Data loss prevention

Secure, long-term and central storage of all emails with the Unified Mail Archive. The UMA archives all emails for any length of time in accordance with legal requirements.

Legal requirements

Legal email archiving according to the highest standards (GoBD and BSI TR 03125). Emails and documents are signed by qualified time stamps.

Outlook plugin and import tool

Work efficiently and import email datasets smoothly thanks to our complete outlook integration via plugin.

Document management

The intelligent DMS system ensures that the data is processed automatically and made available to the users.

Securepoint email archiving

Store email data reliably

Nowadays mail servers have become organisation and archiving systems for us. Constant email usage results in Information chaos, even if storage is structured. Mail servers are stretched to their limits and their performance suffers as a result. License and storage costs also rise. In addition, legislators specify that emails must be archived in a legally-compliant manner.

For these reasons, we have developed the Unified Mail Archive (UMA) which covers all requirements.

Archiving any mail server

Compatible with standard mail servers such as Microsoft Exchange®, Hosted Exchange mailboxes, Tobit®, etc. and also all IMAP, SMTP and POP3-compatible mail servers.

Reduce load on mail server/simplify data backup

Increases performance of existing mail server and frees up storage capacities by removing historic emails. Reduces email storage costs permanently through rules-based deletion of unnecessary emails. The UMA drastically simplifies data backups.

Features overview:

- Reduces load on mail servers and simplifies data storage
- Meets the compliance requirements according to GoBD (replaces GDPdU and GoBS), HGB, AO, Basel II and BSI TR 03125
- High-performance search engine for emails and documents
- Sorts, categorises and indexes emails and documents
- Automatically creates email archiving mailboxes during live operation
- Microsoft Outlook integration via plugin
- Access from every email client via IMAP
- Simple email recovery by user

Press review

„If companies are looking for an archivingsolution that is totally reliable and audit-proof, then they should look no further than Securepoint Unified Mail Archive (UMA). It is one of the best solutions on the market because it complies with the strictest requirements."

- TecChannel *Thomas Joos*

Automatic storage in accordance with archiving periods

Rules-based storage of important email correspondence and attached documents such as offers, invoices, medical records etc.

Automatic storage in accordance with legal archiving periods for public authorities, companies, clinics, law offices and all other forms of organisation. Manipulation-free and legally-sound archiving is ensured by the additional application of daily current and qualified time stamps.

Microsoft Outlook plugin and PST import tool

The UMA Outlook plugin allows comfortable integration of UMA-DMS into the well known Outlook user interface. With the help of an easily reachable search function, you may quickly find emails, documents and pictures. Archived emails will be restored in any file folder, simply by just a single mouse click.

Simple import of emails: with the UMA PST import tool, there is a simple solution for importing emails directly from an MS Outlook PST file or an MS Outlook account into the UMA archive.

Secure archiving.

- Adjustable two-man rule, taking into account the applicable data protection regulations
- Automatic archiving of complete email data streams
- Automatic rules-based storage of emails in accordance with legal archiving periods
- Extensive indexing of all elements (incl. OCR)
- Import/mass import directly from mail server
- Microsoft Outlook import (PST files and Outlook accounts)
- User administration via active directory, LDAP or using local database
- Integrated monitoring and reporting
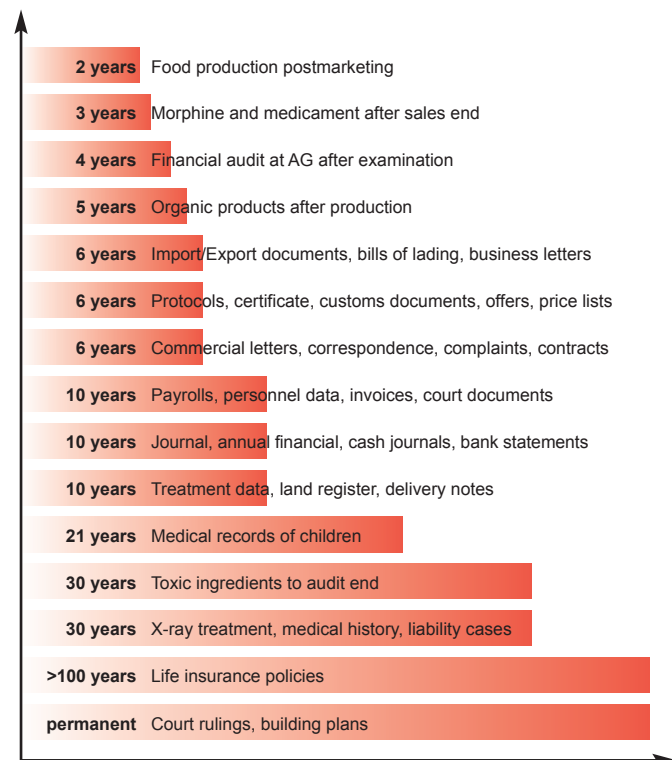

EU DS-GVO ready

Time stamp

Securepoint UMA uses qualified time stamps for long-term archiving that are automatically made available to each UMA on a daily basis from a German accredited trust centre. This is particularly significant because many other archiving solutions do not use them. If signed and unsigned emails and documents reach the UMA archive, using qualified time stamps in accordance with legal requirements ensures that the data that was available at a specific point in time has not been tampered with. These time stamps thus ensure that all emails and documents can be provided and archived automatically and with audit compliance.

The probative value retention of the documents and emails is thus saved on a continuous basis using a cryptographic signature. The implementation of the long-term archive follows the requirements of technical guideline 03125 of the Federal Office for Information Security - BSI.

Legal info on email archive

Email archiving requires legally unchanged and unchangeable storage over very long periods - six, ten, 30 years or even forever. The importance of email archiving thus stretches far beyond simply reducing the load on your mail server. The Securepoint Unified Mail Archive (UMA) offers an extremely affordable and efficient option for the permanent archiving of emails that your mail server receives and sends.

Legally-compliant, audit-proof and automatic archiving takes place in accordance with GoBD (replaces GDPdU and GoBS), HGB, AO, Basel II and BSI TR 03125, the highest German standard.

2 years	Food production postmarketing
3 years	Morphine and medicament after sales end
4 years	Financial audit at AG after examination
5 years	Organic products after production
6 years	Import/Export documents, bills of lading, business letters
6 years	Protocols, certificate, customs documents, offers, price lists
6 years	Commercial letters, correspondence, complaints, contracts
10 years	Payrolls, personnel data, invoices, court documents
10 years	Journal, annual financial, cash journals, bank statements
10 years	Treatment data, land register, delivery notes
21 years	Medical records of children
30 years	Toxic ingredients to audit end
30 years	X-ray treatment, medical history, liability cases
>100 years	Life insurance policies
