Trend leading one-step door opening

Your new home deserves a new lock

Philips 6100 series push-pull door lock is designed compact and stylish, perfect for young people. With any of the 6 unlocking solutions, you can open the door in one step. Now, forget the keys and embrace an affordable smart new life.

Extraordinary design brings outstanding experience

- IML brushed finishing: Smooth and wearable as new

Easy life doesn't stop there

- Patented full auto mortise: Unlock and open at one go
- Auto locking: Enjoy the reassurance after closing the door
- Intuitive fingerprinting: Unlock swiftly at one go

Multiple protection in one for overall home safety

- Dual verification unlocking: Security is never forgotten
- Fake PIN code: Protect your password security in real time
- Outside forced lock: Instant alarm upon inside unlocking
- Safe handle: No more safety risks, be reassured while away
- Super B grade lock cylinder: Higher reliability and security

PHILIPS

Highlights

IML brushed finishing

The IML brushed surface has the hardness higher than 2H. Besides, it's waterproof, moisture proof and can keep fingerprint residue out.

Auto locking function

Philips 6100 series push-pull smart door lock employs full automatic mortise. Without the need for any extra action, the deadbolt will spontaneously pop out after you close the door. If the door is not locked properly, the mortise will give an alarm to remind you of the door lock status.

Dual verification unlocking

In dual verification mode, you can use a combination of any two factors (fingerprint, password and card) as the unlocking solution to ensure doubled security for your home.

Fake PIN code

Philips 6100 series push-pull smart door lock comes with the feature of Fake PIN Code technology which allows you to enter random number combinations to successfully get identified as long as there is consecutive input of the real password. This feature can effectively prevent peeping and safeguard your real password.

Intuitive fingerprinting

The fingerprint sensor is integrated in the push-pull handle so that when you hold the handle, your finger will naturally fall on the sensor. You can simply reach out and intuitively touch the sensor, then push to open after a successful fingerprint verification. The one-step unlocking feature will definitely bring you a fast and convenient door opening experience.

One-key outside forced lock

Before leaving home, you can touch the outside forced lock key to enable the function.

In this mode, opening the door from inside the room will trigger an alarm. This feature can effectively warn you of security risks and upgrade the level of home security.

Patented full auto mortise

The upgraded full automatic mortise makes it possible for instant unlocking right after a successful verification. Once you are recognized, you can directly push or pull the handle to open the door, which greatly simplifies the use of your door lock and brings you a fast and convenient in and out experience.

Safe handle switch

You can enable the safe handle function before you leave home. After the door is locked, the indoor handle will be fixed to ensure that nobody could open the door by pushing the indoor handle. This feature can effectively prevent unlocking from indoor, thus eliminating security risks and improves anti-theft performance.
