Speak. Copy. Scan.

hp

Command HP printers with the sound of your voice

In today's smart homes and offices, you can use your voice to control digital devices. And now, that includes HP printers. The HP Printing Voice Assistant is reinventing voice command technology for touchless copying and scanning. Simply use one or more of 170 natural language voice commands to complete workflows faster and more efficiently.

Key Features

One touch. Then talk.

Now you can copy and scan more productively. Activate a session-based voice command with a single touch or stylus tap of the HP Printing Voice Assistant. Then simply speak, to effortlessly communicate with a range of HP single and multifunction printers and scanners. Boost productivity with 10 "Quickset" voice commands for more complex workflows.

Just speak naturally

No need to memorize exact commands. HP Printing Voice Assistant understands what you're saying – in five languages. It supports 170 natural language voice commands for devices configured in English, French, Italian, German, and Spanish. See the User Guide for the full list of commands.[1]

Security and privacy

HP Printing Voice Assistant features built-in security and is neither cloud-connected nor Bluetooth®-dependent, so your device isn't always listening. Time-based voice sessions are active only when the "Voice command" button is pressed, an audio cue sounds, and the LED light is illuminated. Sessions are not recorded.

Install it. Use it. In just minutes

Installation is quick and easy using an integrated hardware pocket or via USB cable. The HP Printing Voice Assistant is compatible with select HP LaserJet Enterprise and Managed devices that have 2.7", 4.3", 8", or 10.1" control panels. This feature requires FutureSmart 4 or higher firmware.

Universal design and accessibility

Intuitive and easy-access features make HP Printing Voice Assistant user-friendly for everyone. It is compliant with worldwide accessibility standards, including the U.S. Revised 508 and Europe's EN 301 549.
