Hybrid power

The Hybrid power feature enables your computer to function optimally during the following instances of heavy loading. Examples of heavy loading include:

- Graphics and processor-intensive applications and/or gaming
- External power loading from devices relying on your computer as a power source such as gaming mice, keyboards, external speakers and headsets

When during instances of heavy loading, system performance is maintained through hybrid power. Hybrid power coordinates the power drawn from the power adapter and battery, allowing power to be drawn from the battery for up to 5 percent per hour with the power adapter plugged in. This feature is disabled when the battery falls below 20 percent charge.

The following table shows the different scenarios and benefits of hybrid power:

Table 21. Hybrid power feature description

Battery capacity	Feature description
100%~20%	When the battery charge reaches 100 percent and the power adapter is plugged in, battery stops charging to avoid lithium-ion degradation. Under heavy loading, hybrid power is enabled and battery charge will deplete to maintain system performance. If your computer is no longer under heavy load, battery will resume charging.
<20%	Hybrid function is disabled. Computer will throttle during heavy loading and may encounter performance issues.

Keyboard shortcuts

 **NOTE:** Keyboard characters may differ depending on the keyboard language configuration. Keys used for shortcuts remain the same across all language configurations.

 **NOTE:** You can define the primary behavior of the function keys (F1–F12) by changing Function Key Behavior in BIOS setup program.

Alienware Command Center

Alienware Command Center (AWCC) provides a single interface to customize and enhance the gaming experience. The AWCC dashboard displays most recently played or added games, and provides game-specific information, themes, profiles, and access to computer settings. You can quickly access settings such as game-specific profiles and themes, lighting, macros, and audio that are critical to the gaming experience.

AWCC also supports AlienFX 2.0. AlienFX enables you to create, assign, and share game-specific lighting maps to enhance the gaming experience. It also enables you to create your own individual lighting effects and apply them to the computer or attached peripherals. AWCC embeds Peripheral Controls to ensure a unified experience and the ability to link these settings to your computer or game.

AWCC supports the following features:

- FX: Create and manage the AlienFX zones.
- Fusion: Includes the ability to adjust game-specific Power Management, Sound Management, and Thermal Management features.
- Peripheral Management: Enables peripherals to appear in and be managed in Alienware Command Center. Supports key peripheral settings and associates with other functions such as profiles, macros, AlienFX, and game library.

AWCC also supports Sound Management, Thermal Controls, CPU, GPU, Memory (RAM) monitoring. For more information about AWCC, see the *Alienware Command Center Online Help*.
