7. Parking monitoring button (11)
   Before turning off the camera, press this button to enter into Parking Monitoring mode. The "P" icon will appear in the middle of the screen. When the camera is turned off and this function is activated, as soon as something hits the car, the camera will automatically turn on and make a recording of about one minute. The recording will be automatically saved.
   If you would like to deactivate the function, press the "P" button again, the icon will disappear.
8. Charging the battery
   - Connect the DVR to the computer with a USB cable.
   - Connect the DVR to the car.
   When the battery is being charged the battery icon will flash on the screen and the indicator light will turn red. When fully charged, the icon will stop flashing and the indicator will go out.
9. Install the memory (TF) card
   Note: For this device you will need a memory card Class 7 or higher. To install the card:
   - Slide the card into the card slot (5) until it clicks, make sure that the card is inserted with the right way up.
   - To take out the card, press gently onto the card, it will be ejected automatically.
   - Make sure that the card is inserted in the right way, otherwise you could damage the card.
   - If the TF card is not compatible you could try again or try another card.
   - Maximum support is 32GB
10. Setting Date and Time
    You can set the date and time in the Setup menu. By using the Up and Down buttons you can select the date you wish to set. When you have reached the right digit, press OK to confirm and the cursor will switch automatically to the next field. You can set the time in the same way.

Note: When the camera indicates that there is low power, it will automatically save the last recording and turn off.
