AVENT

Highlights

Relaxing position

The breast pump has a unique design, so your milk flows directly from your breast into the bottle or container, even when you are sitting up straight. This means you can sit more comfortably when pumping: no need for you to lean forward to make sure all your milk ends up in the bottle. Sitting comfortably and being relaxed when pumping, helps your milk to flow more easily.

Soft massage cushion

Our massage cushion has a soft velvety texture that gives a warm feel to the skin for comfortable, gentle stimulation of your milk flow. The iconic petal cushion is designed to mimic baby suckling, intended to gently help stimulate let down.

Simple settings to choose from

When switched on, the pump automatically starts in gentle stimulation mode to get your milk flowing. Then choose from 3 pumping settings to make milk flow most comfortable for you.

Easy set up, express and clean

Few separate parts and intuitive design. Easily express milk for your baby, anytime.

Includes our Natural bottle

The wide breast shaped nipple promotes natural latch on similar to the breast, making it easy for your baby to combine breast and bottle feeding.

Unique comfort petals

Petals inside the nipple increase softness and flexibility without nipple collapse. Your baby will enjoy a more comfortable and contented feed.

Pump in storage containers

With the milk storage cup adapter, you can easily pump in the milk storage container. No leakage, no spillage of your precious breast milk.

Leak proof lid

Philips Avent storage cups have a lid that creates a secure seal for safe storage and transport.
