RoboSHOT HDBT Version 1.0.0/1.0.1

Release Notes – January 27, 2017

Affected firmware

Component	Version
System	1.0.1

Additions and Enhancements

Version 1.0.1 is an internal update to the initial release of the RoboSHOT HDBT cameras.

Known Issues

- When storing a custom home position, you must check "Store with current color settings", otherwise the preset is not saved.
- The camera will always go to the default home position on power-up, even when a custom preset is stored. After the camera initializes, it will go to the custom home preset in response to the home button on the IR remote or in the web interface.
- When the camera is used with a PCC Premier precision camera controller, camera presets may persist on the controller after they are deleted from the camera.

Browser Support

We have tested this product with these web browsers:

- Chrome®
- Microsoft® Internet Explorer®
- Safari®
- Firefox®

We test using the browser version available from the vendor at that time. Older versions of these browsers are likely to work, and other browsers may also work.
