-performance network that is reliable and secure.
- Maximize return on investment and reduce operating expenses.
