Performance and clock frequency will vary depending on application workload and your hardware and software configurations. Intel's numbering is not a measurement of clock speed.

² For hard drives, TB = 1 trillion bytes. Actual formatted capacity is less. Up to 35 GB of hard drive is reserved for system recovery software.

³ For solid state drives, GB = 1 billion bytes. Actual formatted capacity is less. Up to 35 GB of system disk is reserved for system recovery software. Data is split across both drives and may become inaccessible in the event of a drive failure.
