1 GB is 1 billion bytes. 1 TB is 1000 GB. Actual formatted capacity is less and may vary depending on preloaded materials and operating environment. Recovery Management uses a portion of the stated hard disk capacity as dedicated backup space.

The listed battery life is obtained by simulating watching video clips stored on the mobile device. The test clip loops and continues to run, without interruption or any other inputs, until the battery is drained. Stated battery life is for comparison purposes only. Actual battery life varies by model, configuration applications, power management settings, operating conditions, video clip format, and features used. A battery's maximum capacity decreases with time and use.

 Weight may vary depending on product configuration, vendor components, manufacturing variability, and selected options.
 Shared system memory may be allocated to support graphics, depending on system memory size and other factors. Actual system memory variable to the operating system will be reduced by any memory used by the graphics solution and resources required by the operating environment.
 Memory speed may vary, depending on the CPU, chipset or memory fixed.
 A 64-bit operating system is required to enjoy the ultimate performance of 4 GB or higher memory.

 In a continuing effort to improve the quality of our product, information in this document is subject to change without notice. Images shown are only representations of some of the configurations available for this model. Availability may vary depending on region. As a phenomenon known to thin-film transistors (TFTs), liquid crystal displays (LCDs) commonly exhibit a small number of discoloration dots, as so-called "non-conforming pixels." This phenomenon is a limitation of TFT LCD technology, not a product defect, and as such is not covered by Acer's warranty. © 2017. All rights reserved.
