

MindPod

The mobile concentration workplace

The Mindpod is a quiet workplace that suits every organization. Its smart and modern design matches any dynamic office environment.

Use of a lot of glass, acoustic panels, and no doors creates a quiet, yet open space.

With respect to the office space, it is advised to apply a minimal ventilation of 31 m³/hour per person doing light physical work. In our MindPod, we reach a ventilation that is double this advised amount (60 m³/hour per person).

We can experience noise pollution in different ways. A noise volume that is just (too) loud can already be a considerable nuisance. Especially when the noise is persistent for a long time. Your capacity to concentrate can also get disturbed when you can follow the conversations around you. Our MindPod contains acoustic panels. These sound absorbing panels can minimise the effects of resonance (reverberation of the sound) and, therefore, limit the noise nuisance.

Concentration workplace: mobile & modular

At times, every knowledge worker needs a quiet and calm environment to be able to focus. Not all offices and workplace concepts are suitable for this. Distractions and noise are lurking. With MindPod, BakkerElkhuizen has created a mobile solution that provides peace and quiet in the workplace. The MindPod is the unique solution for easily setting up a mobile concentration workplace.
