# iDRAC9 with Lifecycle Controller Version 3.21.21.21

Redfish API Guide

**DELL**EMC

## Notes, cautions, and warnings

ⓘ | **NOTE: A NOTE indicates important information that helps you make better use of your product.**

△ | **CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.**

⚠ | **WARNING: A WARNING indicates a potential for property damage, personal injury, or death.**

# Contents

# Overview

The Redfish Scalable Platforms Management API is a standard defined by the Distributed Management Task Force (DMTF). Redfish is a next-generation systems management interface standard, which enables scalable, secure, and open server management. It is a new interface that uses RESTful interface semantics to access data that is defined in model format to perform out-of-band systems management. It is suitable for a wide range of servers ranging from stand-alone servers to rack mount and bladed environments and for large scale cloud environments.

Dell PowerEdge servers offer a comprehensive range of embedded systems management functions enabled by the Integrated Dell Remote Access Controler (iDRAC) with Lifecycle Controller. These functions are designed by adhering industry standard application programming interfaces (APIs) including Redfish.

iDRAC with Lifecycle Controller technology is part of a larger data center solution that helps keep business critical applications and workloads available always. The technology allows administrators to deploy, monitor, manage, configure, update, troubleshoot, and remediate Dell servers from any location, and without the use of agents. It accomplishes this regardless of an operating system or a Hypervisor presence or state.

This document provides a brief overview on Redfish and information on various aspects of Redfish protocol, supported schema, and Redfish Eventing implemented in iDRAC. It also provides guidelines for using the Dell Redfish APIs.

Topics:

- New in this release
- Benefits
- Key technologies
- Other documents you may need

## New in this release

- Support for Redfish specification v1.2.0.
- Added support for Network, Storage, and Memory schemas.

## Benefits

Redfish is a new global standard for open server management. It has the capabilities to support single servers, converged infrastructure, and hyper—scale architecture. It provides the following benefits over existing server management methods:

- Increased simplicity and usability
- High data security
- Programmable interface that can be easily scripted
- Widely-used standard

## Key technologies

Redfish uses web and cloud-based technologies that enable communications with servers using common programming and scripting languages such as Python, JAVA, and C. The key technologies are as follows:

- REpresentational State Transfer (REST) interface — REST is a web based API, which provides a way to interact with a system over a normal web connection. It supports both HTTPS and HTTP.
- Java Script Notation (JSON) — JSON represents data in such a way that it is much easier to read than XML. It also provides the formatting that is required for scripting languages to interface with the data.
- OData — It is important to standardize the data format when implementing a common interface across multiple vendors. OData provides the required framework to ensure that the data structure remains interchangeable between server vendors.

# Other documents you may need

For more information about Redfish, see the DMTF website http://www.dmtf.org/standards/redfish. This website provides access to schema files, white papers, technical notes, and so on.

To download or access a file, go to http://www.dmtf.org/standards/redfish, locate the desired section, and click the link to open or download the files.

You can download the OEM schemas from the Dell website at http://downloads.dell.com/redfish/bmc/schemas/.

# Redfish-based systems management

This section provides an overview of the Redfish service implemented in the iDRAC firmware. It includes information about the Redfish API, schema, configuration, authentication, authorization, and so on.

Topics:

- URL support
- Redfish configuration
- Redfish schema
- Redfish authentication and authorization
- Roles and privileges
- iDRAC licensing
- HTTP methods
- HTTP headers
- HTTP status codes and error messages
- SSL certificates of iDRAC
- Eventing

## URL support

Redfish is a web-based API which implies that resources are accessed using client supplied URLs. URLs are required to identify the Redfish resources. The Redfish API uses a simple URL hierarchy which follows a `/redfish/v1/` pattern for all resources. To access a Redfish resource, use the URL pattern `https://<iDRAC IP>/redfish/v1/<Resource Path>`. For more information on the supported resources, see Redfish resources. iDRAC supports the following URL patterns:

- `/redfish` — URL for the Redfish version object.
- `/redfish/v1` — Root URL for version 1 of the Redfish services.
- `/redfish/v1/odata` — Redfish services expose an OData service document at this URI. This service document provides a standard format for enumerating resources that are exposed by the service by enabling all generic hypermedia-driven OData clients to navigate to the resources of the service.
- `/redfish/v1/$metadata` — Redfish services expose a metadata document in XML format. This document describes the resources and collections that are available at the service root URI. It also provides references to other metadata documents, which describe the complete set of resource types that are exposed by the service.
- `/redfish/v1/$metadata#<Collection or a Singleton resource>` — Metadata URL specified as a part of @odata.context property for all resources. This URL returns data in XML format.
- `/redfish/v1/JsonSchemas` — This URL returns data in JSON format. The output is a collection of the JsonSchemaFile resource instances.
- `/redfish/v1/JsonSchemas/<resource URI>` — The JSON Schema File resource instance describes the location (URI) of a particular Redfish schema definition being implemented or referenced by a Redfish service. This URL returns data in JSON format.
- `/redfish/v1/<other resource specific URIs>` — All instrumentation resources follow this pattern.

ⓘ | **NOTE:** The Redfish standard implemented in iDRAC supports only HTTPS protocol.

(i) **NOTE:** In previous versions of Redfish implementation, # character was parsed as #. Because this character is treated as a break character by the code, any characters after # were ignored. Now, # character is automatically converted to %23. This conversion allows the consoles or REST clients to use the URL without any errors.

# Redfish configuration

You can configure the Redfish interface on iDRAC by enabling or disabling the iDRAC attribute. If this attribute is disabled, HTTPS requests to Redfish URIs fail with an HTTP status code of 404 and an error message indicating that this attribute is disabled.

(i) **NOTE: You do not need to restart the web server when enabling or disabling Redfish attribute.**

## Configuring Redfish service using iDRAC web interface

To enable or disable the Redfish service on iDRAC, perform the following tasks:

1    In the iDRAC web interface, navigate to the following screen:
   - 13th generation of PowerEdge servers: **Overview** > **iDRAC Settings** > **Network** > **Services**
   - 14th generation of PowerEdge servers: **iDRAC Settings** > **Services** > **Redfish**
2    Under **Redfish**, select **Enabled** and click **Apply** to enable the service.

## Configuring Redfish service by using iDRAC RACADM

You can enable or disable the Redfish service using the iDRAC attribute `iDRAC.Redfish.Enable (Read or Write)`.

## Configuring Redfish service by using WS-MAN

The Redfish attribute `iDRAC.Redfish.Enable` is modeled under the existing `DCIM_iDRACCardEnumeration` class. You can configure the Redfish service using existing methods such as SetAttribute, SetAttributes, and ApplyAttributes of `DCIM_iDRACCardService` class.

# Redfish schema

The Schemas for the Redfish resources are defined according to the OData Schema representation, which can be directly translated to a JSON Schema representation.

# Redfish authentication and authorization

For certain resources, the Redfish clients may require to authenticate access. Redfish relies on the managed system for the required credentials and supported forms of authentication. In iDRAC, authentication is based on local credentials and remote protocols such as Active Directory and LDAP.

(i) **NOTE: You must have the required iDRAC license to use Active Directory and LDAP.**

Authorization includes both user privilege and license authorization. Redfish support is included in all levels of iDRAC licensing. The following table details the authentication and authorization required for each Redfish action:

**Table 1. Redfish authentication and authorization**

| Redfish actions | Authentication required | Authorization required |
|---|---|---|
| Read operation on any instrumentation data | Yes | Yes |
| Modify instrumentation data | Yes | Yes |
| Invoke actions | Yes | Yes |
| View service root | No | No |
| View metadata document | No | No |
| View OData service document | No | No |
| View message registry | No | No |
| View Redfish version URI | No | No |
| View JSONSchemaFile resource URI | No | No |
| View JSON schemas URI | No | No |

The Redfish service provides access to Redfish URLs by using the following methods:

- **Basic authentication:** In this method, user name and password are provided for each Redfish API request.
- **Session-based authentication**: This method is used while issuing multiple Redfish operation requests.
  - Session login is initiated by accessing the Create session URI. The response for this request includes an X-Auth-Token header with a session token. Authentication for subsequent requests is made using the X-Auth-Token header.
  - Session logout is performed by issuing a DELETE of the Session resource provided by the Login operation including the X-Auth-Token header.

ⓘ **NOTE: The iDRAC firmware incorporates the concept of application sessions for various existing interfaces such as the web interface, WSMan, and RACADM. With the introduction of Redfish-specific sessions, Redfish inherits the characteristics of web server sessions and the property Session Timeout inherits the web server session timeout value.**

ⓘ **NOTE: To ensure a secure connection, Dell recommends using TLS 1.1 or later.**

# Roles and privileges

To allow different levels of access to Redfish services, you can create user accounts with specific roles. The following table lists the roles and the privileges assigned to them:

**Table 2. Roles and privileges**

| Role | Assigned privileges |
|---|---|
| Administrator | <ul><li>Login</li><li>ConfigureComponents</li><li>ConfigureManager</li><li>ConfigureSelf</li><li>ConfigureUsers</li></ul> |
| Operator | <ul><li>Login</li><li>ConfigureComponents</li><li>ConfigureSelf</li></ul> |

| Role | Assigned privileges |
|------|---------------------|
| ReadOnly | • Login |

# iDRAC licensing

Redfish support is included in all license types of iDRAC. However, some of the iDRAC features require specific licenses. If a required license is not present, certain Redfish APIs may not be accessible and return an HTTP 403 status code. 403 implies that there is no sufficient privileges. In other cases, some of the properties in certain resource may not be returned in a response. The service may also return errors when such properties are modified. For information of specific license requirements for the resources, see Redfish resources.

# HTTP methods

The REST API allows you to specify the type of request. It adheres to the Create, Retrieve, Update, and Delete (CRUD) standard format. The data is generated by accessing URIs that can be accessed by using the following HTTP methods:

- GET
- HEAD
- POST
- PUT
- PATCH
- DELETE

# GET

Use the GET method to retrieve a representation of a resource. The representation can either be a single resource or a collection. Depending on the media type, the service returns the resource representation by using one of the media types specified in the Accept header. If the Accept header is not present, the service returns the resource representations either as **application/json** or **application/xml**. The resources support the formats defined by the Redfish standard.

The HTTP GET method is used to retrieve a resource. The service ignores the content of the body on a GET. The GET operation is unchanged in the absence of external changes to the resource.

# HEAD

All URLs support the HEAD method. This method returns the response headers.

# POST

Use the POST method to invoke actions and create a resource. The POST request is submitted to the resource collection to which the new resource belongs. Submitting a POST request to a resource that represents a collection is equivalent to submitting the request to the Members property of that resource. Services that support adding members to a collection support both forms.

Services support the POST method for creating resources. If the resource does not support this method, status code 405 is returned. The body of the create request contains a representation of the object to be created. The service can ignore any service-controlled properties such as ID, forcing those properties for the service to be overridden. The service sets the Location header to the URI of the newly created resource.

# PUT

Use the PUT method to replace the property values of a resource. Properties omitted from the request body are reset to their default value. Services support the PUT method to replace a resource completely. If a service does not support this method, status code 405 is returned. Services may return a representation of the resource after any server-side transformations occur in the body of the response. The PUT operation must be unchanged in the absence of external changes to the resource. The exception is that the ETag values may change as a result of this operation.

# PATCH

Use the PATCH method to update pre-existing resources. Changes to the resource are sent in the request body. This method does not change the properties that are not specified in the request body. The response is either empty or a representation of the resource after the update is done, or a success code if the operation is successful. Depending on the policies, the implementation may reject the update operation on certain fields and not apply any of the requested updates.

ⓘ **NOTE: Starting from iDRAC version 3.15.15.15 release, you can use the PATCH method with up to 50 attributes at a time.**

# DELETE

Use the DELETE method to remove a resource. Services support the DELETE method for resources that can be deleted. If the resource cannot be deleted, status code 405 is returned. Services return a representation of the deleted resource in the response body.

# HTTP headers

The server response contains only basic information about related resources. Any metadata that is required to process a request or response is accessed by using HTTP headers. iDRAC supports the following request headers:

| Header | Description |
| --- | --- |
| If-Match | Supported only for AccountService and FirmwareInventory URIs. |
| If-None-Match | Supported only for AccountService, FirmwareInventory, and metadata URIs. |
| Content-Length | Returned on all responses except responses that have Transfer-Encoding: chunked. |
| Content-Type | <ul><li>Responses other than OData metadata—application/json;charset=utf-8</li><li>OData responses—application/xml;charset=utf-8</li></ul> |
| ETag | Supported on AccountService, FirmwareInventory, and metadata URIs. |
| Location | Service sets this header when resources are created or when HTTP requests are redirected to other resources. |
| Cache-Control | Returned on all responses. Metadata URIs support cached responses. Instrumentation resources cannot be cached. |
| X-Auth-Token | Used for authentication of user sessions. See "Session-based authentication" under Redfish authentication and authorization. |

# HTTP status codes and error messages

HTTP defines the status codes that are returned in response messages. When the HTTP status code indicates a failure, the response body contains an extended error resource, which provides meaningful and deterministic error semantics.

The extended-error information for the Redfish service that Dell has implemented contains error or exception information that is unique to Dell. This information provides more details and recommendations for error resolution. To learn more about extended-error information, see the *Event and Error Message Reference Guide* available at www.dell.com/manuals.

For more details about the error messages, see the following:

- Base messages: **Registries** > **BaseMessage** schema. Examples of base messages are GeneralError, PropertyUnknown, InsufficientPrivilege, and so on.
- Event and Error messages: **Registries** > **Message** schema. Examples of Event and Error messages are AMP0300, ASR0001, HWC7014, and so on.

For more information about supported status codes and error messages, see the *Redfish Scalable Platforms Management API Specification* document available at www.dmtf.org/standards/redfish.

> (i) **NOTE:**
>
> - For some URLs, if you execute an unsupported method, the response code may not indicate that the method is unsupported. To see the methods that the URL supports, see the relevant section in this document. You can also use the Get method on the URL and see the supported methods in the response.
> - If you perform a Patch operation on multiple attributes, and if some attributes do not get updated due to dependency issues, HTTP code 400 is returned.

# SSL certificates of iDRAC

iDRAC includes a web server that uses the industry-standard SSL security protocol to transfer encrypted data over a network. Built upon asymmetric encryption technology, SSL is widely accepted for providing authenticated and encrypted communication between clients and servers to prevent eavesdropping across a network.

By default, the iDRAC web server has a Dell self-signed SSL digital certificate. Redfish service reuses this certificate installed on the iDRAC web server. You can replace the default SSL certificate with a certificate signed by a well-known Certificate Authority (CA). You can replace SSL certificates using the iDRAC interfaces such as web interface, RACADM, or WSMan. For more information on managing SSL certificates of iDRAC, see the latest iDRAC User's Guide available at **Dell.com/idracmanuals**.

# Eventing

The Redfish service generates asynchronous notifications (events) that are defined by Redfish subscription for the eventing service. These events are sent to an event destination by using HTTP POST method. Events are generated when some significant change or error condition typically of time critical nature occurs. When an event occurs on the service, it notifies the clients. Redfish service must be enabled and iDRAC must be configured to create event subscriptions and to gain read-only privilege for viewing event subscriptions.

The iDRAC implementation of a Redfish service supports only HTTPS notifications. In certain situations, iDRAC may not be able to verify certificates sent by a peer. To handle such situations, iDRAC can be configured to skip certificate verification by using the attribute `iDRAC.RedfishEventing.IgnoreCertificateErrors`. This attribute can be configured to True or False (Default) using RACADM or the WS-MAN interface. Set this attribute to True if certificate validation is not required.

Redfish service provides Lifecycle and Alert events. Lifecycle events may occur when resources are created, modified, or destroyed. Alert events occur when a resource needs to indicate a significant event. Alert events may be either directly or indirectly pertaining to the resource. Examples of these kinds of event are a chassis being opened, button being pressed, cable being unplugged, or threshold being exceeded. iDRAC supports up to 20 event subscriptions.

(i) | NOTE: In this release, iDRAC supports only Alert event notifications.

If an event delivery fails, the event service of iDRAC retries delivering the failed event. The number of retries and delivery intervals can be configured using the following attributes:

- `iDRAC.RedfishEventing.DeliveryRetryAttempts`
- `iDRAC.RedfishEventing.DeliveryRetryIntervalInSeconds`

# Event delivery retry settings in RACADM

iDRAC.RedfishEventing.DeliveryRetryAttempts (Read or Write)

| | |
|---|---|
| **Description** | Specifies the number of retry attempts made for Redfish event delivery |
| **Legal values** | Value ranges from 0 to 5 |
| **Default value** | 3 |
| **Write privilege** | Configure iDRAC |

iDRAC.RedfishEventing.DeliveryRetryIntervalInSeconds (Read or Write)

| | |
|---|---|
| **Description** | Specifies the intervals (in seconds) of retry attempts made for Redfish event delivery |
| **Legal values** | Value ranges from 5 to 60 |
| **Default value** | 30 |
| **Write privilege** | Configure iDRAC |

# Eventing operations

The Redfish event service provides the following URIs:

Table 3. Eventing operations

| HTTP method type | Description | URI | Metadata reference |
|---|---|---|---|
| GET | Get detailed information about Event Service | `/redfish/v1/ EventService` | EventService.xml |
| PATCH | Property Name: ServiceEnabled  Indicates whether this service is enabled | `/redfish/v1/ EventService` | EventService_v1.xml |
| POST | Register an event notification receiver | `/redfish/v1/ EventService/ Subscriptions` | EventDestination.xml |
| DELETE | Remove a subscription | `/redfish/v1/ EventService/ Subscriptions/ <Subscription ID>` | EventService.xml |

# Redfish resources

This section describes the resource URIs and related operations that are available in the iDRAC implementation of a Redfish service API.

Topics:

- AccountService
- AttributeRegistry
- BaseMessages
- BIOS
- Chassis
- ComputerSystem
- DellAttributes
- DellBootSources
- DellBootSourcesRegistry
- DellCertificates
- DellJob
- DellManager
- DellServiceRoot
- DellUpdateService
- EthernetInterfaces
- EventDestination
- EventService
- JSONSchemas
- LogEntry
- LogService
- Manager
- ManagerAccount
- ManagerNetworkProtocol
- Role
- SerialInterfaces
- Memory collection
- Messages
- NetworkAdapter collection
- NetworkInterface collection
- OEMManager
- Power
- SecureBoot
- ServiceRoot
- Session
- SessionService
- SoftwareInventory

- Storage collection
- Processor
- SimpleStorage
- VLanNetworkInterface
- TaskService
- Thermal
- UpdateService
- VirtualMedia

# AccountService

## Description

This resource is used to represent a management account service for a Redfish implementation.

## URL

```
/redfish/v1/Managers/<ID>/AccountService
```

## Methods and privileges

**Table 4. HTTP methods and privileges for AccountService**

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

# AttributeRegistry

## Description

An Attribute Registry is a set of key-value pairs that are specific to a particular implementation or product. This schema describes the structure of a registry and also includes mechanisms for building user interfaces allowing consistent navigation of the contents.

## URL

```
/redfish/v1/Registries/ManagerAttributeRegistry/ManagerAttributeRegistry.v1_0_0.json
/redfish/v1/Systems/<ID>/Bios/BiosRegistry
```

## Methods and privileges

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Status codes

| HTTP status code | Extended information |
| --- | --- |
| 200 | Base.1.0.Success |
| 500 | Base.1.0.InternalError |

# BaseMessages

## Description

This resource is used to represent the base message registry for a Redfish implementation.

## URL

```
/redfish/v1/Registries/BaseMessages
```

## HTTP methods and privileges

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Status codes

| HTTP status code |
| --- |
| 200 |
| 400 |

**HTTP status code**

500

# BIOS

## Description

This resource is used for representing the BIOS configuration and the related resources to Reset BIOS, Change Password, and the Settings resource.

## URL

```
/redfish/v1/Systems/<ID>/Bios
```

## Methods and privileges

**Table 9. Methods and privileges for BIOS**

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Status codes

**Table 10. Status codes for BIOS**

| HTTP status code | Extended information |
| --- | --- |
| 200 | |
| 500 | Base.1.0.InternalError |

## Supported action — ResetBIOS

### Description

This action is used for resetting the BIOS attributes to default.

### URL

```
/redfish/v1/Systems/<ID>/Bios/Actions/Bios.ResetBios
```

## Methods and privileges

Table 11. Methods and privileges for ResetBIOS

| HTTP method | Required privilege |
| --- | --- |
| POST | SystemControl |

## Status codes

Table 12. Status codes for ResetBIOS

| HTTP status code | Extended information |
| --- | --- |
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 403 | Base.1.0.InsufficientPrivilege |
| 404 | Base.1.0.ResourceMissingAtURI |
| 500 | Base.1.0.InternalError |

# Supported action — ChangePassword

## Description

This action is used for changing the BIOS passwords.

## URL

```
/redfish/v1/Systems/<ID>/Bios/Actions/Bios.ChangePassword
```

## Methods and privileges

Table 13. Methods and privileges for ChangePassword

| HTTP method | Required privilege |
| --- | --- |
| POST | SystemControl |

## Updatable properties

| Property | Description |
| --- | --- |
| PasswordName | The name of the BIOS password to change |
| OldPassword | The value of the existing password |
| NewPassword | The value of the new BIOS password |

## Status codes

| HTTP status code | Extended information |
| --- | --- |
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 403 | Base.1.0.InsufficientPrivilege |
| 404 | Base.1.0.ResourceMissingAtURI |
| 500 | Base.1.0.InternalError |

# Supported action — ClearPending

## Description

This action is used for clearing the pending values.

## URL

```
/redfish/v1/Systems/<ID>/Bios/Actions/Oem/DellManager.ClearPending
```

## HTTP methods and privileges

| HTTP method | Required privilege |
| --- | --- |
| POST | SystemControl |

# Status codes

| HTTP status code | Extended information |
| --- | --- |
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 403 | Base.1.0.InsufficientPrivilege |
| 404 | Base.1.0.ResourceMissingAtURI |
| 500 | Base.1.0.InternalError |

# Settings resource

## Description

This resource is used for representing the BIOS pending configuration and related resources to clear pending and navigation to Jobs resource.

## URL

```
/redfish/v1/Systems/<ID>/Bios/Settings
```

## HTTP methods and privileges

Table 18. HTTP methods and privileges for the Settings resource

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |
| PATCH | SystemControl |

## Updatable properties

Table 19. Properties for the Settings resource

| Property | Description |
| --- | --- |
| Attributes | Collection of all the attributes and their values supported by the BIOS configuration |

## Status codes

**Table 20. Status codes for the Settings resource**

| HTTP status code | Extended information |
|---|---|
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 403 | Base.1.0. InsufficientPrivilege |
| 500 | Base.1.0.InternalError |

# Chassis

## Description

This resource is used to represent a chassis or other physical enclosure for a Redfish implementation.

## URL

```
/redfish/v1/Chassis
```

## HTTP methods and privileges

**Table 21. HTTP methods and privileges for Chassis**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

|---|---|
| 200 | Base.1.0.Success |
| 500 | Base.1.0.InternalError |

# URL

```
/redfish/v1/Systems/<ID>/SecureBoot/Certificates/<CertificateStore-ID>
```

# HTTP methods and privileges

**Table 56. HTTP methods and privileges for the instance of CertificateStore**

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| POST | SystemControl |

# Updatable properties

**Table 57. Properties for the instance of CertificateStore**

| Parameter | Description |
|---|---|
| CryptographicHash | A string providing the Cryptographic Hash value of SHA256, SHA384, or SHA512. |

# Status codes

**Table 58. Status codes for the instance of CertificateStore**

| HTTP status code | Extended information |
|---|---|
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 403 | Base.1.0. InsufficientPrivilege |
| 500 | Base.1.0.InternalError |

# URL

```
/redfish/v1/Systems/<ID>/SecureBoot/Certificates/<CertificateStore-ID>/<Certificate-ID>
```

## HTTP methods and privileges

**Table 59. HTTP methods and privileges for instance of Certificate**

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| DELETE | SystemControl |

ⓘ **NOTE:** By default, GET requests on the Certificate member resource generate an output of `application/json`. Use GET request with Accept header `application/pkix-cert` to download certificate and use `application/octet-stream` to download the Hash files.

## Status codes

**Table 60. Status codes for the instance of Certificate**

| HTTP status code | Extended information |
|---|---|
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 403 | Base.1.0. InsufficientPrivilege |
| 500 | Base.1.0.InternalError |

# DellJob

## Description

This resource represents the Dell-specific implementation of a scheduling resource for pending configuration.

## URL

```
/redfish/v1/Managers/<ID>/Jobs
```

## HTTP methods and privileges

**Table 61. HTTP methods and privileges for DellJob**

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| POST | SystemControl |

# Properties required for job creation

| Parameter | Description |
|---|---|
| TargetSettingsURI | Settings object resource URI |
| StartTime | Scheduled start time |
| EndTime | Scheduled end time |

# Navigation URL

```
/redfish/v1/Managers/<ID>/Jobs
```

# HTTP methods and privileges

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| DELETE | SystemControl |

# Status codes

| HTTP status code | Extended information |
| --- | --- |
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 403 | Base.1.0. InsufficientPrivilege |
| 404 | Base.1.0.ResourceMissingAtURI |
| 500 | Base.1.0.InternalError |

# DellManager

## Description

This resource is used to represent a Redfish OEM extension of management sub-system.

## URL

```
/redfish/v1/Managers
```

## Supported action — ResetToDefaults

### Description

This defines the name of the OEM action supported when used in conjunction with a POST operation to this resource. When issued, this operation resets the Manager attributes to default settings.

### URL

```
/redfish/v1/Managers/<ID>/Actions/Oem/DellManager.ResetToDefaults
```

### HTTP methods and privileges

Table 66. HTTP methods and privileges for ResetToDefaults

| HTTP method | Required privilege |
| --- | --- |
| POST | SystemControl |

## Status codes

**Table 67. Status codes for ResetToDefaults**

| HTTP status code | Extended information |
|---|---|
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 500 | Base.1.0.InternalError |

## Updatable properties

**Table 68. Supported properties and values for ResetToDefaults**

| Property | Values |
|---|---|
| ResetType | • All<br>• ResetAllWithRootDefaults<br>• Default |

# DellServiceRoot

## Description

This object represents the Redfish OEM extensions for root service.

## URL

```
/redfish/v1
```

## HTTP methods and privileges

**Table 69. HTTP methods and privileges for DellServiceRoot**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Properties

**Table 70. Properties for DellServiceRoot**

| Property | Description |
| --- | --- |
| ManagerMACAddress | iDRAC MAC address |
| IsBranded | Integer |
| ServiceTag | System Service Tag |

# DellUpdateService

## Description

This action is used to perform firmware updates.

## Supported action — Install

## Description

This resource is used to represent extension of the Update Service schema of Redfish.

Starting from the iDRAC version 3.15.15.15 release, you can use this action to update only one component at a time. Although the SoftwareIdentityURIs parameter of the Install OEM action is of the type Collection, only one relative URI of the firmware inventory to be installed is allowed. If you attempt to update multiple components at once, error SYS442 is returned. To update multiple components, perform the updates one at a time.

## URL

```
/redfish/v1/UpdateService/Actions/Oem/DellUpdateService.Install
```

## HTTP methods and privileges

**Table 71. HTTP methods and privileges for Install**

| HTTP method | Required privilege |
| --- | --- |
| POST | <ul><li>**.d9** file type — ConfigureManager</li><li>**.pm** file type — ConfigureManager</li><li>**.exe** file type — ConfigureSelf</li></ul> |

## Updatable properties

| Property | Values |
|---|---|
| InstallUpon | • Now<br>• NowAndReboot<br>• NextReboot |

## Status codes

| 500 | Base.1.0.InternalError | RAC964 |
| 503 | | SUP0108 |

# EthernetInterfaces

## Description

This resource is used to represent NIC resources as part of the Redfish specification. It also updates the properties of Manager Ethernet Interface.

> (i) NOTE: Only device FQDDs that are associated with physical network controllers are displayed. If iSM is installed and running, and there are only software Ethernet interfaces available on the system, a response code of 200 and an empty collection is returned.

## URL

```
/redfish/v1/Managers/<ID>/EthernetInterfaces
```

# HTTP methods and privileges

| HTTP method | Required privilege |
|---|---|
| GET | Login |

# Ethernet — Instance

## URL

`/redfish/v1/Managers/<ManagerInstanceID>/EthernetInterfaces/<EthernetInstanceID>`

## HTTP methods and privileges

Table 75. HTTP methods and privileges for instance of EthernetInterfaces

| HTTP method | Required privilege |
|---|---|
| PATCH | ConfigureManager |

## Properties

Table 76. Properties for EthernetInterfaces

| Property | Description |
|---|---|
| Hostname | Updates hostname |
| IPv4 | Updates IPv4 |
| IPv6 | Updates IPv6 |
| IPv6Static | Updates IPv6Static |

## Status codes and error message codes

**Table 119. Status codes for the instance of the resource**

| HTTP status code | Extended information |
| --- | --- |
| 200 | Base.1.0.success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList<br>• Base.1.0.PropertyUnknown<br>• Base.1.0.PropertyNotWritable<br>• Base.1.0.PropertyValueFormatError |
| 500 | Base.1.0.InternalError |

# Updatable properties

**Table 120. Properties and values for SerialInterfaces**

| Property | Values |
| --- | --- |
| SignalType | Rs232 |
| BitRate | • 9600<br>• 19200<br>• 38400<br>• 57600<br>• 115200 |

| Property | Values |
|---|---|
| Parity | None |
| DataBits | 8 |
| StopBits | 1 |
| FlowControl | Hardware |
| PinOut | Cisco |
| ConnectorType | DB9 Male |

# Memory collection

## Description

This resource is used to represent the collection of server memory, including DIMMs and nonvolatile DIMMs (NVDIMMs), for a Redfish implementation.

## URL

```
/redfish/v1/Systems/System.Embedded.1/Memory
```

## HTTP methods and privileges

**Table 121. HTTP methods and privileges for the resource**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

**Table 122. Status codes**

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | Base.1.0.0.Success | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# Memory — Instance

## Description

This resource is used to represent the memory instance for a Redfish implementation.

## URL

`/redfish/v1/Systems/System.Embedded.1/Memory/iDRAC.Embedded.1#DIMMSlotA1/`

## HTTP methods and privileges

Table 123. HTTP methods and privileges for the instance of the resource

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

Table 124. Status codes

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | Base.1.0.0.Success | |
| 404 | Base.1.0.InternalError | SYS403 |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# Memory — Metrics

## Description

This resource is used to represent the memory statistics of a single memory instance for a Redfish implementation.

## URL

`/redfish/v1/Systems/System.Embedded.1/Memory/iDRAC.Embedded.1#DIMMSlotA1/Metrics`

## HTTP methods and privileges

Table 125. HTTP methods and privileges for the resource

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | Base.1.0.0.success | RAC0690 |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# Messages

## Description

This resource is used to represent a Event and Error message registry for a Redfish implementation.

## URL

```
/redfish/v1/Registries/Messages
```

## HTTP methods and privileges

Table 127. HTTP methods and privileges for Messages

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

| HTTP status code |
|---|
| 200 |
| 400 |
| 500 |

# NetworkAdapter collection

## Description

This resource is used to represent the collection of server network adapters for a Redfish implementation.

(i) **NOTE:** The Manufacturer, Model, Serial Number, and Part Number attributes are not applicable for embedded NICs.

# URL

`/redfish/v1/Systems/System.Embedded.1/NetworkAdapters`

# HTTP methods and privileges

**Table 129. HTTP methods and privileges for NetworkAdapter**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

# Status codes

**Table 130. Status codes**

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# NetworkAdapter — Instance

## Description

This resource is used to represent an instance of a server network adapter for a Redfish implementation.

## URL

`/redfish/v1/Systems/System.Embedded.1/NetworkAdapters/<NetworkAdapter-Id>`

## HTTP methods and privileges

**Table 131. HTTP methods and privileges for the instance of NetworkAdapter**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# NetworkPort

## Description

This resource is used to represent the collection of NetworkPort.

## URL

```
/redfish/v1/Systems/System.Embedded.1/NetworkInterfaces/<NetworkInterface-Id>/NetworkPorts
(Logical)
```

```
/redfish/v1/Systems/System.Embedded.1/NetworkAdapters/<NetworkAdapters-Id>/NetworkPorts
(Physical)
```

## HTTP methods and privileges

Table 133. HTTP methods and privileges for NetworkPort

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

Table 134. Status codes

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

## NetworkPort — Instance

## Description

This resource is used to represent discrete physical port capable of connecting to a network.

## URL

```
/redfish/v1/Systems/System.Embedded.1/NetworkAdapters/<NetworkAdapters-Id/NetworkPorts/
<NetworkPort-Id>
```

## HTTP methods and privileges

**Table 135. HTTP methods and privileges for the instance of NetworkPort**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

**Table 136. Status codes**

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# NetworkPort — Settings

## Description

This resource is used to set new values and create jobs to update the attributes of the discrete physical port.

## URL

```
/redfish/v1/Systems/System.Embedded.1/NetworkAdapters/<NetworkAdapters-Id/NetworkPorts/
<NetworkPort-Id>/Settings
```

## HTTP methods and privileges

**Table 137. HTTP methods and privileges for the resource**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

**Table 138. Status codes**

| HTTP status code | Extended information |
|---|---|
| 200 | |
| 400 | |
| 500 | Base.1.0.InternalError |

# NetworkDeviceFunctions

## Description

This resource is used to represent the collection of NetworkDeviceFunction.

## URL

```
/redfish/v1/Systems/System.Embedded.1/NetworkAdapters/<NetworkAdapters-Id/NetworkDeviceFunctions
```

## HTTP methods and privileges

**Table 139. HTTP methods and privileges for NetworkDeviceFunctions**

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Status codes

**Table 140. Status codes**

| HTTP status code | Extended information | Error message code |
| --- | --- | --- |
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

## NetworkDeviceFunctions — Instance

### Description

This resource is used to represent a logical interface exposed by the network adapter.

### URL

```
/redfish/v1/Systems/System.Embedded.1/NetworkAdapters/<NetworkAdapters-Id/
NetworkDeviceFunctions/<NetworkDeviceFunction-Id>
```

### HTTP methods and privileges

**Table 141. HTTP methods and privileges for the instance of NetworkDeviceFunctions**

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

### Status codes

**Table 142. Status codes**

| HTTP status code | Extended information | Error message code |
| --- | --- | --- |
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# NetworkDeviceFunctions — Settings

## Description

This resource is used to set the new value and create job to update the attributes of the logical interface exposed by the network adapter.

## URL

```
/redfish/v1/Systems/System.Embedded.1/NetworkAdapters/<NetworkAdapters-Id/
NetworkDeviceFunctions/<NetworkDeviceFunction-Id>/Settings
```

## HTTP methods and privileges

### Table 143. HTTP methods and privileges for the resource

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |
| PATCH | Login + SystemControl |

## Required parameters

### Table 144. Parameters for NetworkDeviceFunction Settings

| Parameter | Type | Description |
| --- | --- | --- |
| Status | | |
| MaxVirtualFunctions | Int64 | The number of virtual functions (VFs) that are available for this Network Device Function. |
| NetDevFuncCapabilities | Collection(NetworkDeviceFunction.v1_0_0.NetworkDeviceTechology) | Capabilities of this network device function.<br><br>ⓘ NOTE: The values of NetDevFuncCapabilities are determined by the port that the partition belongs to. The values of NetDevFuncCapabilities for all the partitions belonging to a particular port are the same. |
| NetDevFuncType | NetworkDeviceFunction.v1_0_0.NetworkDeviceTechology | The configured capability of this network device function. |
| **FibreChannel** | | |
| WWPN | String | The effective current World-Wide Port Name (WWPN) of this network device function (physical function). If an assignable WWPN is not supported, WWPN is a read only alias of the PermanentWWPN. |
| PermanentWWPN | String | PermanentWWPN is the permanent WWPN address assigned to this network device function (physical function). |

| Parameter | Type | Description |
|---|---|---|
| WWNN | String | The effective current World-Wide Node Name (WWNN) of this network device function (physical function). If an assignable WWNN is not supported, WWNN is a read only alias of the PermanentWWNN. |
| WWNSource | NetworkDeviceFunction.v1_0_0.WWNSource | The configuration source of the World-Wide Names (WWNs) for this connection (WWPN and WWNN). |
| FCoELocalVLANId | Int64 | For FCoE connections, The VLAN ID configured locally by setting this property. This value shall be used for FCoE traffic to this network device function during boot unless AllowFIPVLANDiscovery is true and a valid FCoE VLAN ID is found via the FIP VLAN Discovery Protocol. |
| FCoEActiveVLANId | Int64 | The active FCoE VLAN ID. |
| **BootTargets** | | |
| WWPN | String | World-Wide Port Name (WWPN) to boot from. |
| LUNID | String | The Logical Unit Number (LUN) ID to boot from on the device referred to by the corresponding WWPN. |
| **Ethernet** | | |
| MACAddress | String | The effective current MAC Address of this network device function. If an assignable MAC address is not supported, this is a read-only alias of the PermanentMACAddress. |
| PermanentMACAddress | String | This is the permanent MAC address assigned to this network device function (physical function). |
| MTUSize | Int64 | The Maximum Transmission Unit (MTU) configured for this Network Device Function. This value serves as a default for the OS driver when booting. The value only takes effect on boot. |
| **iSCSIBoot** | | |
| IPAddressType | NetworkDeviceFunction.v1_0_0.IPAddressType | The type of IP address (IPv6 or IPv4) being populated in the iSCSIBoot IP address fields. Mixing of IPv6 and IPv4 addresses on the same network device function shall not be permissible. |
| InitiatorIPAddress | String | The IPv6 or IPv4 address of the iSCSI boot initiator. |
| InitiatorName | String | The iSCSI boot initiator name. |

| Parameter | Type | Description |
| --- | --- | --- |
| InitiatorDefaultGateway | String | The IPv6 or IPv4 iSCSI boot default gateway. |
| InitiatorNetmask | String | The IPv6 or IPv4 netmask of the iSCSI boot initiator. |
| TargetInfoViaDHCP | String | A boolean indicating whether the iSCSI boot target name, LUN, IP address, and netmask should be obtained from DHCP. |
| PrimaryTargetName | String | The name of the primary iSCSI boot target (iSCSI Qualified Name, IQN). |
| PrimaryTargetIPAddress | String | The IP address (IPv6 or IPv4) for the primary iSCSI boot target. |
| PrimaryTargetTCPPort | Int64 | The TCP port for the primary iSCSI boot target. |
| PrimaryLUN | Int64 | The logical unit number (LUN) for the primary iSCSI boot target. |
| PrimaryVLANEnable | Boolean | It indicates if this VLAN is enabled for the primary iSCSI boot target. |
| PrimaryVLANId | Int64 | The 802.1q VLAN ID to use for iSCSI boot from the primary target. This VLAN ID is only used if PrimaryVLANEnable is true. |
| PrimaryDNS | String | The IPv6 or IPv4 address of the primary DNS server for the iSCSI boot initiator. |
| SecondaryTargetName | String | The name of the Secondary iSCSI boot target (iSCSI Qualified Name, IQN). |
| SecondaryTargetIPAddress | String | The IP address (IPv6 or IPv4) for the Secondary iSCSI boot target. |
| SecondaryTargetTCPPort | Int64 | The TCP port for the Secondary iSCSI boot target. |
| SecondaryLUN | Int64 | The logical unit number (LUN) for the Secondary iSCSI boot target. |
| SecondaryVLANEnable | Boolean | It indicates if this VLAN is enabled for the Secondary iSCSI boot target. |
| SecondaryVLANId | Int64 | The 802.1q VLAN ID to use for iSCSI boot from the Secondary target. This VLAN ID is only used if SecondaryVLANEnable is true. |
| SecondaryDNS | String | The IPv6 or IPv4 address of the Secondary DNS server for the iSCSI boot initiator. |
| IPMaskDNSViaDHCP | Boolean | A boolean indicating whether the iSCSI boot initiator uses DHCP to obtain the iniator name, IP address, and netmask. |
| AuthenticationMethod | NetworkDeviceFunction.v1_0_0.AuthenticationMethod | The iSCSI boot authentication method for this network device function. |
| CHAPUsername | String | The username for CHAP authentication. |

| Parameter | Type | Description |
|---|---|---|
| CHAPSecret | String | The shared secret for CHAP authentication. |

## Status codes

**Table 145. Status codes**

| HTTP status code | Extended information | Error message code |

| 500 | Base.1.0.InternalError | |

# NetworkInterface — Contained resources

## Description

NetworkInterface contains references linking NetworkAdapter, NetworkPort, and NetworkDeviceFunction resources and represents the functionality available to the containing system.

## URL

`/redfish/v1/Systems/System.Embedded.1/NetworkInterfaces/<NetworkInterface-Id>`

## HTTP methods and privileges

**Table 148. HTTP methods and privileges for instance of NetworkInterface**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

**Table 149. Status codes**

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# OEMManager

## Description

This resource is used to export, import, and preview the Server Configuration Profile (SCP) files Redfish implementation.

> ⓘ NOTE: For SCP export, import, and preview, if Lifecycle Controller is disabled, ensure that you enable Lifecycle Controller and retry the operation. To enable Lifecycle Controller, run the following command:
>
> `racadm set LifecycleController.LCAttributes.LifecycleControllerState 1`

Redfish SCP is an OEM action and requires OEM privileges *ALL* and role as *ADMIN*. Redfish privileges are not applicable for SCP.

For more information about this schema, the location header, and other details, see the *RESTful Server Configuration with iDRAC REST API* white paper at [www.delltechcenter.com](www.delltechcenter.com).

# Supported action — Export, Import, and Preview

**Table 150. Supported HTTP methods and features**

| HTTP method | Feature |
|---|---|
| POST | Exporting configuration |
| POST | Importing configuration |
| POST | Preview configuration |

# Export resource URL and response details

## URL

`redfish/v1/Managers/<id>/Actions/Oem/EID_674_Manager.ExportSystemConfiguration`

## Status codes

**Table 151. Status codes for the action**

| HTTP status code | Extended information |
|---|---|
| 202 | Accepted |

## Properties and values

**Table 152. Properties and values for the action**

| Property | Values |
|---|---|
| ExportFormat | XML, JSON |
| ExportUse | Default, Clone, Replace |
| IncludeInExport | Default, IncludeReadOnly, IncludePasswordHashValues |
| ShareParameters | See Share parameters and values. |

# Import resource URL and response details

## URL

`redfish/v1/Managers/<id>/Actions/Oem/EID_674_Manager.ImportSystemConfiguration`

## Status codes

**Table 153. Status codes for the action**

| HTTP status code | Extended information |
|---|---|
| 202 | Accepted |

## Properties and values

| Property | Values |
| --- | --- |
| ImportBuffer | Buffer content to perform import. Required only for local store and not required for CIFS, NFS, HTTP, or HTTPS. |
| ShutdownType | Graceful, Forced, NoReboot |
| HostPowerState | On, Off |
| TimeToWait | The time to wait for the host to shut down. Default and minimum value is 300 seconds. Maximum value is 3600 seconds. |
| ShareParameters | See Share parameters and values. |

# Preview resource URL and response details

## URL

```
redfish/v1/Managers/<id>/Actions/Oem/EID_674_Manager.ImportSystemConfigurationPreview
```

## Status codes

| HTTP status code | Extended information |
| --- | --- |
| 202 | Accepted |

# Share parameters and values

| Parameter | Values |
| --- | --- |
| IPAddress | IP address of the network share |
| ShareName | Name of network share |
| FileName | File name for the SCP |
| ShareType | CIFS, NFS, HTTP, HTTPS |
| Username | User name to log on to the share — for CIFS share only. |
| Password | Password to log on to the share — for CIFS share only. |
| Workgroup | Workgroup name to log on to the share |
| Target | Can be the component name or an FQDD. The default value is ALL. |

# Power

## Description

This resource is used to represent a power metrics resource for a Redfish implementation.

## URL

```
/redfish/v1/Chassis/<ID>/Power
```

## HTTP methods and privileges

**Table 157. HTTP methods and privileges for Power**

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Status codes

**Table 158. Status codes for Power**

| HTTP status code | Extended information |
| --- | --- |
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList<br>• Base.1.0.PropertyUnknown<br>• Base.1.0.PropertyNotWritable<br>• Base.1.0.PropertyValueFormatError |
| 403 | Insufficient privileges. |
| 500 | |

## Reference Properties

## URL

```
/redfish/v1/Chassis/<ID>/Power/PowerControl
```

## Description

Updates the properties of PowerControl in Chassis Collection.

## HTTP methods and privileges

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| PATCH | ConfigureManager |

## Updatable properties

| Property | Description |
|---|---|
| PowerLimit | Updates PowerLimit |

## Status codes

| HTTP status code | Extended information |
|---|---|
| 200 | Base.1.0.success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList<br>• Base.1.0.PropertyUnknown<br>• Base.1.0.PropertyNotWritable<br>• Base.1.0.PropertyValueFormatError |
| 500 | Base.1.0.InternalError |

# Power — Power Supply Units

## URL

`/redfish/v1/Chassis/<ID>/Power/PowerSupplies/<ID>`

## Description

Provides details of the power supplies that are associated with the system or device.

## HTTP methods and privileges

**Table 162. HTTP methods and privileges for PowerSupplies**

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Status codes

**Table 163. Status codes for PowerSupplies**

| HTTP status code | Extended information |
| --- | --- |
| 200 | |
| 400 | |
| 403 | Insufficient privileges. |
| 500 | |

# Power — Voltage Sensor

## URL

```
/redfish/v1/Chassis/<ID>/Sensors/Voltages/<ID>
```

## Description

Provides the voltage sensor information.

## HTTP methods and privileges

**Table 164. HTTP methods and privileges for Voltages Sensor**

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Status codes

**Table 165. Status codes for Voltages Sensor**

| HTTP status code |
| --- |
| 200 |
| 400 |
| 500 |

> (i) **NOTE:** On PowerEdge FX2 systems, iDRAC can display additional instrumentation data from the sensors on the server only if the Chassis Monitoring setting is set to enabled on iDRAC and CMC.

## Power — Redundancy

### URL

`/redfish/v1/Chassis/<ID>/Power/Redundancy/<ID>`

### Description

This object represents the Redundancy element property.

### HTTP methods and privileges

Table 166. HTTP methods and privileges for Power Redundancy

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

### Status codes

Table 167. Status codes for Power Redundancy

| HTTP status code |
| --- |
| 200 |
| 400 |
| 500 |

# SecureBoot

## Description

This resource contains UEFI Secure Boot information. It represents properties for managing the UEFI Secure Boot functionality of a system.

## URL

`/redfish/v1/Systems/<ID>/SecureBoot`

## HTTP methods and privileges

Table 168. HTTP methods and privileges for SecureBoot

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |
| PATCH | SystemControl |

# Updatable properties

| Property | Description |
|---|---|
| SecureBootEnable | Enable or disable UEFI Secure Boot (takes effect on next boot). |

# Status codes

Table 170. Status codes for SecureBoot

| HTTP status code | Extended information |
|---|---|
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 403 | Base.1.0. InsufficientPrivilege |
| 404 | Base.1.0.ResourceMissingAtURI |
| 500 | Base.1.0.InternalError |

# Supported action — ResetKeys

## Description

This action is used to reset the Secure Boot keys.

## URL

`/redfish/v1/Systems/<ID>/SecureBoot/Actions/SecureBoot.ResetKeys`

## HTTP methods and privileges

Table 171. HTTP methods and privileges for ResetKeys

| HTTP method | Required privilege |
|---|---|
| POST | SystemControl |

## Updatable properties

**Table 172. Properties and values for ResetKeys**

| Parameter | Description |
|---|---|
| ResetKeysType | • ResetAllKeysToDefault<br>• DeleteAllKeys<br>• DeletePK<br>• ResetPK<br>• ResetKEK<br>• ResetDB<br>• ResetDBX |

## Status codes

**Table 173. Status codes for ResetKeys**

| HTTP status code | Extended information |
|---|---|
| 200 | Base.1.0.Success |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList |
| 500 | Base.1.0.InternalError |

# ServiceRoot

## Description

This object represents the root Redfish service. All values for resources in this schema must comply with the requirements described in the Redfish specification.

## URL

```
/redfish/v1
```

## HTTP methods and privileges

**Table 174. HTTP methods and privileges for ServiceRoot**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

# Status codes

| HTTP status code | Extended information |
|---|---|
| 200 | |
| 400 | |
| 403 | Insufficient privileges. |
| 500 | |

# Session

## URL

```
/redfish/v1/Sessions
```

## Description

This resource is used to represent a session for a Redfish implementation.

## HTTP methods and privileges

Table 176. HTTP methods and privileges for Session

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| POST | ConfigureManager |

## Updatable properties

Table 177. Properties and values for Session

| Parameter | Description |
|---|---|
| username | User name |
| password | Password |

# Status codes

| HTTP status code | Extended information |
| --- | --- |
| 200 | |
| 201 | |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyValueNotInList<br>• Base.1.0.PropertyUnknown<br>• Base.1.0.PropertyNotWritable<br>• Base.1.0.PropertyValueFormatError |
| 500 | Base.1.0.InternalError |

# Action — Delete

## URL

```
/redfish/v1/Sessions/<session-id>
```

## Description

Performs delete operation on the session ID.

## HTTP methods and privileges

Table 179. HTTP methods and privileges for Delete

| HTTP method | Required privilege |
| --- | --- |
| DELETE | Login |

## Status codes

Table 180. Status codes for Delete

| HTTP status code |
| --- |
| 200 |
| 400 |
| 500 |

# SessionService

## Description

This resource is used to represent the Session Service properties for a Redfish implementation.

## URL

```
/redfish/v1/SessionService
```

## HTTP methods and privileges

Table 181. HTTP methods and privileges for SessionService

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |
| PATCH | ConfigureManager |

ⓘ NOTE: **The properties for this resource are inherited from the web-server properties.**

## Updatable properties

Table 182. Properties and values for SessionService

| Property | Description |
| --- | --- |
| SessionTimeout | Updates web server timeout |

## Status codes

Table 183. Status codes for SessionService

| HTTP status code | Extended information |
| --- | --- |
| 200 | Base.1.0.success |
| 400 | <ul><li>Base.1.0.PropertyValueTypeError</li><li>Base.1.0.PropertyValueNotInList</li><li>Base.1.0.PropertyUnknown</li><li>Base.1.0.PropertyNotWritable</li><li>Base.1.0.PropertyValueFormatError</li></ul> |
| 500 | Base.1.0.InternalError |

# SoftwareInventory

## Description

This represents the inventory of firmware components.

## URL

`/redfish/v1/UpdateService/FirmwareInventory`

## HTTP methods and privileges

**Table 184. HTTP methods and privileges for SoftwareInventory**

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| POST | • **.d9** file type — ConfigureManager<br>• **.pm** file type — ConfigureManager<br>• **.exe** file type — ConfigureSelf |

## Navigation URL

`/redfish/v1/UpdateService/FirmwareInventory/<ID>`

## HTTP methods and privileges

**Table 185. HTTP methods and privileges for the instance of SoftwareInventory**

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| DELETE — Supported only for uploaded packages | • **.d9** file type — ConfigureManager<br>• **.pm** file type — ConfigureManager<br>• **.exe** file type — ConfigureSelf |

# Storage collection

## Description

This resource is used to represent the collection of the storage subsystem under ComputerSystem.

## URL

```
/redfish/v1/Systems/System.Embedded.1/Storage
```

## HTTP methods and privileges

Table 187. HTTP methods and privileges for Storage

| HTTP method | Required privilege |
|---|---|
| GET | Login |

# Status codes

Table 188. Status codes

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

ⓘ **NOTE: For more information on supported storage devices and operations, see the iDRAC User's Guide available at www.dell.com/idracmanuals.**

# Storage — Instance

## Description

This resource is used to return the status of the storage subsystem. It also returns the navigation URLs to the StorageContoller, Drive, and Volume collections, and the link to Chassis.

ⓘ **NOTE: AutoExpand is True for StorageController.**

## URL

`/redfish/v1/Systems/System.Embedded.1/Storage/<StorageController-Id>`

## HTTP methods and privileges

Table 189. HTTP methods and privileges for the instance of Storage

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

Table 190. Status codes

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# StorageController

## Description

This resource is used to represent the properties of the storage controller.

ⓘ NOTE: **The Links property represents NULL, because the Redundancy is not supported for StorageController.**

ⓘ NOTE: **StorageController is not applicable for NVMe.**

## URL

`/redfish/v1/Systems/System.Embedded.1/StorageControllers/<StorageController-Id>`

## HTTP methods and privileges

Table 191. HTTP methods and privileges for StorageController

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

Table 192. Status codes

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

## Volume

### Description

This resource is used to represent the collection of Volumes, as presented in the operating system.

ⓘ NOTE: **The POST operation on the Volume collection is supported only on RAID, software RAID, and BOSS controllers.**

### URL

`/redfish/v1/Systems/System.Embedded.1/Storage/<StorageController-Id>/Volumes/`

## HTTP methods and privileges

### Table 193. HTTP methods and privileges for Volume

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |
| POST | Login + SystemControl |

## Parameters

### Table 194. Parameters for POST operation

| Parameter | Description |
| --- | --- |
| VolumeType | The type of the associated volume |
| CapacityBytes | The size in bytes of this volume — Optional |
| Name | Name of the virtual disk — Optional |
| OptimumIOSizeBytes | Stripe size for virtual disk — Optional |
| Drives | An array of references to the drives that contain this volume. This references drives that either wholly or partly contain this volume. |

## Status codes

### Table 195. Status codes

| HTTP status code | Extended information | Error message code |
| --- | --- | --- |
| 200 | | |
| 202 | | |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyUnknown | |
| 403 | Base.1.0.InsufficientPrivilege | RAC0506 |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

## Volume — Instance

### Description

Volume instance represent the properties used to describe a volume. The volume can be a virtual disk or other logical storage entities as presented to the operating system.

ⓘ | NOTE: The DELETE operation on an instance of Volume is supported only on RAID, software RAID, and BOSS controllers.

### URL

```
/redfish/v1/Systems/System.Embedded.1/Storage/<StorageController-Id>/Volumes/<Volume-Id>
```

## Settings URL

```
/redfish/v1/Systems/System.Embedded.1/Storage/<StorageController-Id>/Volumes/<Volume-Id>/
Settings
```

## HTTP methods and privileges

**Table 196. HTTP methods and privileges for the instance of Volume**

| HTTP method | Required privilege |
|---|---|
| GET | Login |
| PATCH | Login + SystemControl |
| DELETE | Login + SystemControl |

## Required parameters

**Table 197. Required parameters**

| Parameter | Description |
|---|---|
| Encrypted | Whether the volume is encrypted. |
| @Redfish.SettingsApplyTime | Defines when the settings are applied. This is supported on the Settings URL. — Optional |

## Status codes

**Table 198. Status codes**

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 202 | | |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyUnknown | |
| 403 | Base.1.0.InsufficientPrivilege | RAC0506 |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

## Supported action — Initialize

Description

This action is used to prepare the contents of the volume for use by the system.

URL

```
/redfish/v1/Systems/System.Embedded.1/Storage/<StorageController-Id>/Volumes/<Volume-Id>/
Actions/Volume.Initialize
```

HTTP methods and privileges

**Table 199. HTTP methods and privileges for the action**

| HTTP method | Required privilege |
|---|---|
| POST | Login + SystemControl |

Required parameters

**Table 200. Required parameter for the action**

| Parameter | Description |
|---|---|
| InitializeType | The type of initialization to be performed either Fast or Slow |

Status codes

**Table 201. Status codes**

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 202 | | |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyUnknown | |
| 403 | Base.1.0.InsufficientPrivilege | RAC0506 |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

## Supported action — CheckConsistency

Description

This action is used to force a check of the volume's parity or redundant data to ensure it matches the calculated values. It does not require any input parameters.

To check the status of the operation, use the task that is created when you start the action. You can also check the **Operations** property in the response body.

URL

```
/redfish/v1/Systems/System.Embedded.1/Storage/<StorageController-Id>/Volumes/<Volume-Id>/
Actions/Volume.CheckConsistency
```

HTTP methods and privileges

**Table 202. HTTP methods and privileges for the action**

| HTTP method | Required privilege |
|---|---|
| POST | Login + SystemControl |

Status codes

**Table 203. Status codes**

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 202 | | |
| 400 | • Base.1.0.PropertyValueTypeError | |

| HTTP status code | Extended information | Error message code |
|---|---|---|
| | • Base.1.0.PropertyUnknown | |
| 403 | Base.1.0.InsufficientPrivilege | RAC0506 |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# Drives

## Description

This resource is used to represent the physical disks such as HDDs, SSDs, and NVMe SSDs.

## URL

```
/redfish/v1/Systems/System.Embedded.1/Storage/<StorageController-Id>/Drives/<Drive-Id>
```

## HTTP methods and privileges

**Table 204. HTTP methods and privileges for Drives**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

**Table 205. Status codes**

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

## Supported action — SecureErase

## Description

This action is used to perform instant Secure Erase on ISE-compliant HDDs, SEDs, SSDs, and NVME SSDs. It does not require any input parameters.

## URL

```
/redfish/v1/Systems/System.Embedded.1/Storage/<StorageController-Id>/Drives/<Drive-Id>/Actions/
Drive.SecureErase
```

### HTTP methods and privileges

| HTTP method | Required privilege |
| --- | --- |
| POST | Login + SystemControl |

### Status codes

| HTTP status code | Extended information | Error message code |
| --- | --- | --- |
| 202 | | |
| 400 | • Base.1.0.PropertyValueTypeError<br>• Base.1.0.PropertyUnknown | |
| 403 | Base.1.0.InsufficientPrivilege | RAC0506 |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# Storage chassis

## Description

This resource is used to represent storage chassis such as backplanes and JBODs.

ⓘ NOTE: **The storage chassis does not support Chassis Reset .**

## URL

```
/redfish/v1/Chassis/<Chassis-Id>
```

## Settings URL

```
/redfish/v1/Chassis/<Chassis-Id>/Settings
```

## HTTP methods and privileges

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Required parameters

| Parameter | Type | Description |
|---|---|---|
| AssetTag | String | The user assigned asset tag for this chassis. |
| @Redfish.SettingsApplyTime | Complex | Define when the settings are applied. This is supported on the Settings URL. |

## Status codes

Table 210. Status codes

| HTTP status code | Extended information | Error message code |
|---|---|---|
| 200 | | |
| 405 | Base.1.0.GeneralError | SYS402 |
| 500 | Base.1.0.InternalError | |

# Processor

## Description

This schema defines the processor resource. It represents the properties of a processor attached to a system.

## URL

```
/redfish/v1/Systems/<ID>/Processors
```

## HTTP methods and privileges

Table 211. HTTP methods and privileges for Processor

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

| HTTP status code |
| --- |
| 200 |
| 400 |
| 500 |

## Properties and values

| Property | Values |
| --- | --- |
| ProcessorType | CPU |
| ProcessorArchitecture | x86 |
| InstructionSet | x86-64 |

## Implementation notes

Some of the properties in this schema depend on the installed BIOS version. If a compatible BIOS version is not installed, some of the properties may not be supported on this resource.

# SimpleStorage

## Description

This property contains the UEFI device path used to identify and locate a specific storage controller.

## URL

`/redfish/v1/Systems/System.Embedded.1/SimpleStorage/Controllers`

## HTTP methods and privileges

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

## Status codes

**Table 215. Status codes for SimpleStorage**

| HTTP status code | Extended information |
| --- | --- |
| 200 | |
| 400 | |
| 403 | Insufficient privileges. |
| 500 | |

# VLanNetworkInterface

## Description

The value of this property indicates if VLAN is enabled for this interface.

## URL

`/redfish/v1/Systems/<ID>/EthernetInterfaces/<EthernetInstanceID>/Vlans`

## HTTP methods and response content type

**Table 216. HTTP methods and response content type for VLanNetworkInterface**

| HTTP method | Response content type |
| --- | --- |
| GET | application/json |

## Status codes

**Table 217. Status codes for VLanNetworkInterface**

| HTTP status code |
| --- |
| 200 |
| 400 |
| 500 |

# TaskService

## Description

This resource represents a task service for a Redfish implementation.

## URL

```
/redfish/v1/TaskService
```

## HTTP methods and privileges

**Table 218. HTTP methods and privileges for TaskService**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

**Table 219. Status codes for TaskService**

| HTTP status code |
|---|
| 200 |
| 400 |
| 500 |

# Tasks

## URL

```
/redfish/v1/TaskService/Tasks/<TaskID>
```

## Status codes

**Table 220. Status codes for Tasks**

| HTTP status code | Extended information |
|---|---|
| 200 | Ok |
| 202 | Accepted |

| HTTP status code | Extended information |
|---|---|
| 404 | Not Found |

# Thermal

## Description

This resource is used to represent the thermal matrices resource for a Redfish implementation.

## URL

`/redfish/v1/Chassis/<ID>/Thermal`

## HTTP methods and privileges

Table 221. HTTP methods and privileges for Thermal

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

Table 222. Status codes for Thermal

| HTTP status code |
|---|
| 200 |
| 400 |
| 500 |

## Reference properties

## /redfish/v1/Chassis/<ID>/Sensors/Fans/<ID>

## Description

Provides details of the fan that is associated with the system or chassis.

## HTTP methods and privileges

Table 223. HTTP methods and privileges for Fans

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

Table 224. Status codes for Fans

| HTTP status code |
|---|
| 200 |
| 400 |
| 500 |

ⓘ NOTE: On PowerEdge FX2 systems, iDRAC can display additional instrumentation data from the sensors on the server only if the Chassis Monitoring setting is set to enabled on iDRAC and CMC.

# Thermal — Temperatures sensors

## URL

```
/redfish/v1/Chassis/<ID>/Sensors/Temperatures/<ID>
```

## Description

Represents the properties for temperature sensors.

## HTTP methods and privileges

Table 225. HTTP methods and privileges for Temperatures Sensors

| HTTP method | Required privilege |
|---|---|
| GET | Login |

## Status codes

Table 226. Status codes for Temperatures Sensors

| HTTP status code |
|---|
| 200 |
| 400 |
| 500 |

> (i) **NOTE:** On PowerEdge FX2 systems, iDRAC can display additional instrumentation data from the sensors on the server only if the Chassis Monitoring setting is set to enabled on iDRAC and CMC.

## Thermal — Redundancy

### URL

/redfish/v1/Chassis/<ID>/Thermal/Redundancy/<ID>

### Description

Provides redundant information that is available for fans and other elements in this resource.

### HTTP methods and privileges

**Table 227. HTTP methods and privileges for Redundancy**

| HTTP method | Required privilege |
| --- | --- |
| GET | Login |

### Status codes

**Table 228. Status codes for Redundancy**

| HTTP status code | Extended information |
| --- | --- |
| 200 | |
| 400 | |
| 403 | Insufficient privileges. |
| 500 | |

# UpdateService

## Description

This represents the properties of the update service for the Redfish implementation.

## URL

```
/redfish/v1/UpdateService
```

# HTTP methods and privileges

**Table 229. HTTP methods and privileges for UpdateService**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

# Required parameters

**Table 230. Parameters for UpdateService**

| Parameter | Description |
|---|---|
| ImageURI | The URI of the software image to be installed. |

# Status codes

**Table 231. Status codes for UpdateService**

| HTTP status code | Extended information | Error Message Code |
|---|---|---|
| 200 | | OSD35, SUP024 |
| 403 | Base.1.0. InsufficientPrivilege | RAC0506 |
| 405 | Base.1.0.GeneralError | |
| 404 | Base.1.0. ResourceMissingAtURI | SYS403 |
| 500 | Base.1.0.InternalError | RAC964 |

# Supported action — SimpleUpdate

## Description

This resource is used to represent extension of the UpdateService schema of Redfish.

You can use the this action to update only one component at a time. If you attempt to update multiple components at once, error SYS442 is returned. To update multiple components, perform the updates one at a time.

If you use this action to update iDRAC, the update is applied immediately and the system reboots. For other components, the update is applied at the next reboot.

## URL

```
/redfish/v1/UpdateService/Actions/UpdateService.SimpleUpdate
```

# HTTP methods and privileges

**Table 232. HTTP methods and privileges for SimpleUpdate**

| HTTP method | Required privilege |
|---|---|
| POST | • **.d9** file type — ConfigureManager<br>• **.pm** file type — ConfigureManager<br>• **.exe** file type — ConfigureSelf |

# Status codes

| HTTP status code | Extended information | Error Message Code |
|---|---|---|
| 202 | | SYS408 |
| 400 | | SUP024, SYS406, OSD35 |
| 400 | Base.1.0. PropertyValueTypeError | |
| 400 | Base.1.0. PropertyMissing | |
| 400 | Base.1.0.MalformedJSON | SYS405 |
| 403 | Base.1.0.InsufficientPrivilege | RAC0506 |
| 403 | | LIC501 |
| 404 | Base.1.0. ResourceMissingAtURI | SYS403 |
| 415 | | SYS401 |
| 500 | Base.1.0.InternalError | RAC964 |
| 503 | | SUP0108 |

# VirtualMedia

## Description

This resource is used to represent a virtual media service for a Redfish implementation.

## URL

```
/redfish/v1/Managers/<ID>/VirtualMedia
```

# HTTP methods and privileges

**Table 234. HTTP methods and privileges for VirtualMedia**

| HTTP method | Required privilege |
|---|---|
| GET | Login |

# Status codes

**Table 235. Status codes for VirtualMedia**

| HTTP status code | Extended information |
|---|---|
| 200 | |
| 400 | |
| 403 | Insufficient privileges. |
| 500 | |

# Properties and values

**Table 236. Properties and values for VirtualMedia**

| Property | Values |
|---|---|
| MediaTypes | · CD<br>· DVD<br>· USBStick |
| ConnectedVia | · NotConnected<br>· Applet |

# Examples

ⓘ **NOTE: For more information about Redfish and detailed examples, see the white papers available at** https://www.dmtf.org/standards/redfish.

The following table provides usage examples for the HTTP supported methods such as GET, POST, PATCH, and DELETE:

Topics:

## Example for GET

| URL | /redfish/v1/Managers/iDRAC.Embedded.1/SerialInterfaces |

Output
```
{
"@odata.context": "/redfish/v1/$metadata#Managers/Members/iDRAC.Embedded.1/
SerialInterfaces/$entity",
"@odata.count": 1,
"@odata.id": "/redfish/v1/Managers/iDRAC.Embedded.1/SerialInterfaces",
"@odata.type": "#SerialInterface.1.0.0.SerialInterfaceCollection",
"Description": "Collection of Serial Interfaces for this System",
"Members": [
        {
        "@odata.id": "/redfish/v1/Managers/iDRAC.Embedded.1/SerialInterfaces/
iDRAC.Embedded.1#Serial.1"
        }
],
"Name": "Serial Interface Collection"
}
```

## Example for PATCH

| URL | /redfish/v1/Managers/iDRAC.Embedded.1/Accounts/<Account-id> |

Input
```
{"Password": "123","UserName": "reader"}
```

Output
```
{
"Success": {
    "Message": "Successfully Completed Request",
    "MessageId": "Base.1.0.Success",
    "Resolution": "None",
    "Severity": "Ok"
```

```
        }
    }
```

# Example for POST

URL      `/redfish/v1/Systems/System.Embedded.1/Actions/ComputerSystem.Reset`

Input      `{"ResetType":"GracefulRestart"}`

Output     `204: No Content`

# Example for DELETE

URL      `/redfish/v1/EventService/Subscriptions/<SubscriptionId>`

Output
```
200 Ok
{
"INFO": "<SubscriptionId> subscription deleted successfully"
}
```

# Example of Job Creation

## Request

Method   POST

URI     https://100.101.18.90/redfish/v1/Managers/iDRAC.Embedded.1/Jobs

**Headers**

Authorization: Basic cm9vdDpjYWx2aW4=

Content-Type: application/json

**Body**

```
{
  "TargetSettingsURI" : "/redfish/v1/Systems/System.Embedded.1/Bios/Settings",
  "StartTime" : "TIME_NOW",
  "EndTime" : "TIME_NA"
}
```

Or

```
{
  "TargetSettingsURI" : "/redfish/v1/Systems/System.Embedded.1/Bios/Settings",
  "StartTime" : "2017-08-21T18:11:00",
  "EndTime" : "2017-08-21T20:11:00"
}
```

# Response

HTTP Status code: 200

**Headers**

```
OData-Version: 4.0
Keep-Alive: timeout=60, max=199
Content-Type: application/json;odata.metadata=minimal;charset=utf-8
Server: Appweb/4.5.4
Location: /redfish/v1/Managers/iDRAC.Embedded.1/Jobs/JID_471269252011
