

UBT 12/17

Rechargeable AGM battery 17 Ah / 12 V

UBT 12/17: Original batteries for optimum performance

Salicru's **UBT** series batteries are rechargeable lead-lead dioxide systems. The sulphuric acid electrolyte is absorbed by the separators and plates. And these in turn immobilised. The battery is completely sealed and watertight and therefore maintenance free, enabling it to be used in any position. If the battery is accidentally overcharged, resulting in the production of hydrogen and oxygen, a number of special one-way valves allow the gases to escape to avoid interior overpressure.

Battery construction:

Component	Positive plate	Negative plate	Container	Lid
Raw material	Lead dioxide	Lead	ABS	ABS
Safety valve	Terminal	Separator	Electrolyte	
Rubber	Copper	Fibreglass	Sulphuric acid
