TRIPP-LITE

Wireless HDMI Extender Kit, Transmitter/Receiver, IR Control, Dual Antennas, 2nd Receiver Option, Up to 165 ft. (50 m)

MODEL NUMBER: B126-1A1-WHD1

Extends a wireless HDMI 1080p (@ 60 Hz) audio/video signal to an HDMI display located up to 165 ft. (50 m) from the HDMI source device.

Features

All-in-One HDMI Wireless Extender for Displaying Video in Boardrooms and Conference RoomsThis complete wireless HDMI transmitter and receiver system is recommended for video presentations in conference rooms, trade shows, home theaters, bars, restaurants, schools, digital signage and other applications in which connecting long video cables could be a burden. The B126-1A1-WHD1 extends 1080p video and stereo audio signals from an HDMI source device to an HDMI display up to 165-ft. (50.29 m) away. No bulky or costly cabling infrastructure is needed.

Plug-and-Play Operation for Quick Setup and Immediate UseThe wireless HDMI audio/video transmitter and receiver set works right out of the box with no software or drivers required. Mounting hardware is included for installing the units on walls or other flat surfaces. Connect the receiver to the display and the transmitter to the source with user-supplied HDMI cables (such as P568-Series). Then, connect the included IR cables for remote control, and plug the dual power supplies into an AC outlet.

Wireless Transmission Saves You Money on Cable and Installation CostsThe B126-1A1-WHD1 eliminates more than just hassles. You'll save on the costs of cabling infrastructure and the labor to install it. Cable clutter is reduced, and you will enjoy more flexibility in placement of the source and display with no cables to relocate when you want to reconfigure the room. The transmitter and receiver units communicate over a 5 GHz wireless frequency that allows fast data transmission and reduced interference from other wireless sources. Be sure the transmitter and receiver share a direct line of sight for best results.

IR Pass-Through Technology Lets You Control the Video from an Extended DistanceThe IR cables let you control your source device with its remote (play, pause, fast forward, etc.), while you're standing near the receiver located up to 165-ft. (50.29 m) away. Make sure the transmitter's IR bulb is within sight of the source and the receiver's IR bulb is in range of the source's remote.

Transmits Crystal-Clear 1080p Video for High-Definition PresentationsThe B126-1A1-WHD1 ensures high-definition performance in a one-to-one application, where there is less obstruction to occur. It supports video resolutions up to 1920 x 1080 (1080p) at 60 Hz with 24-bit Deep Color (8 bits per channel) and stereo audio. AES 128 encryption protects your wireless transmissions. LEDs indicate when the transmitter and receiver units are receiving power, transmitting data and connected to a wireless signal.

Highlights

- Display HDMI audio/video up to 165-ft. (50.29 m) away with no costly cable installation
- Supports connection of a 2nd receiver up to 85-ft. (25.91 m) away from the source
- Transmits HD picture quality at resolutions up to 1920 x 1080 (1080p) @ 60 Hz
- IR pass through allows you to use your source's remote while near the display
- Easy plug-and-play operation—just connect the transmitter and receiver and play video

Applications

- Connect a laptop for a video or PowerPoint presentation in a conference room or meeting room, where the source device changes frequently
- Extend HDMI signals in an indoor environment where drilling through walls for cabling is impossible or not practical
- Gain flexibility in where the source and display are placed, with the freedom to move and relocate them
- Create a cleaner, streamlined installation for a trade show booth
- Improve the line of sight for digital signage in a restaurant, store, school, airport or entertainment venue
