## DPU—Data Processing Unit Event Messages

### DPU9026

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The arg1 operating system is successfully working.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = DPU Friendly FQDD</li></ul>
<b>Detailed Description</b>	The DPU operating system and its services are restarted, and successfully working.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (DPU = Data Processing Unit)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

### DPU9027

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The operating system of arg1 is not ready for normal function because either the boot synchronization period has timed out or the boot synchronization timeout value is too less.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = DPU Friendly FQDD</li></ul>
<b>Detailed Description</b>	The operating system of the DPU identified in the message is not ready for normal function because either the boot synchronization period has timed out or the boot synchronization timeout value is too less.
<b>Recommended Response Action</b>	Increase the DPUOSReadyTimeout value based on your DPU configuration. If the issue persists, reinstall the DPU operating system and power on the server.
<b>Category</b>	System Health (DPU = Data Processing Unit)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## DPU9028

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	All the boot synchronization-enabled DPU operating systems are ready.
<b>Detailed Description</b>	All the boot synchronization-enabled DPU operating systems are ready.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	System Health (DPU = Data Processing Unit)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	3283
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## DPU9029

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A Graceful Shut Down operation of the host OS is initiated. The shutdown operation of the OSs of the respective Data Processing Units (DPUs) is initiated.
<b>Detailed Description</b>	A Graceful Shut Down operation of the host OS is initiated. The shutdown operation of the OSs of the respective Data Processing Units (DPUs) is initiated.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (DPU = Data Processing Unit)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	3283
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## DPU9030

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The shutdown operation of the OS of the respective DUPs cannot be completed.
<b>Detailed Description</b>	Unable to shut down the OS of the respective Data Processing Units (DPUs) because the DPU shutdown timeout value is less.
<b>Recommended Response Action</b>	1) Run the following RACADM command at the CLI to get the DPU shutdown timeout value: racadm get system.dpuGlobalConfiguration.DPUOSShutdownTimeOut.2) Run the following RACADM command at the CLI to increase the DPU shutdown timeout value: racadm set

system.dpuGlobalConfiguration.DPUOSSShutdownTimeOut <enter new value>.3) Retry the Graceful Shutdown operation of the host device. If the issue persists, reinstall the DPU operating system.

<b>Category</b>	System Health (DPU = Data Processing Unit)

## ENC100

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	arg1 is sending inconsistent responses to the controller.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = enclosure name</li> </ul>
<b>Detailed Description</b>	The storage controller is not receiving a consistent response from the enclosure due to a firmware problem or an incorrect cabling configuration. If the cables are longer than the specified maximum length, the signals may be degraded.
<b>Recommended Response Action</b>	Turn off all the enclosures attached to the system, check if the cable configurations are correct and reboot the system. If the problem persists, update the enclosure firmware to the latest supported version. Download the latest supported version of the firmware from the service provider. For more information about cable configuration, see storage enclosure documentation.

## ENC42

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The redundant path on the arg1 is unavailable.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = enclosure name</li> </ul>
<b>Detailed Description</b>	The redundant path on the enclosure identified in the message is unavailable. Even though the storage communication path between the controller and enclosure is currently available, the communication will end if another path fails.
<b>Recommended Response Action</b>	The controller has lost communication with an enclosure. Make sure that the cables are not loose and defective. For information about checking cable status, see the Storage Hardware documentation available on the support site.
<b>Category</b>	Storage (ENC = Storage Enclosure)

## ENC44

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The redundant multipath connection to the enclosure arg1 is abruptly disconnected because either the EMM is removed, cable is damaged, the cable is removed, a SAS IO Module is powered off, is damaged or is removed.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = enclosure Name</li> </ul>
<b>Detailed Description</b>	The redundant multipath connection to the enclosure identified in the message abruptly disconnected because either the EMM is removed, cable is damaged, the cable is removed, a SAS IOM module is powered off, is damaged or is removed.
<b>Recommended Response Action</b>	Do one of the following: 1) Make sure that the cables are properly connected to the Controller. 2) If the Enclosure Management Module (EMM) is removed, reinsert the EMM. 3) Check the status of both SAS IO modules (IOM). If a SAS IO module is removed, reinsert the SAS IOM.

## ENC46

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** An error has occurred in the enclosure or backplane arg1 because of a component count mismatch, which has resulted in the degraded state of enclosure or backplane.

**Arguments**

- arg1 = FQDD

**Detailed Description** Because of an issue in communication between the enclosure and RAID controller, any or all of the following counts may mismatch: slot count, EMM count, temperature probe count, PSU count, and fan count.

**Recommended Response Action** Restart the server or perform the Power Cycle operation on the enclosure.

**Category** Storage (ENC = Storage Enclosure)

**Severity** Warning

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## ENC5

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Redundancy on arg1 is degraded

**Arguments**

- arg1 = Enclosure Name

**Detailed Description** One or more of the enclosure components has failed. For example, a fan or power supply may have failed. Although the enclosure is currently operational, the failure of additional components could cause the enclosure to fail.

**Recommended Response Action** Identify and replace the failed component. To identify the failed component, select the enclosure in the tree view and click the Health subtab. Any failed component will be identified with a red X on the enclosures Health subtab. Alternatively, you can select the Storage object and click the Health subtab. The controller status displayed on the Health subtab indicates whether a controller has a failed or degraded component. See the enclosure documentation for information on replacing enclosure components and for other diagnostic information.

**Category** Storage (ENC = Storage Enclosure)

## ENC6

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Communication timeout on arg1.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Enclosure Name</li></ul>
<b>Detailed Description</b>	The controller is unable to communicate with an enclosure. There are several reasons for communication loss. For example, there may be a bad or loose cable. An unusual amount of I/O may also interrupt communication with the enclosure. In addition, communication loss may be caused by software, hardware, or firmware problems, bad or failed power supplies, and enclosure shutdown.
<b>Recommended Response Action</b>	Check for problems with the cables. See the Cables attached correctly section for more information on checking the cables. You should also check to see if the enclosure has degraded or failed components. To do this, select the enclosure object in the tree view and click the Health subtab. The Health subtab displays the status of the enclosure components. Verify that the controller has the supported driver and firmware versions installed and that each Enclosure Management Modules (EMMs) are running the same version of supported firmware.

# EPP—Extended Power Performance Event Messages

## EPP001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature on chassis.
<b>Detailed Description</b>	The Extended Power Performance cannot be used unless chassis has six EPP capable PSUs, Configure the Power Redundancy Policy to Grid Redundancy & MPCM, DPSE, SBPM and Fresh Air features should be disabled.
<b>Recommended Response Action</b>	Make sure that chassis has six EPP capable PSUs, Configure the Power Redundancy Policy to Grid Redundancy & MPCM, DPSE, SBPM and Fresh Air features should be disabled. Then enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the Maximum Power Conservation Mode is enabled.
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the Maximum Power Conservation Mode is enabled.
<b>Recommended Response Action</b>	Disable the Maximum Power Conservation Mode and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the Dynamic Power Supply Engagement mode is enabled.
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the Dynamic Power Supply Engagement mode is enabled.
<b>Recommended Response Action</b>	Disable the Dynamic Power Supply Engagement mode and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)

<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the Server Performance Over Power Redundancy mode is enabled.
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the Server Performance Over Power Redundancy mode is enabled.
<b>Recommended Response Action</b>	Disable the Server Performance Over Power Redundancy mode and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to set the Extended Power Performance (EPP) feature because the Server Based Power Management mode is enabled.
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the Server Based Power Management mode is enabled.
<b>Recommended Response Action</b>	Disable the Server Based Power Management mode and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to set the Extended Power Performance (EPP) feature because the Fresh Air Configuration mode is enabled.
<b>Detailed Description</b>	The Extended Power Performance cannot be enabled because the Fresh Air Configuration mode is enabled.

<b>Recommended Response Action</b>	Disable the Fresh Air Configuration mode and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the Chassis Management Controller (CMC) firmware update is in progress.
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the Chassis Management Controller (CMC) firmware update is in progress.
<b>Recommended Response Action</b>	Wait for the firmware update to complete, and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the Chassis Management Controller (CMC) failover process is in progress.
<b>Detailed Description</b>	The Extended Power Performance is cannot be used because the Chassis Management Controller (CMC) failover process is in progress.
<b>Recommended Response Action</b>	Wait for the failover process to complete, and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the Grid Redundancy feature is not available.
----------------	--

<b>Detailed Description</b>	The Extended Power Performance cannot be used because the Grid Redundancy feature is not available.
<b>Recommended Response Action</b>	Resolve the Grid Redundancy feature-related issue, and then retry to enable the EPP feature. For more information on the Grid Redundancy feature see Chassis Management Controller (CMC) User Guide.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - arg1 is empty.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = slot number</li> </ul>
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message is empty.
<b>Recommended Response Action</b>	Install an EPP-capable PSU in the empty slot, and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - arg1 has no input power.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = slot number</li> </ul>
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message has no power supply.
<b>Recommended Response Action</b>	Make sure that the PSU in the PSU slot has input power, and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - arg1 has no output power.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = slot number</li></ul>
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message has no output power.
<b>Recommended Response Action</b>	Make sure that the PSU in the PSU slot has no issue in the output power, and then retry to enable the EPP feature. To check the health status of the PSU identified in the message using the RACADM CLI utility, enter the following command: "racadm getpbinfo". If the PSU identified in the message is showing no output power, contact your service provider.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the power rating of power supply unit (PSU) slot - arg1 is less than 3000W.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = slot number</li></ul>
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the power rating of PSU identified in the slot is less than 3000W.
<b>Recommended Response Action</b>	Make sure that there are at least six PSUs in the chassis and each PSU must be of 3000W capacity, and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the Redundancy Policy is not set to Grid Redundancy.
<b>Detailed Description</b>	The Extended Power Performance is cannot be used because the Redundancy Policy is not set to Grid Redundancy.
<b>Recommended Response Action</b>	Configure the Power Redundancy Policy to Grid Redundancy and retry to enable the EPP feature. To configure the Power Redundancy Policy using the RACADM CLI utility, enter the following command: "racadm config -g cfgChassisPower -o cfgChassisRedundancyPolicy 1".

<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## EPP015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the System Input Power Cap is set to less than or equal to 13300W (45381 BTU/h).
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the System Input Power Cap is set to less than or equal to 13300W (45381 BTU/h).
<b>Recommended Response Action</b>	Set the Chassis Power Cap to greater than 13300W (45381 BTU/h), and then retry to use the EPP feature. To set the Chassis Power Cap using the RACADM CLI utility, enter the following command: "racadm config -g cfgChassisPower -o cfgChassisDefaultPowerCapUpperBound 13301".
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## FAN—Fan Event Event Messages

### FAN0000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Fan arg1 RPM is less than the lower warning threshold.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	The fan is not performing optimally. The fan may be installed improperly or may be failing. Fan speeds may have increased to protect the system.
<b>Recommended Response Action</b>	Remove and re-install the fan at the next scheduled service window. If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (FAN = Fan Event)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2154
<b>LCD Message</b>	Fan <number> RPM is outside of range. Check fan.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## FAN0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Fan arg1 RPM is less than the lower critical threshold.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li></ul>
<b>Detailed Description</b>	The fan is not performing optimally. The fan may be installed improperly or may be failing. Fan speeds may have increased to protect the system.
<b>Recommended Response Action</b>	To resolve any temporary issues in communicating with the fans, restart iDRAC. If the issue persists, do the following: 1) Open the chassis cover and check for any cable interference in the fan blades. 2) Remove the fan (as identified in the iDRAC log) from the server, and then reinstall in the same slot. 3) Make sure the fan is removed from its connector on the motherboard. 4) Swap the fan with another fan from a different location in the same server. 5) If the issue persists, replace the fan with a new fan. 6) If the issue persists after installing the new fan in the slot, contact your technical support team and provide complete information about the tasks you performed to resolve this issue. Note: Dell Technologies recommends that you always upgrade your iDRAC and BIOS to the latest versions to get optimized performance on your servers.

<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## FAN0101

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the firmware version of the arg1 fan arg2 because of error code = arg3.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = location</li><li>• arg2 = index</li><li>• arg3 = error</li></ul>

<b>Detailed Description</b>	The firmware version of the fan identified in the message cannot be updated because of internal issues.
<b>Recommended Response Action</b>	Manually remove and reinstall the fan during the next scheduled service window.If the issue, persists, contact your service provider.
<b>Category</b>	Updates (FAN = Fan Event)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## FAN0200

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	arg1 fan arg2 configuration mismatch.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = location</li> <li>• arg2 = index</li> </ul>
<b>Detailed Description</b>	The configuration of the fan identified in the message is not matching with the other fans in the chassis. Some devices may experience varied performance and possible thermal errors depending on the configuration and workload.
<b>Recommended Response Action</b>	Replace the fan with one that matches the configuration and type of fan inside MX7000 at the next scheduled service. Dell recommends as soon as possible for optimal performance. For more information about recommended fan configurations, see the MX7000 Users Guide available on the support site.

## FAN8503

**NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The Chassis was turned off because more than two internal fans stopped functioning.

**Detailed Description** The Chassis was turned off because more than two Chassis internal fans stopped functioning. The fans with issues are identified in the CMC Hardware (System Event Log) and Chassis Logs.

**Recommended Response Action** Make sure that the Chassis internal fans are functioning. At the command line interface (CLI), enter the following command to identify fans that are not functioning: "racadm getsel". Using the CMC Web GUI, select the chassis, click the Logs tab, and then select Hardware Log. Reinsert or replace fans that are not functioning correctly.

## FC010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create Configuration job because Lifecycle Controller is not enabled.
<b>Detailed Description</b>	For 11G systems: System Services must be enabled to perform the requested operation. System Services has been disabled through the iDRAC configuration utility accessed by pressing CTRL+E on boot up or through a remote operation. For 12G and above generations: Lifecycle Controller must be enabled to perform the requested operation. Lifecycle Controller has been disabled by pressing F2 Setup, selecting iDRAC Configuration, and selecting Lifecycle Controller Settings on boot up or through a remote operation.
<b>Recommended Response Action</b>	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.

## FCD—Feature Card Event Messages

### FCD8500

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to apply the arg1 configuration. The affected servers (slot arg2) are not turned off.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = configuration name</li> <li>arg2 = slot number</li> </ul>
<b>Detailed Description</b>	The server specified in the message must be turned off or the server slot must be empty before changing the FlexAddress configuration.
<b>Recommended Response Action</b>	Turn off the server and retry the operation.
<b>Category</b>	Audit (FCD = Feature Card)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

### FCD8501

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The feature is deactivated: arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = feature name</li> </ul>
<b>Detailed Description</b>	The FlexAddress, FlexAddress+ or extended storage feature is deactivated. Turn chassis off and remove the feature card.
<b>Recommended Response Action</b>	Turn chassis OFF and remove card. Alternately, to repair the card, perform Repair by navigating to the CMC GUI -> Chassis Controller -> Flash Media page.
<b>Category</b>	Audit (FCD = Feature Card)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

**Applicable Event or Alert Types** CMC—Not Applicable

## FCD8503

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The feature is activated in the chassis: arg1

**Arguments**

- arg1 = feature name

**Detailed Description** Chassis already has the feature identified in the message activated. Only one instance of a feature can be activated at a time. If the feature must be activated on the new card, it must be deactivated before activating.

**Recommended Response Action** No response action is required.

**Category** Audit (FCD = Feature Card)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## FCD8504

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The feature was previously activated on another chassis.

**Detailed Description** The card was installed and activated on another chassis. To use this card, it must be deactivated (uninstalled) on the other chassis.

**Recommended Response Action** Remove the card and install it on the chassis where the feature is activated.

**Category** Audit (FCD = Feature Card)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## FCD8505

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The features cannot be deactivated when the chassis is turned on.

**Detailed Description** Features cannot be deactivated when the chassis is turned on.

<b>Recommended Response Action</b>	Turn off the chassis via the Web interface or RACADM command line interface before deactivating the feature. To turn off the chassis using Racadm type "racadm chassisaction -m chassis powerdown". To deactivate the feature using RACADM, type "racadm <feature> -d" where <feature> is the name of the feature to be deactivated.
<b>Category</b>	Audit (FCD = Feature Card)

## FCD8531

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to activate the arg1. The chassis service tag is unavailable.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = feature name</li> </ul>
<b>Detailed Description</b>	The CMC is not responding. The chassis has the factory-programmed service tag.
<b>Recommended Response Action</b>	Contact your service provider.
<b>Category</b>	Audit (FCD = Feature Card)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## FCD8532

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to activate the FlexAddress feature because the SD card in which the FlexAddress is stored is corrupted.
<b>Detailed Description</b>	The FlexAddress feature cannot be activated because the SD card in which the FlexAddress (pwwn_mac.xml) or FlexAddressPlus file (pwwn_mac_ext.xml) is stored is corrupted with invalid data.
<b>Recommended Response Action</b>	Contact your service provider or repair the SD card. For more information about repairing the SD card, see the Troubleshooting section in the Chassis Management Controller Owners Manual available on the support site.

# FLDC—Fluid Cache Event Messages

## FLDC1001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The journal mirror at path = arg1 is available.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = World Wide Name</li></ul>
<b>Detailed Description</b>	The entry in the journal for the device identified in the message with the WWN (World Wide Name) is available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Storage (FLDC = Fluid Cache)
<b>Severity</b>	Informational
<b>OMSA Event ID</b>	2700
<b>OMSA Trap ID</b>	160100
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## FLDC1002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The following journal mirror is being replaced: File Path Name = arg1.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = file path</li></ul>
<b>Detailed Description</b>	The journal mirror at the reported file path is being replaced. This event is a notification that the journal mirror replacement is now complete.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Storage (FLDC = Fluid Cache)

## FLDC1010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Caching is enabled on the arg1 with wwn = arg2 and path = arg3.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = virtual disk name</li><li>• arg2 = World Wide Name</li><li>• arg3 = device pathname</li></ul>
<b>Detailed Description</b>	Caching is enabled on the virtual disk identified in the message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Storage (FLDC = Fluid Cache)
<b>Severity</b>	Informational
<b>OMSA Event ID</b>	2907
<b>OMSA Trap ID</b>	120100;150100
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## FLDC1012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Caching is disabled for the arg1 with WWN = arg2 and path = arg3.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = virtual disk name</li><li>• arg2 = World Wide Name</li></ul>

- arg3 = device pathname

<b>Detailed Description</b>	The operation to disable caching is successful. Caching is disabled for the virtual disk identified in the message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Storage (FLDC = Fluid Cache)
<b>Severity</b>	Informational
<b>OMSA Event ID</b>	2910
<b>OMSA Trap ID</b>	120100;150100;160100
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## FLDC1013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The cached LUN with WWN = arg1 and path = arg2 for arg3 has had a failure.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = World Wide Name</li> <li>• arg2 = device pathname</li> <li>• arg3 = virtual disk name</li> </ul>
<b>Detailed Description</b>	The cached LUN identified in the message has had a failure to successfully perform a read or write operation. The user application should now be seeing I/O failures when trying to read or write to the Fluid Cache device at the path identified in the message.
<b>Recommended Response Action</b>	Contact your service provider to diagnose the cause and assist in recovery process.
<b>Category</b>	Storage (FLDC = Fluid Cache)
<b>Severity</b>	Critical

## FLDC1021

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The journal mirror entry with WWN = arg1 is not accessible.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = World Wide Name</li> </ul>
<b>Detailed Description</b>	The device identified in the message having the journal mirror entry with given WWN (World Wide Name) is not accessible. A portion of an SSD is used for journal content. To assure consistency, the journal content is written into two other SSDs. These copies are journal mirrors. If the journal content cannot be written to any of the journal mirrors, then this event is signaled. It is a warning because the FLDC code will then attempt to choose another SSD to be a journal mirror.
<b>Recommended Response Action</b>	No response action is required.

## FSD—Debug Event Messages

### FSD000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The debug operation for arg1 is authorized by the following BMC user: BMC user name: arg2 at arg3, for the period started at arg4 and ended at arg5.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = debugCaps</li> <li>• arg2 = userName</li> <li>• arg3 = unblockTime</li> <li>• arg4 = startTime</li> <li>• arg5 = endTime</li> </ul>
<b>Detailed Description</b>	The debug operation is authorized for the user identified in the message. The customer has authorized the specified debug capabilities on this BMC. This should occur in response to a request from the Dell Tech Support team. Each debug capability represents a certain action that Dell engineers can perform to debug BMC.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (FSD = Debug)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	8595
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

### FSD001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The debug operation for arg1 is authorized by Dell: Employee arg2 at arg3, for the period started at arg4 and ended at arg5.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = debugCaps</li> <li>• arg2 = employeeName</li> <li>• arg3 = grantTime</li> <li>• arg4 = startTime</li> <li>• arg5 = endTime</li> </ul>
<b>Detailed Description</b>	The debug operation is authorized Dell. Dell has authorized the specified debug capabilities on this BMC. Each debug capability represents a certain action that Dell engineers can perform to debug BMC.

<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (FSD = Debug)
<b>Severity</b>	Informational

<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## FSD002

**NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Debug authorization failed; for debugCaps: arg1, authorized by iDRAC user: arg2, and Dell employee: arg3, at arg4 for the period: arg5 to arg6.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = DebugCaps</li> <li>• arg2 = iDRAC user</li> <li>• arg3 = Dell employee</li> <li>• arg4 = unblock time</li> <li>• arg5 = start time</li> <li>• arg6 = end time</li> </ul>
<b>Detailed Description</b>	A RACADM Debug command failed. If the RACADM Debug command was executed under the direction of Dell tech support then further assistance from tech support should be requested. Otherwise this command is not intended for customer use.
<b>Recommended Response Action</b>	Verify all of the following 1) ensure that the unblock, grant, and invoke/start/stop/resume commands are all executed against the same iDRAC. 2) ensure dat.ini file has not been changed in any way. 3) ensure that current date falls between the start and end times. Note that Dell can further restrict both the set of debugCaps that is authorized and the start and stop times. If an authorized person did not enter a RACADM debug command then an attacker may have entered the command.

## FSD005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The debug operation for arg1 requested by arg2 at arg3, for the period started at arg4 and ended at arg5 is expiring in arg6 days.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = debugCaps</li> <li>• arg2 = userName</li> <li>• arg3 = unblockTime</li> <li>• arg4 = startTime</li> <li>• arg5 = endTime</li> <li>• arg6 = ndays</li> </ul>
<b>Detailed Description</b>	The authorized debug operation is expiring in 3 days. If IPS engineer or even user does not take action to get a new signed certificate, the existing one will be revoked soon. User may lose certain access to the system depending on the granted debug capabilities included in the signed FSD certificate.
<b>Recommended Response Action</b>	Request for a new Field Service Debug certificate with the required debug capabilities.
<b>Category</b>	Audit (FSD = Debug)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	8594
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log

**Applicable Event or Alert Types** CMC—Not Applicable

## FSD006

**NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The debug operation for arg1 requested by arg2 at arg3, for the period started at arg4 and ended at arg5 has expired.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = debugCaps</li><li>• arg2 = userName</li><li>• arg3 = unblockTime</li><li>• arg4 = startTime</li><li>• arg5 = endTime</li></ul>
<b>Detailed Description</b>	When a granted FSD certificate is installed on iDRAC/OSM, it is good for 30 days. Its existence and validity need to be checked daily by a system service, and warn the system user that the certificate will be or has been expired so the user may take needed action accordingly.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (FSD = Debug)

## HTR0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The health of Heater Manager is in Warning state.
<b>Detailed Description</b>	The health of Heater Manager is in Warning state.
<b>Recommended Response Action</b>	Immediately replace the Heater Manager Module with a good module.
<b>Category</b>	Configuration (HTR = Heater Manager)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## HTR0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The health of Heater Manager is in Critical state.
<b>Detailed Description</b>	The health of Heater Manager is in Critical state.
<b>Recommended Response Action</b>	Immediately replace the Heater Manager Module with a good module.
<b>Category</b>	Configuration (HTR = Heater Manager)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## HTR0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Heater Manager that has the following unique identification number is detected: arg1.

**Arguments**

- arg1 = VALUE

**Detailed Description** Heater Manager that has a unique identification number is detected.

**Recommended Response Action** No response action is required.

**Category** Configuration (HTR = Heater Manager)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## HTR0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The number of arg1logs is more than the threshold value of arg2.

**Arguments**

- arg1 = Warning/Error
- arg2 = maxLogValue

**Detailed Description** The health status of heater Manager is critical. The number of logs of the identified log type is more than the threshold value.

**Recommended Response Action** Immediately replace the Heater Manager Module with a good module.

**Category** Configuration (HTR = Heater Manager)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## HTR0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The health of Heater Manager is in the Critical state.

<b>Detailed Description</b>	The health of Heater Manager is in the Critical state. The health of a Heater Manager changes to the Critical state when any of the heaters health changes to Critical or the heating subsystems infrastructure changes to Critical.
<b>Recommended Response Action</b>	Review the corresponding additional message(s) for the cause of the Critical state and its recommended response action.
<b>Category</b>	Configuration (HTR = Heater Manager)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	11465
<b>LCD Message</b>	The health of Heater Manager is in the Critical state.
<b>Redfish Event Type</b>	Alert

## HTR0030

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A hardware issue has occurred in the Heater Manager Subsystem. The required sensor arg1 for the arg2 zone is not present.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = sensorNum</li><li>• arg2 = zoneName</li></ul>
<b>Detailed Description</b>	A hardware issue has occurred in the Heater Manager Subsystem. A sensor for the identified zone in the message is not present.

<b>Recommended Response Action</b>	Power off the server and ensure that the sensor cable is properly connected to the zone identified in the message. If the issue persists then provide this iDRAC Lifecycle log to the Technical Support team.
<b>Category</b>	System Health (HTR = Heater Manager)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## HTR0040

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A hardware issue has occurred in the Heater Manager Subsystem. The arg1 zone has reported a high-temperature error.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = ZoneName</li> </ul>
<b>Detailed Description</b>	A hardware issue has occurred in the Heater Manager Subsystem. The identified zone in the message has reported a high-temperature error.
<b>Recommended Response Action</b>	Power off the server and ensure that the heater cable assembly for the identified zone is properly attached and not loose or hanging. If the heater cable assembly is attached properly then provide this iDRAC Lifecycle log to the Technical Support team. Do not use the server in temperatures less than zero degrees Celsius.
<b>Category</b>	System Health (HTR = Heater Manager)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

**Arguments**

- arg1 = slot Name

**Detailed Description** The health of IO module in the slot identified in the message is in Warning state.

**Recommended Response Action** 1) Enter OpenManage Enterprise - Modular in the Chassis Subsystem section, click the View Details link corresponding to the IOM slot name in the SUBSYSTEM column. 2) In the dialog box, read

through the message(s) and act accordingly. For more information, see the Dell OpenManage Enterprise Users Guide available on the support site.

<b>Category</b>	System Health (HWC = Hardware Config)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## HWC7526

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The health of IO module in the slot arg1 is in Critical state.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = slot Name</li></ul>
<b>Detailed Description</b>	The health of IO module in the slot identified in the message is in Critical state.
<b>Recommended Response Action</b>	1) On the OpenManage Enterprise Modular Graphics User Interface (GUI), in the Chassis Subsystem section, click the View Details link corresponding to the IOM slot name in the SUBSYSTEM column. 2) In the dialog box, read through the message(s) and act accordingly. For more information, see the Dell OpenManage Enterprise Users Guide available on the support site.

**Applicable Event or Alert Types** No alerts are applicable for this message

## HWC7537

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** System warning event has occurred in the IO Module in slot arg1. The following fault message was logged by the IOM: arg2.

**Arguments**

- arg1 = slot name
- arg2 = fault message

**Detailed Description** System warning event has occurred in the IO Module identified in the message.

**Recommended Response Action** See detailed description for recommended action.

**Category** System Health (HWC = Hardware Config)

**Severity** Warning

**Redfish Event Type** Alert

**Applicable Event or Alert Types** No alerts are applicable for this message

## HWC8000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unknown device plug event occurred at this location: arg1. Additional Details: arg2.

**Arguments**

- arg1 = device location
- arg2 = details

**Detailed Description** An unknown device plug event occurred at the identified device location. Along with the device location, additional event details are provided if available.

**Recommended Response Action** No response action is required.

**Category** Audit (HWC = Hardware Config)

**Severity** Informational

**OMSA Event ID** 5650

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## HWC8001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** A device was added to the system at this location: arg1. Additional Details: arg2.

**Arguments**

- arg1 = device location
- arg2 = details

<b>Detailed Description</b>	A device was added to the system at the location identified in the message. Along with the device location, additional event details are provided if available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (HWC = Hardware Config)

## HWC9051

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The health of Graphics Processing Unit (GPU) device arg1 is degraded because of single or double bit errors on the memory cells.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = GPU FQDD</li> </ul>
<b>Detailed Description</b>	The health of Graphics Processing Unit (GPU) device identified in the message is degraded. There are a few memory pages retired on the device because of a Double Bit Error (DBE) or two consecutive Single Bit Errors (SBEs) on the memory cell. The memory pages are retired to avoid any runtime corruption of data.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (HWC = Hardware Config)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## HWC9052

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The health of Graphics Processing Unit (GPU) device arg1 is critical because of single or double bit errors on the memory cells.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = GPU FQDD</li> </ul>
<b>Detailed Description</b>	The health of Graphics Processing Unit (GPU) device identified in the message is degraded. There are a few memory pages retired on the device because of a Double Bit Error (DBE) or two consecutive Single Bit Errors (SBEs) on the memory cell. The memory pages are retired to avoid any runtime corruption of data.
<b>Recommended Response Action</b>	Contact your service provider to repair or replace the GPU device.
<b>Category</b>	System Health (HWC = Hardware Config)

## IOV—IO Virtualization Event Messages

### IOV000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Successfully completed the operation.
----------------	---------------------------------------

<b>Detailed Description</b>	This operation was successful.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (IOV = IO Virtualization)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility

## IOV001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The operation contains an invalid request or argument.
<b>Detailed Description</b>	The operation or operation parameter sent to the Chassis Manager is invalid or not supported.
<b>Recommended Response Action</b>	Contact technical support. Refer to Chassis Manager product documentation to determine the contact method for the service provider.
<b>Category</b>	Configuration (IOV = IO Virtualization)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility

## IOV002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or allocate the required resources.
<b>Detailed Description</b>	CMC could not successfully allocate resources because of the following reasons: 1) The chassis manager is unable to allocate required resources. 2) The chassis manager or chassis infrastructure firmware is rolled back to an earlier version. 3) There is an issue with the internal communications between chassis components.
<b>Recommended Response Action</b>	Make sure the firmware for the various chassis components are compatible with each other. If this is the case, do the following: 1) Turn off the chassis, by pressing the chassis Power Button, 2) run the following CMC RACADM command "racadm racresetcfg". If the problem persists, contact your technical service provider.
<b>Category</b>	Configuration (IOV = IO Virtualization)

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to turn on PCIe adapter.
<b>Detailed Description</b>	The chassis manager is unable to turn on the PCIe device because of one of the following reasons: 1) PCIe device is not supported, 2) The device is not properly inserted in the slot, 3) The device is not functioning properly, or 4) The device power requirements exceed the power available for the slot.
<b>Recommended Response Action</b>	Make sure a supported PCIe device is used and that it is properly inserted in the PCIe slot. For a list of supported devices, contact the service provider.

## IPA0100

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The iDRAC IP Address changed from arg1 to arg2.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = old IP Address</li><li>• arg2 = new IP Address</li></ul>
<b>Detailed Description</b>	The iDRAC IP Address changed from the earlier IP Address identified in the message to the new IP Address identified in the message. This notification will be generated when the iDRAC network card selection is changed, if the DHCP lease expires and the DHCP server assigns another address, or if iDRAC IP address is manually changed.
<b>Recommended Response Action</b>	Remote management consoles that have cached or stored the iDRAC IP address may have to be updated with the new IP address either through a re-discovery or manual reconfiguration. A response action may not be required if the console receives this SNMP notification and updates the iDRAC IP address accordingly.

## ISM—iDRAC Service Module Event Messages

### ISM0000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The iDRAC Service Module is started on the operating system (OS) of server.
<b>Detailed Description</b>	The iDRAC Service Module is started on the OS of server.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

### ISM0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The iDRAC Service Module detected a OS to iDRAC Pass-through in the arg1 mode. Switch the OS to iDRAC Pass-through to a USB NIC mode.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = mode</li> </ul>
<b>Detailed Description</b>	The iDRAC Service Module detected a OS to iDRAC Pass-through mode as identified in the message. iDRAC Service Module will automatically connect to iDRAC after the OS to iDRAC Pass-through is configured to the USB NIC mode.
<b>Recommended Response Action</b>	Configure OS to iDRAC Pass-through to the USB NIC mode by running the commands: 1) racadm set idrac.os-bmc.PTMode usb-p2p 2) racadm set idrac.os-bmc.UsbNicIpAddress <ip address> 3) racadm set idrac.os-bmc.adminstate enabled.

## ISM0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The iDRAC Service Module has successfully restarted communication with iDRAC.
<b>Detailed Description</b>	The iDRAC Service Module has successfully restarted communication with iDRAC.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## ISM0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The iDRAC Service Module is unable to communicate with iDRAC using the OS to iDRAC Pass-through channel.
<b>Detailed Description</b>	The iDRAC Service Module could not successfully communicate with iDRAC, because the OS to iDRAC Pass-through channel is not configured in the USB-NIC mode.
<b>Recommended Response Action</b>	Make sure that the OS to iDRAC Pass-through channel is configured only in the USB-NIC mode, and then retry the operation. To enable the OS-to-iDRAC Pass-through channel, run the following command in the order they are listed: 1) racadm set idrac.os-bmc.PTMode usb-p2p 2) racadm set idrac.os-bmc.UsbNicIpAddress <ip address> 3) racadm set idrac.os-bmc.adminstate enabled.

## ISM0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The features of iDRAC Service Module that were disabled will be enabled on this server, because OpenManage Server Administrator is not running on the operating system (OS) of this server.

**Detailed Description** iDRAC Service Module detected that OpenManage Server Administrator is not running on the OS of this server. Therefore, one or more features of iDRAC Service Module that were earlier disabled are now enabled on this server.

**Recommended Response Action** No response action is required.

**Category** Audit (ISM = iDRAC Service Module)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## ISM0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The iDRAC Service Module received a request from the arg1 to stop the services of Service Module.

**Arguments**

- arg1 = requesting source name

**Detailed Description** The iDRAC Service Module received a request from a source identified in the message to stop the Service Module services. For example, a requesting source can be an OS or iDRAC.

**Recommended Response Action** If the requesting source is iDRAC, enable the iDRAC Service Module on the iDRAC before starting this service on the server OS. To enable the Service Module by using iDRAC GUI: Click Network, click OS to iDRAC Pass-through, and then click the USB NIC option. In the OS IP Address box , type an IP address, and then click Apply. To enable the module by using RACADM command, run the following command at the command line interface: racadm set idrac.servicemodule.ServiceModuleEnable enabled.

**Category** Audit (ISM = iDRAC Service Module)

## JCP014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Maximum jobs per queue exceeded.
<b>Detailed Description</b>	The number of jobs specified in the SetupJobQueue request combined with the existing job count contains more jobs IDs than the maximum number of jobs supported by the system (256). Completed jobs are automatically deleted if they are older than the delete on completion timeout setting.
<b>Recommended Response Action</b>	Reduce the number of jobs specified in the operation or reduce the existing job count before retrying the operation. Perform one of the following to reduce the job count: 1) Delete one or more jobs and retry the operation. 2) Wait until existing jobs have an elapsed time since completion that is greater than the delete on completion timeout setting and are automatically deleted. 3) Change the delete on completion timeout setting to a smaller value so that completed jobs are automatically deleted sooner.
<b>Category</b>	Configuration (JCP = Job Control)

## JCP030

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to schedule jobs while an iDRAC firmware update or configuration job is running.
<b>Detailed Description</b>	Unable to schedule jobs for execution while an iDRAC firmware update job is running.
<b>Recommended Response Action</b>	Wait for the running job to complete, and then retry the operation.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## JCP031

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to delete the job because the configuration is still being committed.
<b>Detailed Description</b>	The job ID specified as input to the operation has configuration data that is currently being processed by the iDRAC. The job can be deleted after the processing is done.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, reset the iDRAC by pressing the System ID button for 15 seconds, wait for the iDRAC to finish restarting, and then retry the operation.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

## JCP032

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create a job because conflicting options are entered.
<b>Detailed Description</b>	The configuration job cannot be created because the -r and --realtime options cannot be used at the same time.
<b>Recommended Response Action</b>	Make sure that only one of either -r or --realtime option is entered. For example, to run a job immediately, enter the --realtime option. To schedule a job that will be run after restarting a server, use the -r option. For more information about options, see the RACADM Command Line Reference Guide available at the support site.

# LC—Lifecycle Controller Event Messages

## LC001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Command successful.
<b>Detailed Description</b>	The command completed successfully.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	General failure.
<b>Detailed Description</b>	A general failure occurred while executing the command.
<b>Recommended Response Action</b>	Verify network connectivity. If failure persists, reset the iDRAC to resolve the issue.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Failed to change the firmware update mode.
<b>Detailed Description</b>	An error occurred while trying to set the firmware update mode.
<b>Recommended Response Action</b>	Verify that the firmware version supports this mode. Also confirm that the command and parameters are correct. The parameter choices are: 1) Disable (default) 2) Allow version upgrade only 3) Match firmware of replaced part.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Provisioning Server information is not formatted correctly.
<b>Detailed Description</b>	The Provisioning Server parameter information is not formatted correctly.
<b>Recommended Response Action</b>	Verify the string format. Enter a valid IP address or hostname for the Provisioning Server such as: 1) hostname 2) hostname.domain.com 3) 1.1.1.1 4) hostname:8080 5) hostname.dell.com:8080 6) hostname1:80,hostname2:8080.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid firmware update mode.
<b>Detailed Description</b>	The value provided for the update mode parameter is invalid.
<b>Recommended Response Action</b>	Verify that the correct firmware update mode was entered. The choices are: 1) Disable (default) 2)Allow version upgrade only 3) Match firmware of replaced part.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid Auto-Discovery action.
<b>Detailed Description</b>	The Auto-Discovery action selected is invalid.
<b>Recommended Response Action</b>	Verify that the selected Auto-Discovery action is supported. The supported commands are documented in the Lifecycle Controller User Guide.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid Parameter.
<b>Detailed Description</b>	One of the parameters specified in the method is invalid.
<b>Recommended Response Action</b>	Verify that the parameters specified are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unsupported method parameter value.
<b>Detailed Description</b>	The parameter value is not supported.
<b>Recommended Response Action</b>	Confirm that the parameters provided are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Insufficient method parameters.
<b>Detailed Description</b>	There were insufficient parameters specified for this command.
<b>Recommended Response Action</b>	Confirm that the parameters provided are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.

<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Certificate imported successfully.
<b>Detailed Description</b>	The communications encryption certificate was imported successfully.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC0100

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Lifecycle Controller has entered Recovery mode.
<b>Detailed Description</b>	A persistent error has occurred while carrying out a Lifecycle Controller operation. This situation causes Lifecycle Controller to enter Recovery mode. Any remote jobs pending execution were cancelled.
<b>Recommended Response Action</b>	To verify or change Recovery mode, use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings. Updating Lifecycle Controller clears the Recovery mode.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC0101

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Lifecycle Controller action was cancelled by a user.
<b>Detailed Description</b>	A user cancelled Lifecycle Controller actions. Any remote jobs pending execution were cancelled.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Certificate import operation failed.
<b>Detailed Description</b>	There was a general failure in the certificate import process.
<b>Recommended Response Action</b>	Do the following and retry the operation: 1) Redfish: Rerun the command or reset the iDRAC by invoking the iDRACReset method which is defined in the DelliDRACCardService class. 2) iDRAC GUI: Restart the iDRAC.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LC012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Another process is using Lifecycle Controller.
<b>Detailed Description</b>	Lifecycle Controller is in use by another process. Wait for other process to complete before attempting to run another command.
<b>Recommended Response Action</b>	Try one of the following: 1) Rerun the command after about 2 minutes. 2) Make sure that Lifecycle Controller Unified Server Configurator or an Update Package is not currently running on the server 3) Reset iDRAC and rerun the command.

# LCPF—Liquid Cooling System Default Action power off Event Messages

## LCPF001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A leak is detected on arg1 arg2.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = DeviceType</li><li>• arg2 = DeviceInstance</li></ul>
<b>Detailed Description</b>	A leak has been detected on the system. There is an issue with the liquid cooling system.
<b>Recommended Response Action</b>	Remove system input power and disconnect server liquid hoses from the rack manifold.
<b>Category</b>	System Health (LCPF = Liquid Cooling System Default Action power off)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	3737
<b>LCD Message</b>	A leak is detected on <DeviceType> <DeviceInstance>.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log, Power Off, Graceful Power OFF
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LCPF002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A small leak is detected on the arg1 arg2.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = DeviceType</li><li>• arg2 = DeviceInstance</li></ul>
<b>Detailed Description</b>	A small leak is detected on the device identified in the message.
<b>Recommended Response Action</b>	1) Disconnect the input power to the server. 2) Disconnect the server liquid hoses from the rack manifold. 3) Immediately contact your service provider.
<b>Category</b>	System Health (LCPF = Liquid Cooling System Default Action power off)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	3738
<b>LCD Message</b>	A small leak is detected on the <DeviceType> <DeviceInstance>.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log, Power Off, Graceful Power OFF

## LCS—Liquid Cooling System Event Messages

### LCS0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A small leak is detected on the arg1 arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = DeviceType</li> <li>arg2 = DeviceInstance</li> </ul>
<b>Detailed Description</b>	A small leak is detected on the device identified in the message.
<b>Recommended Response Action</b>	1) Disconnect the input power to the server. 2) Disconnect the server liquid hoses from the rack manifold. 3) Immediately contact your service provider.
<b>Category</b>	System Health (LCS = Liquid Cooling System)

<b>Severity</b>	Warning
<b>Trap/EventID</b>	3050
<b>LCD Message</b>	A small leak is detected on the <DeviceType> <DeviceInstance>.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LCS0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A small leak that was earlier detected on the device is now resolved.
<b>Detailed Description</b>	A small leak that was earlier detected on the device is now resolved.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (LCS = Liquid Cooling System)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	3051
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LCS0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A large leak is detected on the arg1 arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = DeviceType</li> <li>• arg2 = DeviceInstance</li> </ul>
<b>Detailed Description</b>	A large leak is detected on the device identified in the message.
<b>Recommended Response Action</b>	1) Disconnect the input power to the server. 2) Disconnect the server liquid hoses from the rack manifold. 3) Immediately contact your service provider.
<b>Category</b>	System Health (LCS = Liquid Cooling System)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	3049
<b>LCD Message</b>	A large leak is detected on the <DeviceType> <DeviceInstance>.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LCS0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	An error is detected in the leak detection sensor of the arg1.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = DeviceType</li></ul>
<b>Detailed Description</b>	An error is detected in the leak detection sensor of the device identified in the message. There is no functional leak detection.
<b>Recommended Response Action</b>	Contact your service provider.
<b>Category</b>	System Health (LCS = Liquid Cooling System)
<b>Severity</b>	Warning
<b>LCD Message</b>	Leak Sensor error detected on <DeviceType>.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*, LCD
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LCS0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	An error that occurred in the leak detection sensor is now resolved.
<b>Detailed Description</b>	An error that occurred in the leak detection sensor is now resolved.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (LCS = Liquid Cooling System)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*, LCD

# LIC—Licensing Event Messages

## LIC000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The License Manager action succeeded.
<b>Detailed Description</b>	This command was successful.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LIC001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The License Manager command parameter used is invalid.
<b>Detailed Description</b>	The command or command parameters passed to License Manager is invalid. This is an internal error indicative of memory corruption. Under normal circumstances this error should not occur.
<b>Recommended Response Action</b>	Contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LIC002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	License Manager is unable to allocate the required resources at startup.
<b>Detailed Description</b>	The error may occur when License Manager: 1) Is unable to allocate system resources.2) Determines one or more files is incompatible with the current firmware version. This occurs when an older firmware version has been uploaded to a system that was previously running a newer firmware version. If this occurs, the current internal License Manager files are deleted and new ones are created, which align with the firmware version. A license reimport may be required. NOTE: All import, delete, export, view license commands are blocked until this issue is resolved.

<b>Recommended Response Action</b>	If the firmware has been rolled back to a previous version, this error may occur. All previously installed licenses must be re-imported. If this is not the case, contact technical support.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LIC003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	License Manager was unable to create and/or allocate the required resources.
<b>Detailed Description</b>	System resources may be unavailable at the time command is issued.
<b>Recommended Response Action</b>	Re-issue the command. If the issue persists, contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LIC004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	An internal system error has occurred.
<b>Detailed Description</b>	This error condition is reported when one of the following conditions occur: 1) Operating system detected a file error (for example, bad CRC, bad sector) when reading/writing a license manager file. The error could indicate bad or corrupt FLASH device. 2) License Manager detected an internal memory data corruption. 3) The command or command parameters passed to License Manager is invalid. This is an internal error showing memory corruption. Under normal circumstances this error should not occur. 4) When exporting a license file, License Manager was unable to allocate the temporary space required for the transfer of the file.
<b>Recommended Response Action</b>	Contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.
<b>Category</b>	Audit (LIC = Licensing)

## LIC007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid entry: Object does not exist or cannot be found.
<b>Detailed Description</b>	Each License Manager object has a unique identifier by which it may be accessed. If the user supplied identifier is outside the acceptable range or the object no longer exists in the system, then this error is returned. Most common identifiers are the license entitlement identifier, the device Fully Qualified Device Descriptor, or the import transaction identifier assigned to a license when imported.
<b>Recommended Response Action</b>	Re-issue this command with correct License Manager object identifier.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Warning

## LIC008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The license binding ID does not match the device unique identifier.
<b>Detailed Description</b>	All bound perpetual licenses contain the unique identifier of a specific device. The unique identifier binds a license to the device. For example, iDRACs unique identifier is the service tag.
<b>Recommended Response Action</b>	Obtain a new license file with the correct unique identifier for the device. To use this license, import to the device with the correct unique identifier.
<b>Category</b>	Audit (LIC = Licensing)

## LIC011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A non-evaluation license cannot be replaced with an evaluation license.
<b>Detailed Description</b>	License Manager does not allow the replacement of a non-evaluation license with an evaluation license.
<b>Recommended Response Action</b>	To replace a non-evaluation license, first delete the non-evaluation license, then import the evaluation license.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LIC012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The license file does not exist.
<b>Detailed Description</b>	This error may occur if: 1) The license was deleted by another user. 2) The license that is being imported may have been deleted from the temporary storage before the import operation completed.3) At start-up, License Manager does not find the license assigned to the device. This may occur if a power outage occurs before a license delete operation completes.
<b>Recommended Response Action</b>	Re-import the license.

**Applicable Event or Alert Types** No alerts are applicable for this message

## LIC201

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** License arg1 assigned to device arg2 expires in arg3 days.

**Arguments**

- arg1 = entitlement ID
- arg2 = device name
- arg3 = number of days

**Detailed Description** This license is going to expire. An expired license could result in the loss of functionality that is specific to the features supported by the license.

<b>Recommended Response Action</b>	Purchase a new license to prevent interruption of licensed features.
<b>Category</b>	Audit (LIC = Licensing)

## LOG003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	ConfigResults not available for log entry specified.
<b>Detailed Description</b>	The log entry with the specified InstanceID does not have any associated configuration results.
<b>Recommended Response Action</b>	Verify the ConfigResults availability for the InstanceID through enumeration of the LogEntry class and retry the operation. Refer to the Lifecycle Controller-Remote Services documentation.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LOG004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Resource allocation failure.
<b>Detailed Description</b>	The operation did not complete successfully because of lack of memory or file space in iDRAC firmware.

<b>Recommended Response Action</b>	Reset iDRAC and retry the operation.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LOG005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Cannot perform the operation due to an unknown error in iDRAC.
<b>Detailed Description</b>	The operation did not complete successfully because of an unknown error in iDRAC.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, reset the iDRAC.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LOG006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Test event generated for message ID arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = message ID</li> </ul>
<b>Detailed Description</b>	This message is generated while performing a Test Event action. Performing a Test Event action logs an event in the Lifecycle Log with the user specified message ID. It may also generate events through SNMP, email, or other event notification sources if they are enabled. The test event does not indicate that there is a hardware or software problem. It provides a mechanism for users to test their event processing applications.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LOG = Log Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LOG007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The previous log entry was repeated arg1 times.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = log entry count</li></ul>
<b>Detailed Description</b>	This message is generated after a series of sequential duplicate events. Log entry count is the number of times the previous message was repeated.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LOG = Log Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, LC Log*

## LOG008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The complete Lifecycle Log was successfully created for an export operation.
<b>Detailed Description</b>	The complete Lifecycle Log was successfully created for a requested export operation.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LOG = Log Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## LOG009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The current Lifecycle Log is successfully created for the view or export operation.
<b>Detailed Description</b>	The current Lifecycle Log is successfully created for the view or export operation.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LOG = Log Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## LOG201

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Recovered from Lifecycle Controller Log corruption.

**Detailed Description** Lifecycle Controller Log corruption was detected during iDRAC boot. The Lifecycle Controller Log was truncated at the point of corruption.

**Recommended Response Action** No response action is required.

**Category** Configuration (LOG = Log Event)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## LOG202

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Recovered from Lifecycle Controller Log comments file corruption.

**Detailed Description** Unable to access part of Lifecycle Controller Log comments file during iDRAC boot. The file was truncated at the point of corruption.

**Recommended Response Action** No response action is required.

**Category** Configuration (LOG = Log Event)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

<b>Message</b>	A diagnostic warning event occurred in the memory device with Serial No: arg1 and Part No: arg2 at arg3. Reseat the device (Extended ID: arg4).
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = serialNo</li><li>• arg2 = partNo</li><li>• arg3 = location</li><li>• arg4 = code</li></ul>
<b>Detailed Description</b>	A diagnostic warning event occurred in the memory device at location identified in the message. Reseating the device is recommended for remediation. Contact technical support if problem persists.
<b>Recommended Response Action</b>	Manually reseat the memory device. For instructions about reseating, see the respective servers PowerEdge servers Installation and Service Manual available on the support site. If the issue persists, contact your service provider, then provide this message number (MEM6102) and the extended ID displayed in the event message.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2266
<b>LCD Message</b>	Warning event at <location>. Reseat device.
<b>Redfish Event Type</b>	Alert

<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM6104

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A diagnostic warning event occurred in the memory device with Serial No: arg1 and Part No: arg2 at arg3. Perform a cold reboot(Extended ID: arg4).
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = serialNo</li><li>• arg2 = partNo</li><li>• arg3 = location</li><li>• arg4 = code</li></ul>
<b>Detailed Description</b>	A diagnostic warning event occurred in the memory device at location identified in the message. Performing a cold reboot is recommended for remediation. System will attempt to perform self-healing or self-correction.
<b>Recommended Response Action</b>	Perform a cold reboot to allow server to attempt self-healing or self-correction. If a cold reboot has already occurred subsequent to this message then no further action is required. If the issue persists, contact your service provider, then provide this message number (MEM6104) and the extended ID displayed in the event message.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Warning

<b>Trap/EventID</b>	2266
<b>LCD Message</b>	Warning event at <location>. Cold reboot system.
<b>Redfish Event Type</b>	Alert

<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM6106

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A diagnostic warning event occurred in the memory device at arg1. Contact service provider if issue persists. (Extended ID: arg2).
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = location</li> <li>• arg2 = code</li> </ul>
<b>Detailed Description</b>	A diagnostic warning event occurred in the memory device at location identified in the message. System will automatically attempt to perform self-healing or self-correction at next opportunity.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your service provider, then provide this message number (MEM6106) and the extended ID displayed in the event message.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2266
<b>LCD Message</b>	Warning event at <location>. Contact service if persistent.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM6107

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A diagnostic warning event occurred in the memory device at arg1. Retry operation. (Extended ID: arg2).
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = location</li> <li>• arg2 = code</li> </ul>
<b>Detailed Description</b>	A diagnostic warning event occurred in the memory device at location identified in the message. The attempted operation on this device has failed. Retry operation.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your service provider, then provide this message number (MEM6107) and the extended ID displayed in the event message.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2266
<b>LCD Message</b>	Warning event at <location>. Retry operation.

<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM6110

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A diagnostic warning event occurred in the memory device at arg1. Update device firmware. (Extended ID: arg2).
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = location</li> <li>arg2 = code</li> </ul>
<b>Detailed Description</b>	A diagnostic warning event occurred in the memory device at location identified in the message. Update the firmware for the memory device to enable new features or address known issues.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your service provider, then provide this message number (MEM6110) and the extended ID displayed in the event message.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2266

<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM7104

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A critical diagnostic event occurred in the memory device at arg1. Perform a cold reboot. (Extended ID: arg2).
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = location</li> <li>• arg2 = code</li> </ul>
<b>Detailed Description</b>	A critical diagnostic event occurred in the memory device at location identified in the message. Performing a cold reboot is recommended for remediation. System will attempt to perform self-healing or self-correction.
<b>Recommended Response Action</b>	Perform a cold reboot to allow server to attempt self-healing or self-correction. If a cold reboot has already occurred subsequent to this message then no further action is required. If the issue persists, contact your service provider, then provide this message number (MEM7104) and the extended ID displayed in the event message.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2265
<b>LCD Message</b>	Critical event at <location>. Cold reboot system.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM7107

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A critical diagnostic event occurred in the memory device at arg1. Retry operation. (Extended ID: arg2).
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = location</li><li>• arg2 = code</li></ul>
<b>Detailed Description</b>	A critical diagnostic event occurred in the memory device at location identified in the message. The attempted operation on this device has failed. Retry operation.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your service provider, then provide this message number (MEM7107) and the extended ID displayed in the event message.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2265
<b>LCD Message</b>	Critical event at <location>. Retry operation.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM7108

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A critical diagnostic event occurred in the memory device at arg1. Sanitize the device. (Extended ID: arg2).
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = location</li><li>• arg2 = code</li></ul>
<b>Detailed Description</b>	A critical diagnostic event occurred in the memory device at location identified in the message. The memory device has detected an error during startup that either cannot be recovered or has been moved from another server, which has resulted in a unusable configuration data.
<b>Recommended Response Action</b>	To recover the device, sanitize the memory device. Sanitizing the device will destroy all data on the device. If the issue persists, contact your service provider, then provide this message number (MEM7108) and the extended ID displayed in the event message.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2265
<b>LCD Message</b>	Critical event at <location>. Sanitize device.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, LCD, OS Log

## MEM9050

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The Non-Volatile Dual In-line Memory Module (NVDIMM) device in the slot arg1 has regained persistency and is available for use.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = location</li></ul>
<b>Detailed Description</b>	The NVDIMM device in the slot identified in the message has regained persistency and is available for use.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2267
<b>OMSA Event ID</b>	5425
<b>OMSA Trap ID</b>	5425
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM9060

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The self-heal operation successfully completed on the memory module.
<b>Detailed Description</b>	The self-heal operation successfully completed on the memory module.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2267
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM9061

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	An Information-Only event was detected on the Non-Volatile Dual In-line Memory Module (NVDIMM) device in the slot arg1. The NVDIMM is operating normally.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = location</li> </ul>
<b>Detailed Description</b>	The NVDIMM device in the slot identified in the message is functioning normally.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2267
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM9070

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The erase operation on the non-volatile DIMM with serial number arg1 in slot arg2 is successfully completed.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = serial number</li> <li>• arg2 = slot number</li> </ul>
<b>Detailed Description</b>	The erase operation for the specified DIMM completed successfully.
<b>Recommended Response Action</b>	No response action is required but it is recommended that the system be upgraded to the latest BIOS.
<b>Category</b>	Configuration (MEM = Memory)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM9071

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to complete the erase operation on the non-volatile DIMM with serial number arg1 in slot arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = serial number</li> <li>• arg2 = slot number</li> </ul>
<b>Detailed Description</b>	The erase operation could not be completed for the DIMM identified in the message.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your service provider. It is also recommended that the system be upgraded to the latest BIOS.
<b>Category</b>	Configuration (MEM = Memory)
<b>Severity</b>	Critical

<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM9072

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system memory has detected an error on a memory transaction at the location arg1. Reboot the system for auto-healing.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = location</li> </ul>
<b>Detailed Description</b>	The system has detected a memory error which cannot be immediately corrected. The OS has been notified of the memory error location. Recommended action is to warm reboot the system to initiate auto-healing and to reinitialize memory for optimized performance.
<b>Recommended Response Action</b>	Perform a warm reboot to allow server to attempt self-healing or self-correction. If a warm reboot has already occurred subsequent to this message then no further action is required. If the issue persists, contact your service provider and provide this message number (MEM9072).
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2266
<b>LCD Message</b>	Warning event at <location>. Warm reboot system.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## MEM9073

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update firmware on a Non-Volatile Dual In-line Memory Module (NVDIMM) device in the slot arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = location</li> </ul>
<b>Detailed Description</b>	Unable to update firmware for the NVDIMM identified in the message.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, replace the NVDIMM, or contact your service provider. It is also recommended that the system be upgraded to the latest BIOS.
<b>Category</b>	System Health (MEM = Memory)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

# NFAB—Fabric Event Messages

## NFAB0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The health status of SmartFabric arg1 is ok.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = fabric ID</li></ul>
<b>Detailed Description</b>	The health status of SmartFabric identified in the message is ok.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The health status of SmartFabric ID arg1 is in Warning condition.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = fabric ID</li></ul>
<b>Detailed Description</b>	The health status of SmartFabric identified in the message is in Warning condition.
<b>Recommended Response Action</b>	Make sure that there are no ongoing maintenance activities on the following: 1) MCM Group 2) Management Module 3) SmartFabric 4) I/O Module. Make sure that the I/O Module management interface configuration and physical connections are appropriate for the model of I/O module. Make sure that all I/O Modules in the fabric are healthy.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The health status of SmartFabric ID arg1 is in Critical condition.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = fabric ID</li></ul>
<b>Detailed Description</b>	The health status of SmartFabric identified in the message is in Critical condition.
<b>Recommended Response Action</b>	Make sure that the I/O Module, management interface configuration, and physical connection are appropriate for the node. Also, make sure that the maintenance activities on the following are completed before proceeding further: 1) Ongoing MCM Group maintenance 2) Management Module 3) Fabric 4) Node. For more information, see the Fabric Health issue list.

<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric ID arg1 is valid.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = fabric ID</li> </ul>
<b>Detailed Description</b>	The SmartFabric identified in the message is valid. The SmartFabric validation criteria such as design, fabric node inventory, I/O module placement requirements, and inter-node connectivity are consistent.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric ID arg1 is invalid.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = fabric ID</li> </ul>
<b>Detailed Description</b>	The SmartFabric identified in the message is invalid. The SmartFabric validation criteria such as design, fabric node inventory, I/O module placement requirements, and inter-node connectivity are inconsistent.
<b>Recommended Response Action</b>	For more information about the configuration, inventory, and placement requirements, see the predefined System Architecture documentation available on the support site.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to complete the SmartFabric validation operation because the I/O Module information is not available.
----------------	--

<b>Detailed Description</b>	The SmartFabric validation can not be completed because the I/O Module information is not available.
<b>Recommended Response Action</b>	Make sure that all the I/O Modules are in the chassis, discovered in OpenManage Enterprise-Modular, and healthy.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the SmartFabric because the I/O Modules are in different named slots.
<b>Detailed Description</b>	The SmartFabric cannot be validated because the I/O Modules are in different named slots.
<b>Recommended Response Action</b>	Make sure that the I/O Modules are in the same named slot. For example, A1 and A2.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the SmartFabric because the I/O Modules are in the same named slot.
<b>Detailed Description</b>	The SmartFabric cannot be validated because the I/O Modules are in the same named slot.
<b>Recommended Response Action</b>	Make sure that the I/O Modules are in different slots, For example, A1 and A2.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the SmartFabric because the MX9116n Fabric Engines are in the same chassis and the selected fabric design requires them to be in different chassis.
<b>Detailed Description</b>	The SmartFabric cannot be validated because the MX9116n Fabric Engines are in the same chassis and the selected fabric design requires them to be in different chassis.

<b>Recommended Response Action</b>	Make sure that the MX9116n Fabric Engines are in different chassis.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the SmartFabric because the MX5108n Ethernet Switches are in different chassis. This is not supported.
<b>Detailed Description</b>	The SmartFabric cannot be validated because the MX5108n Ethernet Switches are in different chassis. This is not supported.
<b>Recommended Response Action</b>	Make sure that the MX5108n Ethernet Switches are in the same chassis.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the SmartFabric because the I/O Modules are different models.
<b>Detailed Description</b>	The SmartFabric cannot be validated because the I/O Modules are different models.
<b>Recommended Response Action</b>	Make sure that all the I/O Modules are the same model and retry the operation.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the SmartFabric because the VLTi cable for link arg1 is not connected as per fabric design arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Design Link</li> <li>arg2 = Design</li> </ul>

<b>Detailed Description</b>	The SmartFabric cannot be validated because the VLTi cable is not connected to the correct port as per the selected fabric design.
<b>Recommended Response Action</b>	Make sure that the VLTi cables are connected to the correct ports as per the selected fabric design.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the SmartFabric because the fabric design arg1 is unavailable.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Design</li> </ul>
<b>Detailed Description</b>	The SmartFabric cannot be validated because the fabric design is unavailable.
<b>Recommended Response Action</b>	Make sure that the correct fabric design information is provided and retry the operation.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric is not healthy because the I/O Module arg1 is not healthy.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Node ID</li> </ul>
<b>Detailed Description</b>	The SmartFabric is not healthy because the I/O Module identified in the message is not healthy.
<b>Recommended Response Action</b>	Fix the health of the I/O Module.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric is not healthy because the I/O Module arg1 is offline or can not be communicated with.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Node Id</li> </ul>
<b>Detailed Description</b>	The SmartFabric is not healthy because the I/O Module identified in the message is offline or cannot be communicated with.
<b>Recommended Response Action</b>	Make sure that the I/O Module is online and healthy.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric is not healthy because interface arg1 for uplink arg2 is not in operational status.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Interface Name</li> <li>arg2 = Uplink Id</li> </ul>
<b>Detailed Description</b>	The SmartFabric is not healthy because the interface for an uplink mentioned in the message is not in operational status.
<b>Recommended Response Action</b>	Make sure that all the uplink interfaces are in operational status.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The fabric is not healthy because one or more VLTi links are not connected.
<b>Detailed Description</b>	The SmartFabric is not healthy because one or more VLTi links are not connected.
<b>Recommended Response Action</b>	Make sure that the VLTi cables for all ISLs are connected and operational as per the selected fabric design.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0018

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric is not healthy because at least one uplink must be configured.
<b>Detailed Description</b>	The SmartFabric is not healthy because at least one uplink must be configured.
<b>Recommended Response Action</b>	Make sure at least one uplink is configured for the SmartFabric.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0019

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric is not healthy because the uplink arg1 interface arg2 is not bonded to the other interfaces in the uplink.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Uplink Id</li><li>• arg2 = Interface Id</li></ul>
<b>Detailed Description</b>	The SmartFabric is not healthy because one or more of the uplink interfaces are not bonded.
<b>Recommended Response Action</b>	Make sure that the Link Aggregation Control Protocol (LACP) is enabled on all ports on the remote switch to which the uplink ports from the fabric are connected.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0020

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric is not healthy because the configuration of uplink arg1 across the fabric switches is asymmetrical.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Uplink Id</li></ul>
<b>Detailed Description</b>	The SmartFabric is not healthy because the configuration of the uplink identified in the message is not symmetrical across the fabric switches.
<b>Recommended Response Action</b>	Make sure the configuration for the uplink is symmetrical across the fabric switches.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NFAB0021

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The health status of SmartFabric arg1 with the fabric ID arg2 is ok.

**Arguments**

- arg1 = fabric name
- arg2 = fabric ID

**Detailed Description** The health status of SmartFabric identified in the message is ok.

**Recommended Response Action** No response action is required.

**Category** System Health (NFAB = Fabric)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NFAB0022

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The health status of SmartFabric arg1 with the fabric ID arg2 is in the Warning state.

**Arguments**

- arg1 = fabric name
- arg2 = fabric ID

**Detailed Description** The health status of the SmartFabric identified in the message is in the Warning state.

**Recommended Response Action** Make sure that there are no ongoing maintenance activities on the following: 1) MCM Group 2) Management Module 3) SmartFabric 4) I/O Module. Make sure that the I/O Module management interface configuration and physical connections are appropriate for the model of I/O module. Make sure that all I/O Modules in the fabric are healthy.

**Category** System Health (NFAB = Fabric)

**Severity** Warning

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NFAB0023

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The health status of SmartFabric arg1 with the fabric ID arg2 is in Critical state.

**Arguments**

- arg1 = fabric name
- arg2 = fabric ID

**Detailed Description** The health status of the SmartFabric identified in the message is in Critical state.

<b>Recommended Response Action</b>	Make sure that there are no ongoing maintenance activities on the following: 1) MCM Group 2) Management Module 3) SmartFabric 4) I/O Module. Make sure that the I/O Module management interface configuration and physical connections are appropriate for the model of I/O module. Make sure that all I/O Modules in the fabric are healthy.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0024

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric arg1 with the fabric ID arg2 is valid.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = fabric name</li> <li>• arg2 = fabric ID</li> </ul>
<b>Detailed Description</b>	The SmartFabric identified in the message is valid. The SmartFabric validation criteria such as design, fabric node inventory, I/O module placement requirements, and inter-node connectivity are consistent.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0025

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The validation for SmartFabric arg1 with the fabric ID arg2 has failed.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = fabric Name</li> <li>• arg2 = fabric ID</li> </ul>
<b>Detailed Description</b>	The validation of the SmartFabric for the selected fabric design has failed.
<b>Recommended Response Action</b>	Ensure that I/O module placement and VLTi cable connections match the requirements for the selected fabric design.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0026

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The creation or deletion operation of SmartFabric arg1 with the fabric ID arg2 is started.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = fabric Name</li><li>• arg2 = fabric ID</li></ul>
<b>Detailed Description</b>	The creation or deletion of SmartFabric with the fabric ID identified in the message is started.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0027

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric arg1 with the fabric ID arg2 is currently being created or deleted.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = fabric name</li><li>• arg2 = fabric ID</li></ul>
<b>Detailed Description</b>	The SmartFabric with the fabric ID identified in the message is currently being created or deleted.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0028

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The creation or deletion operation of SmartFabric arg1 with the fabric ID arg2 is successfully completed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = fabric name</li><li>• arg2 = fabric ID</li></ul>
<b>Detailed Description</b>	The creation or deletion of SmartFabric with the fabric ID identified in the message is successfully completed.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NFAB = Fabric)

<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0029

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to either create or delete the SmartFabric arg1 with the fabric ID arg2 because of many ongoing maintenance operations.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = fabric Name</li> <li>• arg2 = fabric ID</li> </ul>
<b>Detailed Description</b>	The creation or deletion of SmartFabric with the fabric ID identified in the message cannot be completed because of many ongoing maintenance operations.
<b>Recommended Response Action</b>	Make sure of the following and retry the operation: 1) That there are no ongoing maintenance activities on the following: 1a) MCM Group 1b) Management Module 1c) SmartFabric 1d) I/O Module. 2) That the I/O Module management interface configuration and physical connections are appropriate for the model of I/O module. 3) That all I/O Modules in the fabric are healthy.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0030

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The network fabric arg1 having fabric ID arg2 new design is arg3.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = Fabric Name</li> <li>• arg2 = Fabric Id</li> <li>• arg3 = Fabric Design</li> </ul>
<b>Detailed Description</b>	New fabric design is updated after the chassis change.
<b>Recommended Response Action</b>	No Response action is required.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0031

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The SmartFabric arg1, having the fabric ID arg2, is successfully deleted by the Fabric Manager. The switches will automatically restart and be in the Full Switch mode.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = smart Fabric Name</li> <li>• arg2 = fabric ID</li> </ul>
<b>Detailed Description</b>	The SmartFabric identified in the message is successfully deleted by the Fabric Manager. The switches will automatically restart and be in the Full Switch mode.
<b>Recommended Response Action</b>	After the switches restart, make sure that all the switches are online and in the Full Switch mode.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0032

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The switch arg1 is detected as a replacement switch for a faulty or old switch arg2 which must be replaced. The old or faulty switch belongs to the SmartFabric arg3 that has the fabric ID as arg4.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = New switch service Tag</li> <li>• arg2 = faulty switch service tag</li> <li>• arg3 = fabric name</li> <li>• arg4 = fabric id</li> </ul>
<b>Detailed Description</b>	The switch identified in the message is detected as a potential replacement switch for a faulty or old switch, which must be replaced. The old or faulty switch belongs to the SmartFabric that has the fabric ID as identified in the message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0033

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to mark the Uplink arg1 as the default Uplink because it is not available in the fabric.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = uplinkID</li> </ul>
<b>Detailed Description</b>	The Uplink ID identified in the message cannot be marked as the default Uplink because it is not available in the fabric.
<b>Recommended Response Action</b>	Make sure the Uplink ID is available and retry the operation.
<b>Category</b>	Configuration (NFAB = Fabric)
<b>Severity</b>	Warning

<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NFAB0034

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Uplinkarg1 is not supported type for the default uplink.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = uplink id</li> </ul>
<b>Detailed Description</b>	The uplink type is not supported for the default uplink.
<b>Recommended Response Action</b>	Enter a valid uplink and retry the operation.
<b>Category</b>	Configuration (NFAB = Fabric)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NIC—NIC Configuration Event Messages

### NIC001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The command was successful.
<b>Detailed Description</b>	The command was successful.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

### NIC002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Resource allocation failure
<b>Detailed Description</b>	Unable to allocate required memory to perform the operation.

<b>Recommended Response Action</b>	Power cycle system and reapply firmware packages for Lifecycle Controller and iDRAC.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Missing required parameter
<b>Detailed Description</b>	An invalid number of arguments was passed to the method.
<b>Recommended Response Action</b>	Enter all the required command parameters. Check documentation and try again.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid parameter value for arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = attribute name</li> </ul>
<b>Detailed Description</b>	The value for the specified parameter is invalid.
<b>Recommended Response Action</b>	Verify that parameter values passed to the method are entered as they appear in the enumeration and parameter data type matches the documentation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Mismatch in AttributeName and AttributeValue count
<b>Detailed Description</b>	The number of AttributeName and AttributeValue parameters do not match.
<b>Recommended Response Action</b>	Pass the same number of parameters for AttributeName and AttributeValue. Refer to documentation for method input parameter details.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A configuration job already exists, Cannot set attribute on specified target until existing job is completed or is cancelled
<b>Detailed Description</b>	A configuration job already exists for the specified target. No further configuration operation is allowed until the existing job completes or the job is cancelled.
<b>Recommended Response Action</b>	Do one of the following: 1) Wait for the existing configuration job to complete and retry the operation, 2) To continue with a configuration change, cancel the existing job and retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A configuration job already exists, Cannot create another configuration job on specified target until existing job is completed or is cancelled
<b>Detailed Description</b>	A configuration job already exists for the specified target. No further configuration operation is allowed until the existing job completes or the job is cancelled.
<b>Recommended Response Action</b>	Do one of the following: 1) Wait for the existing configuration job to complete and retry the operation, 2) To continue with a configuration change, cancel the existing job and retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning

<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	No pending data present to create a Configuration job
<b>Detailed Description</b>	No changes are available between the previous configuration and the current configuration. To create a Configuration job, at least one attribute should be changed.
<b>Recommended Response Action</b>	Change the configuration of one or more attributes and then create a configuration job.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Lifecycle Controller is currently in use.
<b>Detailed Description</b>	Lifecycle Controller cannot gain access to internal storage because it is use by another application or operation.
<b>Recommended Response Action</b>	Wait for the current Lifecycle Controller operation to complete. Verify that the system is 1) Not currently in Lifecycle Controller Unified Server Configurator utility 2) Not waiting for user intervention at F1/F2 POST error 3) Not in any of the device or controller Option ROMs and retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Lifecycle Controller is not enabled, cannot create Configuration job.
----------------	---

<b>Detailed Description</b>	For 11G systems: System Services must be enabled to perform the requested operation. System Services has been disabled through the iDRAC configuration utility accessed by pressing CTRL+E on boot up or through a remote operation. For 12G and above generations: Lifecycle Controller must be enabled to perform the requested operation. Lifecycle Controller has been disabled by pressing F2 Setup, selecting iDRAC Configuration, and selecting Lifecycle Controller Settings on boot up or through a remote operation.
<b>Recommended Response Action</b>	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing on the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Configuration job already created, pending data cannot be deleted
<b>Detailed Description</b>	Configuration job already created on the specified target. No further command is allowed until the existing job is completed.
<b>Recommended Response Action</b>	Cancel the configuration job or wait for the job to complete. Refer to documentation on job cancellation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	No pending data to delete.
<b>Detailed Description</b>	No changes to BIOS attribute data are available between the previous configuration and the current configuration.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable

<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid AttributeName: arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = attribute name</li> </ul>
<b>Detailed Description</b>	An unknown AttributeName was entered for the operation.
<b>Recommended Response Action</b>	Enter the correct AttributeName available in the system. Refer to the enumeration response for desired attribute.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid AttributeValue for AttributeName arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = attribute name</li> </ul>
<b>Detailed Description</b>	AttributeValue may be invalid because of the following causes: 1) Length of new AttributeValue is not within minLength and maxLength 2) Value of new AttributeValue is not within LowerBound and UpperBound 3) Value of new AttributeValue is not one of the possible values.
<b>Recommended Response Action</b>	Refer to the documentation on valid attribute values.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	AttributeValue cannot be changed to read only AttributeName arg1.
----------------	---

<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = attribute name</li> </ul>
<b>Detailed Description</b>	A set attribute operation was attempted on a read only attribute.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	AttributeValue cannot be changed for disabled AttributeName arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = attribute name</li> </ul>
<b>Detailed Description</b>	A set attribute operation was attempted on a disabled attribute.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to delete vFlash pending one-time boot configuration
<b>Detailed Description</b>	Unable to delete vFlash pending one-time boot configuration.
<b>Recommended Response Action</b>	Remove AC power from system and after restoring AC power, retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC018

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid BIOS password.
<b>Detailed Description</b>	The input BIOS password used in the operation is invalid.
<b>Recommended Response Action</b>	Use a valid BIOS password and retry.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC021

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Cannot authenticate specified BIOS password.
<b>Detailed Description</b>	The old BIOS password used to change the password is incorrect.
<b>Recommended Response Action</b>	Enter the correct old password for the BIOS and retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC022

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to set the BIOS password because of a jumper setting on the motherboard.
<b>Detailed Description</b>	The current BIOS password jumper setting prevents the BIOS password from being changed.
<b>Recommended Response Action</b>	Change the jumper setting to enable setting the BIOS password.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

**Applicable Event or Alert Types** CMC—Not Applicable

## NIC023

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Cannot perform the operation due to an unknown error in iDRAC.

**Detailed Description** The operation did not complete successfully because of an unknown error in iDRAC.

**Recommended Response Action** Retry the action. If the issue persists, reset the iDRAC.

**Category** Configuration (NIC = NIC Configuration)

**Severity** Warning

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## NIC024

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The set operation did not complete successfully as the attribute is read-only.

**Detailed Description** The attribute specified in the operation is currently read only and the value cannot be modified.

**Recommended Response Action** For more information on the attribute, see Lifecycle Controller-Remote Services documentation.

**Category** Configuration (NIC = NIC Configuration)

**Severity** Warning

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## NIC025

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to start the configuration operation because System Lockdown mode is enabled.

**Detailed Description** The configuration operation cannot be started because the System Lockdown mode is enabled.

**Recommended Response Action** Make sure that the Lockdown.1#SystemLockdown attribute is set to Disabled and then retry the operation. For information about the Lockdown mode, see the relevant iDRAC Users Guide available on the support site.

**Category** Configuration (NIC = NIC Configuration)

<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC100

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The arg1 Port arg2 network link is down.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = Controller</li> <li>• arg2 = Port</li> </ul>
<b>Detailed Description</b>	The network link is down. Either the network cable is not connected or the network device is not working.
<b>Recommended Response Action</b>	Verify that the network port is enabled and if the port has Activity/Speed LEDs, that they are lit. Check the network cable, network cable connections, and the attached network switch.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2090
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC101

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The arg1 Port arg2 network link is started.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = controller ID</li> <li>• arg2 = port ID</li> </ul>
<b>Detailed Description</b>	The transition from network link not started (down) to network link started (up) has been detected on the NIC controller port identified in the message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2091
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC500

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The requested object is not allowed to be configured if DHCP is enabled.
<b>Detailed Description</b>	The values of IP Address is not allowed to change if DHCP is enabled.
<b>Recommended Response Action</b>	Disable DHCP and then modify the value.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC501

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The requested object is not allowed to be configured if Auto Config is enabled.
<b>Detailed Description</b>	Autoconfig assigns values to the network components.
<b>Recommended Response Action</b>	Disable Autoconfig and then modify the value.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC502

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	DHCP is required to be enabled on the NIC before DHCP can be enabled for DNS server or domain name objects.
<b>Detailed Description</b>	The value of the specified parameter cannot be changed.
<b>Recommended Response Action</b>	Enable DHCP on the NIC before enabling it for DNS.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## NIC503

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The DNS server IP address is not allowed to be configured if DNS server DHCP (cfgDNSServersFromDHCP) is enabled.

**Detailed Description** The value of the specified parameter cannot be changed.

**Recommended Response Action** Disable the cfgDNSServersFromDHCP object.

**Category** System Health (NIC = NIC Configuration)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## NIC504

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The IPv6 DNS Server IP address is not allowed to be configured if IPv6 DNS Server DHCP (cfgIPv6DNSServersFromDHCP6) is enabled.

**Detailed Description** The value of the specified parameter cannot be changed.

**Recommended Response Action** Disable the cfgIPv6DNSServersFromDHCP6 object.

**Category** System Health (NIC = NIC Configuration)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## NIC505

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The DNS domain name is not allowed to be configured if domain name DHCP (cfgDNSDomainNameFromDHCP) is enabled.

**Detailed Description** The value of the specified parameter cannot be changed.

<b>Recommended Response Action</b>	Disable the cfgDNSDomainNameFromDHCP object.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## NIC506

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The requested object requires DNS registration to be enabled.
<b>Detailed Description</b>	The requested operation requires the DNS registration to be enabled.
<b>Recommended Response Action</b>	Enable the DNS registration.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

## NINT—Interface Event Messages

### NINT0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The interface arg1 is in operational status.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = interface ID</li> </ul>
<b>Detailed Description</b>	The interface identified in the message is in operational status.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NINT = Interface)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NINT0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The interface arg1 is not operational.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = interface ID</li> </ul>
<b>Detailed Description</b>	The interface identified in the message is not operational.
<b>Recommended Response Action</b>	Confirm the interface configuration and the associated physical port connectivity to determine the operational status of the interface.
<b>Category</b>	Audit (NINT = Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NLIN—Link Event Messages

### NLIN0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The link between Source arg1 and Destination arg2 is created.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = source interface ID</li> <li>• arg2 = destination interface ID</li> </ul>
<b>Detailed Description</b>	The link between Source and Destination identified in the message is created.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NLIN = Link)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NLIN0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The link arg1 is successfully deleted.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = Source Interface ID</li> </ul>
<b>Detailed Description</b>	The link identified in the message is successfully deleted.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NLIN = Link)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNOD—Node Event Messages

### NNOD0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The I/O Module arg1 is operational.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = Node ID</li> </ul>
<b>Detailed Description</b>	The I/O Module identified in the message is operational.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NNOD = Node)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNOD0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The operational status of I/O Module arg1 might have ended.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Node ID</li></ul>
<b>Detailed Description</b>	The operational status of the I/O Module identified in the message has ended. Possible reasons could be that the MCM Group maintenance is in progress or Management Module maintenance is in progress or Fabric maintenance is in progress or Node maintenance is in progress.
<b>Recommended Response Action</b>	Make sure that the I/O Module, management interface configuration and physical connectivity are appropriate for the node. Also ensure that all the ongoing MCM Group maintenance and Management Module maintenance and Fabric maintenance and Node maintenance have completed before proceeding further.
<b>Category</b>	System Health (NNOD = Node)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNOD0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The I/O Module arg1 is discovered.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Node ID</li></ul>
<b>Detailed Description</b>	The I/O Module identified in the message is discovered.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NNOD = Node)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNOD0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to detect the I/O Module arg1 because of physical connection and operational issues.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Node ID</li></ul>
<b>Detailed Description</b>	The I/O Module identified in the message cannot be detected because of physical connection and operational issues.
<b>Recommended Response Action</b>	Make sure that the physical presence and operations of the I/O Module are correct.
<b>Category</b>	Audit (NNOD = Node)
<b>Severity</b>	Warning

<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNOD0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The MX7116n Fabric Expander Module arg1 is discovered.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = spinner ID</li> </ul>
<b>Detailed Description</b>	The MX7116n Fabric Expander Module identified in the message is discovered.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NNOD = Node)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNOD0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to detect the MX7116n Fabric Expander Module arg1 because of physical connection issues.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = spinner ID</li> </ul>
<b>Detailed Description</b>	The MX7116n Fabric Expander Module identified in the message cannot be detected because of physical connection issues.
<b>Recommended Response Action</b>	Make sure that the MX7116n Fabric Expander Module is properly connected.
<b>Category</b>	Audit (NNOD = Node)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNOD0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to perform a simple I/O module swap operation because the replacement I/O module software version arg1 is different from the fabric software version arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = software version</li> <li>arg2 = software version</li> </ul>
<b>Detailed Description</b>	A simple I/O module swap operation cannot be performed because the replacement I/O module software version is different from the fabric software version as identified in the message.

<b>Recommended Response Action</b>	Make sure that the software versions of replacement I/O module and fabric are the same.
<b>Category</b>	Audit (NNOD = Node)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNOD0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The Restore operation of the I/O Module arg1 is not started because the node is offline.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = IOM Name</li> </ul>
<b>Detailed Description</b>	IO Module identified in the message is OFFLINE in Fabric Manager during Smart Fabric restore operation, Fabric might be restored as unhealthy state.
<b>Recommended Response Action</b>	Once OME-M restore is completed, Verify and ensure the following: 1) Node is correctly inserted in the slot. 2) make the IO Module identified in the message online by performing a power on or power cycle activity for the IO Module.
<b>Category</b>	Configuration (NNOD = Node)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNPA—Network Partition Event Messages

### NNPA0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or enable the server profile because the user is not allowed to configure both SharedLOM native VLAN and SharedLOM tagged VLAN Networks attributes.
<b>Detailed Description</b>	This error is returned if the Server profile is configured both SharedLOM native VLAN and SharedLOM tagged VLAN Networks attributes.
<b>Recommended Response Action</b>	Enter either SharedLOM native VLAN or SharedLOM tagged VLAN Networks configurations for Server profile partition.
<b>Category</b>	Configuration (NNPA = Network Partition)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNPA0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or deploy the server interface profile because native VLAN or tagged VLAN configuration is not allowed on the parent port if nPar partitioning is enabled.
<b>Detailed Description</b>	The server interface profile cannot be created or deployed because either native VLAN or tagged VLAN configs are present in the payload for the parent interface when nPar partitioning is enabled.
<b>Recommended Response Action</b>	Make sure to remove the native VLAN or tagged VLAN Configurations in the payload for the parent interface, if nPar partitioning is enabled, then retry the operation.
<b>Category</b>	Configuration (NNPA = Network Partition)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNPA0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or enable the server profile because the more than one nPar-parent-tagged network cannot be configured at a time.
<b>Detailed Description</b>	The server profile cannot be created or enabled because the more than one nPar-parent-tagged network cannot be configured at a time.
<b>Recommended Response Action</b>	Retry the operation by configuring only one nPar-parent-tagged network in the server profile.
<b>Category</b>	Configuration (NNPA = Network Partition)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNPA0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or deploy the server profile or server interface profile because the network type (FCoE) of native VLAN or tagged VLAN network is not supported for Network Partitions (NPAR).
<b>Detailed Description</b>	The server profile or server interface profile cannot be created or deployed because the network type (FCoE) of native VLAN or tagged VLAN network is not supported for Network Partitions (NPAR).
<b>Recommended Response Action</b>	Make sure to configure the native VLAN or tagged network with supported network type and then retry the operation.
<b>Category</b>	Configuration (NNPA = Network Partition)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NNPA0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to create the partition interface because the properties of native VLAN and tagged VLAN of the partition interface are the same.

**Detailed Description** The partition cannot be created because the properties of native VLAN and tagged VLAN of the partition interface are the same.

**Recommended Response Action** Enter a valid and unique ID for native and tagged VLANs and retry the operation.

**Category** Configuration (NNPA = Network Partition)

**Severity** Warning

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NNPA0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to create or deploy the server interface profile because untagged VLAN configuration is not allowed on the parent interface if nPar partition is enabled.

**Detailed Description** The server interface profile cannot be created or deployed because an untagged VLAN config is present in the payload for the parent interface when nPar partitioning is enabled.

**Recommended Response Action** Make sure to remove the untagged VLAN config in the payload for the parent interface if nPar partitioning is enabled, then retry the operation.

**Category** Configuration (NNPA = Network Partition)

**Severity** Warning

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NNPA0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to configure the invalid tagged VLAN network ID in the server profile and server interface profile because the network partition is enabled.

**Detailed Description** The Invalid tagged VLAN network ID cannot be configured in the server profile and server interface profile because the network partition is enabled.

**Recommended Response Action** Configure valid tagged VLAN network ID in the server profile and server interface profile.

**Category** Configuration (NNPA = Network Partition)

<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNPA0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the server interface profile because the Network Partition (NPAR) count in the existing server interface profile is not same as the NPAR count in the new server interface profile.
<b>Detailed Description</b>	The server interface profile cannot be updated because the Network Partition (NPAR) count in the existing server interface profile is not same as the NPAR count in the new server interface profile.
<b>Recommended Response Action</b>	In the PUT query payload request, enter Network Partition (NPAR) IDs same as the existing server interface profile, and then retry the operation.
<b>Category</b>	Configuration (NNPA = Network Partition)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNPA0011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the server interface profile along with partitions because the partition ID sequence is invalid.
<b>Detailed Description</b>	The server interface profile along with partitions cannot be created or updated because the partition ID sequence is invalid.
<b>Recommended Response Action</b>	Enter a valid partition ID sequence and retry the operation. The partition ID must start with 1 as the first number.
<b>Category</b>	Configuration (NNPA = Network Partition)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNPA0012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure Maximum Transmission Unit (MTU) on the interface arg1 because the interface is of the Network Partitions (NPAR) type.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Interface Name</li> </ul>
<b>Detailed Description</b>	The Maximum Transmission Unit (MTU) cannot be configured on the specified interface because it is of the Network Partitions (NPAR) type.

<b>Recommended Response Action</b>	Select a different interface type and retry the operation.
<b>Category</b>	Configuration (NNPA = Network Partition)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NNPA0013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Breakout property on the port-group or interface arg1 because either the child interface of the port-group or the interface is partitioned.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Interface Name</li> </ul>
<b>Detailed Description</b>	The breakout property on the port-group or interface identified on the message cannot be configured because either the child interface of port-group or the interface is partitioned.
<b>Recommended Response Action</b>	Remove the partition configurations and retry the operation.
<b>Category</b>	Configuration (NNPA = Network Partition)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NSER—Server Event Messages

### NSER0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The server arg1 is detected.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Server ID</li> </ul>
<b>Detailed Description</b>	The server identified in the message is detected.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NSER = Server)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NSER0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The server arg1 is not detected.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Server ID</li></ul>
<b>Detailed Description</b>	The server identified in the message is not detected. Possible reasons could be that the fabric node to which the server is connected is operationally down or the server is moved or replaced from the existing slot.
<b>Recommended Response Action</b>	Make sure that the server is physically present and operational. Also ensure that the fabric node that is connected to the server is operational.
<b>Category</b>	Audit (NSER = Server)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NSER0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The server arg1 is onboarded.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = server ID</li></ul>
<b>Detailed Description</b>	The configuration of server identified in the message is validated and onboarded.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NSER = Server)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NSER0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The server arg1 is offboarded.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Server Id</li></ul>
<b>Detailed Description</b>	The detected server and its configuration is no longer validated.
<b>Recommended Response Action</b>	Make sure that the server is physically present and operational.
<b>Category</b>	Audit (NSER = Server)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NSER0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The server arg1 with Server Interface arg2 is onboarded.

**Arguments**

- arg1 = server ID
- arg2 = server interface ID

**Detailed Description** The configuration of server identified in the message is validated and successfully onboarded.

**Recommended Response Action** No response action is required.

**Category** Audit (NSER = Server)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NSER0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Server arg1 ServerInterface arg2 is offboarded.

**Arguments**

- arg1 = Server Id
- arg2 = Server Interface Id

**Detailed Description** The detected server interface and its configuration is not validated.

**Recommended Response Action** Make sure that the server interface is physically present and operational.

**Category** Audit (NSER = Server)

**Severity** Warning

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NSER0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The server arg1 having the OnboardInterface arg2and Server Interfaces: arg3, are bonded.

**Arguments**

- arg1 = server ID
- arg2 = Onboard Interface ID
- arg3 = server interface IDs

**Detailed Description** The server and server interfaces identified in the message are bonded.

<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NSER = Server)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NSER0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The server arg1 having the OnboardInterface arg2 is unbonded.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = server ID</li> <li>arg2 = OnboardInterface ID</li> </ul>
<b>Detailed Description</b>	The server and server interfaces identified in the message are unbonded.
<b>Recommended Response Action</b>	Make sure the server interfaces configuration are correct.
<b>Category</b>	Audit (NSER = Server)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVCH—Chassis Event Messages

### NVCH0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve the chassis information because the chassis does not exist.
<b>Detailed Description</b>	The chassis information cannot be retrieved because the chassis does not exist.
<b>Recommended Response Action</b>	Enter a valid chassis and retry the operation.
<b>Category</b>	Configuration (NVCH = Chassis)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

# NVCO—Common Event Messages

## NVCO0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to service the request because of an internal system error.
<b>Detailed Description</b>	The request failed due to internal system error.
<b>Recommended Response Action</b>	Retry the operation after some time. If the issue persists, contact the administrator.
<b>Category</b>	Configuration (NVCO = Common)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVCO0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the name because the configured name exceeds the limit of 256 characters in size.
<b>Detailed Description</b>	The name cannot be configured because the configured name exceeds 256 characters in size.
<b>Recommended Response Action</b>	Enter a name within the range of 256 characters and retry the operation.
<b>Category</b>	Configuration (NVCO = Common)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVCO0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the description because the configured description exceeds the limit of 256 characters in size.
<b>Detailed Description</b>	The description cannot be configured because the configured description exceeds 256characters in size.
<b>Recommended Response Action</b>	Enter a description within the range of 256characters and retry the operation.
<b>Category</b>	Configuration (NVCO = Common)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVCO0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to configure the port properties in the Fabric mode because data entered in the Description field is more than 240 characters.

**Detailed Description** The port properties in the Fabric mode cannot be configured because data entered in the Description field is more than 240 characters.

**Recommended Response Action** Make sure that the port description is equal to or less than 240 characters and retry the operation.

**Category** Configuration (NVCO = Common)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVFA—Fabric Event Messages

### NVFA0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to configure fabric because the fabric already exists.

**Detailed Description** The fabrics cannot be configured because the fabric already exists.

**Recommended Response Action** No response action is required.

**Category** Configuration (NVFA = Fabric)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

### NVFA0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to configure the fabric because the Fabric Node arg1 does not exist.

**Arguments**

- arg1 = node ID

**Detailed Description** The fabric cannot be configured because the fabric node identified in the message is not present.

**Recommended Response Action** Enter a valid fabric node and retry the operation again.

**Category** Configuration (NVFA = Fabric)

<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve fabric because the fabric does not exist.
<b>Detailed Description</b>	The fabric cannot be retrieved because the fabric does not exist.
<b>Recommended Response Action</b>	Enter a valid fabric and retry the operation.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure fabric with the given Node arg1 because the node is already part of another fabric arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = node ID</li> <li>• arg2 = fabric ID</li> </ul>
<b>Detailed Description</b>	The fabric cannot be configured because the node mentioned in the message is already part of another fabric.
<b>Recommended Response Action</b>	Create the fabric with a different node which is not part of any existing fabric and retry the operation.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure fabric design because the fabric design arg1 does not exist.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = fabric design</li> </ul>
<b>Detailed Description</b>	The fabric cannot be configured because the fabric design identified in the message does not exist.

<b>Recommended Response Action</b>	Enter a valid fabric design and retry the operation again.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to do configure fabric because the fabric node arg1, node type arg2 does not match with fabric design node arg3 design node type arg4.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = fabric node</li> <li>• arg2 = node type</li> <li>• arg3 = fabric design</li> <li>• arg4 = design node type</li> </ul>
<b>Detailed Description</b>	The fabric cannot be configured because the fabric node and fabric design node identified in the message does not match.
<b>Recommended Response Action</b>	Enter a valid fabric node, node type and retry the operation again.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure fabric because the design node arg1 does not exist in fabric design.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = design node</li> </ul>
<b>Detailed Description</b>	The fabric cannot be configured because the design node does not exist in the fabric design identified in the message.
<b>Recommended Response Action</b>	Enter a valid design node and retry the operation again.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure fabric because the fabric design node count arg1 does not match with fabric node count arg2.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = fabric nodes count</li><li>• arg2 = fabric node count</li></ul>
<b>Detailed Description</b>	The fabric cannot be configured because the fabric node count and fabric design node count identified in the message does not match.
<b>Recommended Response Action</b>	Enter valid nodes matching the fabric design and retry the operation again.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Updating fabric design map on an existing fabric is not supported.
<b>Detailed Description</b>	Once fabric is created, the design map cannot be changed.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Updating the fabric design of an existing fabric is not supported.
<b>Detailed Description</b>	Once fabric is created, fabric design cannot be updated.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Updating the nodes of an existing fabric is not supported.
<b>Detailed Description</b>	Once the fabric is created, the nodes cannot be added/removed.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to assign the nodearg1 to a fabric because a Lifecycle operation is in progress on the node and the node state is arg2.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = node ID</li><li>• arg2 = current lifecycle state</li></ul>
<b>Detailed Description</b>	The node identified in the message cannot be assigned to a fabric because a Lifecycle operation is in progress on the node.
<b>Recommended Response Action</b>	Wait for the pending Lifecycle action to complete and retry the operation.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFA0013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to start the Fabric Lifecycle operation because a Lifecycle operation is already in progress on the Fabric.
<b>Detailed Description</b>	The Lifecycle operation cannot be started on the Fabric because a Lifecycle operation is already in progress on the Fabric.
<b>Recommended Response Action</b>	Wait for the pending Lifecycle operation to get completed and retry the operation.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVFA0014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to delete the fabric because a fabric upgrade operation is in progress on the selected fabric.

**Detailed Description** The fabric cannot be deleted because a fabric upgrade operation is in progress on the selected fabric.

**Recommended Response Action** Wait for the pending lifecycle operation on the fabric to be completed and retry the operation.

**Category** Configuration (NVFA = Fabric)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVFA0015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to apply the Fabric Lifecycle configuration because the lead I/O module arg1 lifecycle activity is in progress.

**Arguments**

- arg1 = lead servicetag

**Detailed Description** The Fabric Lifecycle operation cannot be applied because the lead I/O modules lifecycle activity is in progress.

**Recommended Response Action** Wait for the Lifecycle activity of the lead I/O module to complete and retry the operation.

**Category** Configuration (NVFA = Fabric)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVFA0016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to replace the switch because the Service Tag provided for the old or new switch is invalid, the old switch is still online, the new switch is offline, or the new switch is or was part of another fabric.

**Detailed Description** The switch cannot be replaced because the Service Tag provided for the old or new switch is invalid, the old switch is still online, the new switch is offline, or the new switch is or was part of another fabric.

**Recommended Response Action** Make sure of the following and retry the operation: 1)The Service Tag entered for the old and new switch is valid. 2) The old switch has physically been removed. 3) The new switch is online in full-switch mode and at the same version of OS10 as the other switch in the SmartFabric. 4) The new

switch was not part of another SmartFabric in the same Multi-Chassis Management group as the old switch.

<b>Category</b>	System Health (NVFA = Fabric)

# NVFH—Network Validation Fabric Health Event Messages

## NVFH0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The current leader node is not preferred and a node arg1 with preferred leader configuration is discovered.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = nodeName</li></ul>
<b>Detailed Description</b>	The current leader is not configured as the preferred leader.
<b>Recommended Response Action</b>	Check cluster members. It is suggested to keep the current node as leader. Else, switch-over to new preferred leader.
<b>Category</b>	Configuration (NVFH = Network Validation Fabric Health)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFH0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A node arg1 of more preferred platform type arg2 than the current leader is discovered.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = nodeName</li><li>• arg2 = platformType</li></ul>
<b>Detailed Description</b>	A node of more preferred platform type is discovered.
<b>Recommended Response Action</b>	It is suggested to configure the preferred leader with the preferred platform type.
<b>Category</b>	Configuration (NVFH = Network Validation Fabric Health)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFH0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A node of more preferred platform type arg1 than the current leader is discovered and preferred leader is not configured on it.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = platform Type</li></ul>
<b>Detailed Description</b>	A node of more preferred platform type is discovered but the preferred leader is not configured on it.
<b>Recommended Response Action</b>	It is suggested to configure the preferred leader if required.
<b>Category</b>	Configuration (NVFH = Network Validation Fabric Health)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVFH0017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The backup node does not have information about the leader node.
<b>Detailed Description</b>	The backup node does not have information about the leader node.
<b>Recommended Response Action</b>	To view information about the leader node, run the following command at the CLI: show smartfabric cluster.
<b>Category</b>	Configuration (NVFH = Network Validation Fabric Health)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NV FH0029

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The REST_USER Password must be immediately updated.
<b>Detailed Description</b>	The REST_USER Password must be immediately updated.
<b>Recommended Response Action</b>	Ensure that the password has at least nine characters, at least one upper case letter (A-Z), at least one lower case letter (a-z), at least one numeric character (0-9) and at least one special character (!, @, #, \$, %, ^, &, or *), and then retry the operation.
<b>Category</b>	Configuration (NVFH = Network Validation Fabric Health)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF—Interface Event Messages

### NVIF0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure Maximum Transmission Unit(MTU) because the configured MTU value is greater than the maximum value.
<b>Detailed Description</b>	The Maximum Transmission Unit (MTU) cannot be configured because the value exceeds the limit identified in the message.
<b>Recommended Response Action</b>	Configure a valid MTU less than or equal to the value identified in the message and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVIF0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the fanout on the interface because the interface fanout type is not HardwareDefault.
<b>Detailed Description</b>	Fanout from non-hardware default to non-hardware default is not allowed.
<b>Recommended Response Action</b>	Configure the interface to HardwareDefault and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVIF0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to configure the interface because the interface does not exist in the inventory.

**Detailed Description** The interface can not be configured because the interface does not exist in the inventory.

**Recommended Response Action** No response action required.

**Category** Configuration (NVIF = Interface)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVIF0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to configure autoneg because the interface does not support autoneg.

**Detailed Description** The autoneg cannot be configured on the interface because the autoneg capability is not supported for this interface.

**Recommended Response Action** No response action is required.

**Category** Configuration (NVIF = Interface)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVIF0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to configure the configured speed for the interface because the entered value is not supported.

**Detailed Description** The configured speed cannot be configured because the configured speed identified in the message is not supported.

**Recommended Response Action** Enter a valid configured speed and retry the operation.

**Category** Configuration (NVIF = Interface)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVIF0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Breakout property on the interface arg1 because the Breakout Capability validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the Breakout Capability validation has failed.
<b>Recommended Response Action</b>	Validate the Breakout Capability types for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Breakout property on the interface arg1 because the requested breakout type is not supported.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the interface does not support the requested breakout type.
<b>Recommended Response Action</b>	Validate the Breakout type for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Breakout property on the interface arg1 because the resource validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified on the message cannot be configured because the interface has associated configured resources.

<b>Recommended Response Action</b>	Unconfigure the resources for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Breakout property on the interface arg1 because the VLAN association validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Interface Name</li> </ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the interface member has associated vlan configuration.
<b>Recommended Response Action</b>	Unconfigure VLAN resources for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Breakout property on the interface arg1 because the interface is part of the uplink.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Interface Name</li> </ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the interface member has associated FIP-VLAN configuration.
<b>Recommended Response Action</b>	Unconfigure FIP-VLAN resources for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the breakout property on the interface arg1 because the breakout member is part of an uplink.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Interface Name</li> </ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the member interface is associated with an uplink.
<b>Recommended Response Action</b>	Remove the breakout member from the uplink and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the breakout property on the interface arg1 because the breakout member is part of another port channel.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Interface Name</li> </ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the member interface is associated with another port channel.
<b>Recommended Response Action</b>	Remove the breakout member from the port channel member and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Breakout property on the interface arg1 because the MX7116n Fabric Expander Module resource validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Interface Name</li> </ul>
<b>Detailed Description</b>	The Breakout property on the interface identified on the message cannot be configured because the interface has associated MX7116n Fabric Expander Module resources.
<b>Recommended Response Action</b>	Remove the cable between the MX7116n Fabric Expander Module and port group and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure Maximum Transmission Unit(MTU) on interface arg1 because the interface is of fibre channel (FC) type.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = interface Name</li></ul>
<b>Detailed Description</b>	The Maximum Transmission Unit (MTU) cannot be configured on the specified interface because it is of Fibre Channel interface type.
<b>Recommended Response Action</b>	Choose a different interface type and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to complete the configuration request on the arg1 interface because the interface is an ICL port.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = interface name</li></ul>
<b>Detailed Description</b>	The configuration request on the interface cannot be completed because the interface is an ICL port.
<b>Recommended Response Action</b>	Select another compatible interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure Forward Error Correction (FEC) because the I/O Module (IOM) is not in SmartFabric mode.
<b>Detailed Description</b>	Unable to configure Forward Error Correction (FEC) because the I/O Module (IOM) is not in SmartFabric mode.
<b>Recommended Response Action</b>	Make sure that the I/O Module (IOM) is in SmartFabric mode by creating a SmartFabric that includes this IOM and then retry the operation. FEC can only be configured by the GUI when the device is in SmartFabric mode. If the IOM is in Full Switch mode, use the CLI.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Warning

<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure Forward Error Correction (FEC) for interface arg1 because the validation failed.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = interface name</li> </ul>
<b>Detailed Description</b>	Forward Error Correction (FEC) cannot be configured because the validation failed.
<b>Recommended Response Action</b>	Select a Forward Error Correction (FEC) mode that is supported by the interface, and then retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0018

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to apply the configuration using the REST method because the switch is in Full Switch mode.
<b>Detailed Description</b>	The configuration cannot be applied because switch is in Full Switch mode.
<b>Recommended Response Action</b>	When the switch is in Full Switch mode, use the switch Command Line Interface (CLI) for configuring the port(s).
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVIF0019

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the selected port description attribute because the port description configuration is not supported on the port group.
<b>Detailed Description</b>	The selected port description attribute cannot be configured because the port description configuration is not supported on the port group.
<b>Recommended Response Action</b>	Select a different and compatible interface type and retry the operation. For information about compatible port descriptions on a port group, see the OpenManage Enterprise-Modular Users Guide available on the support site.
<b>Category</b>	Configuration (NVIF = Interface)

<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable

## NVNE—Network Event Messages

### NVNE0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the network ID is not entered in the request.
<b>Detailed Description</b>	The request cannot be processed because the network ID is not entered in the request.
<b>Recommended Response Action</b>	Enter a valid network ID and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVNE0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create the network because the network already exists.
<b>Detailed Description</b>	The network identified in the message cannot be created because the network already exists.
<b>Recommended Response Action</b>	Enter a different network name and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVNE0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve network because the network does not exist.
<b>Detailed Description</b>	The network cannot be retrieved because the network identified in the message does not exist.
<b>Recommended Response Action</b>	Enter a valid network name and retry the operation again.
<b>Category</b>	Configuration (NVNE = Network)

<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure VLAN because the VLAN minimum and/or VLAN maximum values configured on the Network are not valid.
<b>Detailed Description</b>	The network cannot be created because the VLAN minimum and/or VLAN maximum values configured on the Network are not valid.
<b>Recommended Response Action</b>	Enter a valid VLAN minimum and VLAN maximum value and retry the operation again.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure a network because the VLAN range configured is overlapping with an already defined network.
<b>Detailed Description</b>	The network cannot be created because the VLAN range configured is overlapping with an already defined network.
<b>Recommended Response Action</b>	Enter another set of VLAN maximum and VLAN minimum values and retry the operation again.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the network properties because a valid network type is not entered in the request.
<b>Detailed Description</b>	The network properties cannot be created or updated because a valid network type is not entered in the request.

<b>Recommended Response Action</b>	Enter a valid network type and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the network because editing the network type is not permitted on the current network.
<b>Detailed Description</b>	The network properties cannot be updated because editing the network type is not permitted on the current network.
<b>Recommended Response Action</b>	Delete the current network and create a new network by using the necessary network type.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the network profile because the VLAN range is limited to arg1 in one network profile.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = VLAN Number</li> </ul>
<b>Detailed Description</b>	The network cannot be created or updated because the user can only configure VLANs up to a maximum number identified in the message in one network profile.
<b>Recommended Response Action</b>	Enter a valid VLAN range within the maximum range identified in the message and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the network profile because of a mismatched network type configured on the server interface.
<b>Detailed Description</b>	The network profile cannot be created or updated because of a mismatched network type configured on the server interface.
<b>Recommended Response Action</b>	Remove the conflicting network configuration on the server interface, and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the network profile because the VLAN configuration is not allowed on the L3 Routed (Layer3) type of networks.
<b>Detailed Description</b>	The network profile cannot be created or updated because the VLAN configuration is not allowed on L3 Routed (Layer3) type of networks.
<b>Recommended Response Action</b>	Remove the VLAN configuration and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the network profile because the Layer3 Routed network is configured as tagged network on the server interface.
<b>Detailed Description</b>	The network profile cannot be created or updated because the Layer3 Routed network is configured as a tagged network on the server interface.
<b>Recommended Response Action</b>	Remove the Layer3 Routed type of network from the tagged network list on the server interface and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the network profile because the updating the virtual network attributes is not permitted.
<b>Detailed Description</b>	The network profile cannot be updated because the updating the virtual network attributes is not permitted.
<b>Recommended Response Action</b>	If the virtual network in a network profile requires an update then delete and recreate the network profile.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update a network profile because the lpv6 is configured on the network profile.
<b>Detailed Description</b>	The network profile cannot be created or updated because the lpv6 is configured on the network profile.
<b>Recommended Response Action</b>	Remove the lpv6 configuration on the network profile and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the network profile because VLAN ID is same as the Virtual Network VLT VLAN ID.
<b>Detailed Description</b>	The network profile cannot be updated because VLAN ID is same as the Virtual Network VLT VLAN ID.
<b>Recommended Response Action</b>	Select a different VLAN ID for the network profile and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the network profile because the virtual network name is not entered.
<b>Detailed Description</b>	The network profile cannot be created or updated because the virtual network name is not entered.
<b>Recommended Response Action</b>	Enter a valid virtual network profile name and then retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to delete the network profile because this is a Management or Control Network profile.
<b>Detailed Description</b>	The network profile cannot be deleted because this is a Management or Control Network profile.
<b>Recommended Response Action</b>	Make sure that the network profile is not of Management or Control Network profile and then retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0018

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the network profile because a reserved VLAN ID (4000-4094) is configured for the network.
<b>Detailed Description</b>	The network profile cannot be created or updated because a reserved VLAN ID (4000-4094) is configured for the network.
<b>Recommended Response Action</b>	Enter a valid VLAN ID and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0019

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the network profile arg1 because IP addresses are not configured.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = network ID</li></ul>
<b>Detailed Description</b>	The network profile mentioned in the message cannot be created or updated because IP addresses are not configured.
<b>Recommended Response Action</b>	Create or update the network profile with valid IP addresses and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE0020

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to either create or update the network profile because a reserved VLAN ID (4004, 4020) is configured for the network.
<b>Detailed Description</b>	The network profile cannot be either created or updated because a reserved VLAN ID (4004, 4020) is configured for the network.
<b>Recommended Response Action</b>	Enter a valid VLAN ID(except 4004 and 4020) and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve the virtual network data because the virtual network does not exist.
<b>Detailed Description</b>	The virtual network data cannot be retrieved because the virtual network does not exist.
<b>Recommended Response Action</b>	Enter a valid virtual network name and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the virtual network profile because an invalid Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) is configured.
<b>Detailed Description</b>	The virtual network profile cannot be created or updated because an invalid Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) is configured.
<b>Recommended Response Action</b>	Modify the Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) configuration on the virtual network profile and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the virtual network profile because updating the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) attribute is not permitted.
<b>Detailed Description</b>	The virtual network profile cannot be updated because updating the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) attribute is not permitted.
<b>Recommended Response Action</b>	If the virtual network requires an update then delete and recreate the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI).
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the virtual network profile because updating the Virtual Link Trunking (VLT) Virtual LAN (VLAN) ID attribute is not permitted.
<b>Detailed Description</b>	The virtual network profile cannot be updated because updating the Virtual Link Trunking (VLT) Virtual LAN (VLAN) ID attribute is not permitted.
<b>Recommended Response Action</b>	If the Virtual Link Trunking (VLT) Virtual LAN (VLAN) virtual network requires an update then delete and recreate the virtual network.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVNE1005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to create or update the network profile because the virtual network name is not entered in the request.

**Detailed Description** The network profile cannot be created or updated because the virtual network name is not entered in the request.

**Recommended Response Action** Enter a valid virtual network name and retry the operation.

**Category** Configuration (NVNE = Network)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVNE1006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to retrieve the virtual network because the virtual network does not exist.

**Detailed Description** The virtual network cannot be retrieved because the virtual network does not exist.

**Recommended Response Action** Enter a valid virtual network name and retry the operation again.

**Category** Configuration (NVNE = Network)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVNE1007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to create the virtual network because the virtual network already exists.

**Detailed Description** The virtual network cannot be created because the virtual network already exists.

**Recommended Response Action** Enter a different virtual network name and retry the operation.

**Category** Configuration (NVNE = Network)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVNE1008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the virtual network because changing the virtual network type is not permitted on the current virtual network.
<b>Detailed Description</b>	The virtual network properties cannot be updated because changing the virtual network type is not permitted on the current virtual network.
<b>Recommended Response Action</b>	Delete the current virtual network and create a new virtual network by using the necessary virtual network type.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the virtual network properties because a valid virtual network type is not entered in the request.
<b>Detailed Description</b>	The virtual network cannot be created or updated because a valid virtual network type is not entered in the request.
<b>Recommended Response Action</b>	Enter a valid virtual network type and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the virtual network because the VLT VLAN value configured on the virtual network is not valid.
<b>Detailed Description</b>	The virtual network cannot be created or updated because the VLT VLAN value configured on the virtual network is not valid.
<b>Recommended Response Action</b>	Enter a valid VLT VLAN value and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)

<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the virtual network profile because the Ipv6 is configured on the virtual network profile.
<b>Detailed Description</b>	The virtual network profile cannot be created or updated because the Ipv6 is configured on the virtual network profile.
<b>Recommended Response Action</b>	Remove Ipv6 configuration on the virtual network profile and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the virtual network profile because the VLT VLAN ID selected is same as the L3 network VLAN ID.
<b>Detailed Description</b>	The virtual network profile cannot be updated because VLT VLAN ID selected is same as the L3 network VLAN ID.
<b>Recommended Response Action</b>	Select a different VLT VLAN ID for the virtual network and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to perform this operation because Storage FCoE type of network is not supported on fabric interface.
<b>Detailed Description</b>	This operation cannot be applied on this interface because Storage FCoE type of Network is not supported on fabric interface.

<b>Recommended Response Action</b>	Specify a network that has supported network type.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to delete the virtual network profile because this is an automatically created virtual network profile.
<b>Detailed Description</b>	The virtual network profile cannot be deleted because this is an automatically created virtual network profile. Automatically created network profiles cannot be deleted.
<b>Recommended Response Action</b>	Make sure that the network profile is not automatically created, and then retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to delete the virtual network profile because this is either a Management or Control virtual network profile.
<b>Detailed Description</b>	The virtual network profile cannot be deleted because this is either a Management or Control virtual network profile.
<b>Recommended Response Action</b>	The virtual network profile cannot be deleted because this is either a Management or Control virtual network profile.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the virtual network profile because the configured VLT VLAN ID is used by another virtual network.
----------------	---

<b>Detailed Description</b>	The virtual network profile cannot be created or updated because the configured VLT VLAN ID is used by another virtual network.
<b>Recommended Response Action</b>	Make sure that a different VLT VLAN ID is selected, and then retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the virtual network profile because the configured Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) is used by another virtual network.
<b>Detailed Description</b>	The virtual network profile cannot be created or updated because the configured Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) is used by another virtual network.
<b>Recommended Response Action</b>	Enter a different Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1018

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the virtual network profile arg1 because IP addresses are not configured.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = network ID</li> </ul>
<b>Detailed Description</b>	The virtual network profile mentioned in the message cannot be created or updated because IP addresses are not configured.
<b>Recommended Response Action</b>	Create or update the virtual network profile with IP addresses and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNE1019

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to delete the Storage FCoE network because it is a part of Uplink.
<b>Detailed Description</b>	The Storage FCoE network cannot be deleted because it is a part of Uplink.
<b>Recommended Response Action</b>	Delete the Uplink and retry the operation. OpenManage Enterprise Modular > Fabric > Uplinks > Select Uplink and Delete.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNO—Node Event Messages

### NVNO0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve the I/O Module because the I/O Module does not exist.
<b>Detailed Description</b>	The I/O Module can not be retrieved because the I/O Module does not exist in the inventory.
<b>Recommended Response Action</b>	Enter a valid I/O Module value and retry the operation.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVNO0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to start the I/O Module Lifecycle operation because a Lifecycle operation is already in progress on the I/O Module.
<b>Detailed Description</b>	The Lifecycle operation cannot be started on the I/O Module because a Lifecycle operation is already in progress on the I/O Module.
<b>Recommended Response Action</b>	Wait for the pending Lifecycle operation to completed and retry the operation.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVNO0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to start the lifecycle operation on the I/O Module because the I/O Module is offline.
<b>Detailed Description</b>	The lifecycle operation cannot be started on the I/O Module because the I/O Module is offline.
<b>Recommended Response Action</b>	Wait for the I/O Module to come back online and retry the operation.

<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNO0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to perform upgrade operation because the I/O Module is part of a SmartFabric.
<b>Detailed Description</b>	The upgrade operation on a I/O Module that is part of a SmartFabric is not permitted.
<b>Recommended Response Action</b>	Perform fabric upgrade to upgrade the I/O Modules or delete the SmartFabric and retry the operation again.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNO0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to apply the configuration because the I/O Module is not in fabric mode.
<b>Detailed Description</b>	The configuration cannot be applied because the I/O Module is not in the fabric mode.
<b>Recommended Response Action</b>	Make sure that the I/O Module belongs to a fabric mode by creating a fabric between the I/O Modules and retry the operation.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVNO0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to apply the Node Lifecycle configuration because the lead I/O module arg1 Lifecycle activity is in progress.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = lead ServiceTag</li> </ul>
<b>Detailed Description</b>	The Node Lifecycle configuration cannot be applied because the lead I/O Modules lifecycle activity is in progress.
<b>Recommended Response Action</b>	Wait for the Lifecycle activity of lead I/O module to complete and retry the operation.

<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE—REST Event Messages

### NVRE0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the Base Authentication Token is not present in the request.
<b>Detailed Description</b>	The request failed because the Base Authentication token is not present in the request header.
<b>Recommended Response Action</b>	Enter a Base Authentication Token in the request header and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVRE0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the Authorization Token is not of Basic type.
<b>Detailed Description</b>	The request can not be processed because the Authorization Token entered is not of Basic type.
<b>Recommended Response Action</b>	Change the Authorization token type to Basic Authentication and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVRE0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the authorization failed.
<b>Detailed Description</b>	The request can not be processed because the username and password provided in the authorization token is not valid.

<b>Recommended Response Action</b>	Provide a valid user name and password and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the provided URL is not valid.
<b>Detailed Description</b>	The request can not be processed because the given URL is not valid.
<b>Recommended Response Action</b>	Enter a valid URL and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the provided image stream is not valid.
<b>Detailed Description</b>	The request can not be processed because the given image stream is not a valid firmware image.
<b>Recommended Response Action</b>	Provide a valid image stream and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the input JSON payload is invalid. Error information: arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = details</li> </ul>
<b>Detailed Description</b>	The request failed because the payload provided is not of valid JSON format.
<b>Recommended Response Action</b>	Enter a valid JSON payload and retry the operation again.

<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the VLAN ID entered is not an integer.
<b>Detailed Description</b>	The request can not be processed because the entered VLAN ID is not an integer.
<b>Recommended Response Action</b>	Enter a valid integer for VLAN ID in the payload and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the URL is not valid.
<b>Detailed Description</b>	The request can not be processed because the entered odata URL does not have correct parenthesis.
<b>Recommended Response Action</b>	Enter a valid odata URL, check the correctness of parenthesis and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the URL is not valid.
<b>Detailed Description</b>	The request can not be processed because the URL is not valid and the ID provided in the URL is not correct.
<b>Recommended Response Action</b>	Enter a valid URL, check for correctness of odata ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical

<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the integer value in the request URL for the key arg1 is invalid.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = parameter key</li> </ul>
<b>Detailed Description</b>	The request can not be processed because the value provided for the key is not an integer.
<b>Recommended Response Action</b>	Enter a valid integer value for the key and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the validation error does not exist.
<b>Detailed Description</b>	The request can not be processed because the given validation error ID is not present.
<b>Recommended Response Action</b>	Enter a valid validation error ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the fabric validation error does not exist.
<b>Detailed Description</b>	The request can not be processed because the given fabric validation error id is not present.
<b>Recommended Response Action</b>	Enter a valid fabric validation error id and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVRE0013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to process the request because the link does not exist.

**Detailed Description** The request can not be processed because the given link ID is not present.

**Recommended Response Action** Enter a valid link ID and retry the operation.

**Category** Configuration (NVRE = REST)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVRE0014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to process the request because the given HTTP method arg1 is not allowed for the given URL.

**Arguments**

- arg1 = method name

**Detailed Description** The request can not be processed because the given HTTP method is not allowed for the given URL.

**Recommended Response Action** Provide a valid HTTP method and retry the operation.

**Category** Configuration (NVRE = REST)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVRE0015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Unable to process the request because the fabric design does not exist.

**Detailed Description** The request can not be processed because the given fabric design ID is not present.

**Recommended Response Action** Enter a valid fabric design ID and retry the operation.

**Category** Configuration (NVRE = REST)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVRE0016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the discovered server does not exist.
<b>Detailed Description</b>	The request can not be processed because the given discovered server ID is not present.
<b>Recommended Response Action</b>	Enter a valid discovered server ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the discovered server interface does not exist.
<b>Detailed Description</b>	The request can not be processed because the given discovered server interface ID is not present.
<b>Recommended Response Action</b>	Enter a valid discovered server interface ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0018

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the server interface bond does not exist.
<b>Detailed Description</b>	The request can not be processed because the given server interface bond id is not present.
<b>Recommended Response Action</b>	Enter a valid server interface bond id and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0019

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the VLAN does not exist.
<b>Detailed Description</b>	The request can not be processed because the given VLAN ID is not present.
<b>Recommended Response Action</b>	Enter a valid VLAN ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0020

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to save the image file because necessary disk space is unavailable.
<b>Detailed Description</b>	The image file cannot be processed because necessary disk space is unavailable.
<b>Recommended Response Action</b>	Delete the current image file from /var/os10-image location and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0021

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the user arg1 does not have the privilege to change the password.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = user name</li></ul>
<b>Detailed Description</b>	The password cannot be changed because the user identified in the message does not have the privilege to change the password.
<b>Recommended Response Action</b>	Enter a valid REST user name which has the privilege to change the password and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0022

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the service is not ready yet.
<b>Detailed Description</b>	The request can not be processed because the module to handle the request is not ready yet.
<b>Recommended Response Action</b>	Retry the operation after some time. If the issue persists, contact the administrator.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0023

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to start the lifecycle operation on the I/O Module because the I/O Module arg1 is offline.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = node Id</li></ul>
<b>Detailed Description</b>	The lifecycle operation on the I/O Module cannot be started because the I/O Module identified in the message is offline.
<b>Recommended Response Action</b>	Wait for the I/O Module to be available online and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0024

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the fabric because the I/O Module arg1 is offline.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = node Id</li></ul>
<b>Detailed Description</b>	The fabric cannot be created or updated because the I/O Module identified in the message is offline.
<b>Recommended Response Action</b>	Wait for the I/O Module to be available online and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0025

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the fabric because the REST operation is not supported for L3 fabric personality.
<b>Detailed Description</b>	The fabric cannot be created or updated because the REST operation is not supported for L3 fabric personality.
<b>Recommended Response Action</b>	Do not use REST API to create or update the L3 fabric because L3 fabrics are automatically created when the L3 SmartFabric mode is enabled by using Command Line Interface (CLI).
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0026

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to perform REST create, update or delete operation because the REST configuration is locked.
<b>Detailed Description</b>	The request cannot be serviced now, because the configuration database is locked.
<b>Recommended Response Action</b>	Retry the operation after some time. If the issue persist, contact your OpenManage Enterprise-Modular administrator.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0100

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to service the request because of internal server error.
<b>Detailed Description</b>	The request could not be serviced due to internal server error.
<b>Recommended Response Action</b>	Retry the operation after some time. If the issue persists, contact the administrator.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0101

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because Authorization header is not present in the request.
<b>Detailed Description</b>	The request failed because there was no Authorization header in the request.
<b>Recommended Response Action</b>	Provide the authentication details in the Authorization header.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0102

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because authentication type mentioned in Authorization header is not valid.
<b>Detailed Description</b>	The request cannot be processed because of invalid authentication type in Authorization header.
<b>Recommended Response Action</b>	Provide a valid authentication type in the Authorization header. (Ex : Basic).
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0103

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because token authentication failed.
<b>Detailed Description</b>	The request can not be processed because the Bearer token provided in the Authorization header is not valid.
<b>Recommended Response Action</b>	Provide a valid Bearer token and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0104

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because token authentication is disabled.
<b>Detailed Description</b>	The request can not be processed because the Bearer token authentication has been disabled.
<b>Recommended Response Action</b>	Retry with Basic authentication type in the Authorization header.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE0106

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The current operation is completed. Enter the RSA passcode to successfully log in.
<b>Detailed Description</b>	Authentication requires second factor (RSA passcode) for completion.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve the route policy data because the route policy does not exist.
<b>Detailed Description</b>	The route policy data cannot be retrieved because the route policy does not exist.
<b>Recommended Response Action</b>	Enter a valid route policy id and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve the node policy mapping data because the node policy mapping does not exist.
<b>Detailed Description</b>	The node policy mapping data cannot be retrieved because the node policy mapping does not exist.
<b>Recommended Response Action</b>	Enter a valid node id and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create a route policy data because a route policy with similar name already exists.
<b>Detailed Description</b>	The route policy cannot be created because a route policy with a similar name already exists.
<b>Recommended Response Action</b>	Create a new route policy data with a unique policy ID, and then retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create a node policy because a node policy with similar name already exists.
<b>Detailed Description</b>	A node policy cannot be created because a policy with a similar name already exists.
<b>Recommended Response Action</b>	Delete the node policy mapping that has the Service tag of the node as the key, and then re-create a new policy by using a new set of policy IDs.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create the route policy because an invalid policy data is entered.
<b>Detailed Description</b>	The route policy cannot be created because an invalid policy data is entered.
<b>Recommended Response Action</b>	Create a new route policy by entering valid policy data, and then create the route policy.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to delete the route policy because the route policy is already mapped and the nodes are currently using the policies.
<b>Detailed Description</b>	The route policy cannot be deleted because it is already mapped and the nodes are currently using the policies.
<b>Recommended Response Action</b>	Delete the node policy mapping for the nodes and then delete the route policy.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the route policy data because editing the Policy ID is not permitted.
<b>Detailed Description</b>	The route policy property cannot be updated because editing the Policy ID is not permitted.
<b>Recommended Response Action</b>	Delete the current policy and create a new policy by using the necessary Policy ID.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the password because it does not meet the required security criteria.
<b>Detailed Description</b>	The password does not meet the security requirements, including length, uppercase letters, lowercase letters, numeric characters and special characters.
<b>Recommended Response Action</b>	Ensure that the password has at least nine characters, at least one upper case letter (A-Z), at least one upper case letter (a-z), at least one numeric character (0-9) and at least one special character (!, @, #, \$, %, ^, &, or *), and then retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1101

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve workflow data because the specified workflow ID does not exist.
<b>Detailed Description</b>	The workflow data cannot be retrieved because the workflow does not exist.
<b>Recommended Response Action</b>	Enter a valid workflow ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1102

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to process the request because the workflow sub-component(s) specified in the payload does not exist. Error information: %1.
<b>Detailed Description</b>	The request could not be processed because the workflow sub-component(s) specified in the payload does not exist.
<b>Recommended Response Action</b>	Enter the appropriate workflow components and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVRE1103

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the details of workflow components because the specified Workflow ID does not exist.
<b>Detailed Description</b>	The Workflow components cannot be updated because the Workflow ID does not exist.
<b>Recommended Response Action</b>	Enter a valid workflow ID and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)

## NVSE0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create a server interface profile because the server interface profile already exists.
<b>Detailed Description</b>	The server interface profile cannot be created because the server interface profile already exists.
<b>Recommended Response Action</b>	Enter a new server interface profile name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or retrieve server profile because the server profile does not exist.
<b>Detailed Description</b>	The server profile cannot be created or retrieved because the server profile does not exist.
<b>Recommended Response Action</b>	Enter a valid server profile name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure or retrieve server interface profile because it does not exist.
<b>Detailed Description</b>	The server interface profile cannot be retrieved or configured because it does not exist.
<b>Recommended Response Action</b>	Enter a valid server interface profile name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure server interface profile because the FCoE bandwidth partition is not matching with the other server interface profiles on this server profile.
<b>Detailed Description</b>	The server interface profile cannot be created because the FCoE bandwidth partition is not matching with the other server interface profiles on this server profile.
<b>Recommended Response Action</b>	Enter a valid FCoE bandwidth partition and retry the operation again.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure server interface profile because the native VLAN value configured on the server interface profile is invalid.
<b>Detailed Description</b>	The server interface profile cannot be created because the native VLAN value configured on the server interface profile is invalid.
<b>Recommended Response Action</b>	Enter a valid native VLAN and retry the operation again.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Server Interface Profile because the Percentage Bandwidth value entered for configuring the Server Interface Profile is invalid.
<b>Detailed Description</b>	The Server Interface Profile cannot be configured because the Percentage Bandwidth value entered for configuring the Server Interface Profile is invalid.
<b>Recommended Response Action</b>	Enter a valid Percentage Bandwidth value and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the Server Interface Profile because a Storage FCoE type of Network and a Native VLAN is configured on this Server Interface Profile.
<b>Detailed Description</b>	The Server Interface Profile cannot be created or updated because a Storage FCoE type of Network and Native VLAN are both configured on this Server Interface Profile.
<b>Recommended Response Action</b>	Remove the Native VLAN configuration from the Server Interface Profile and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the server interface profile because of a mismatched network type configured on the server interface.
<b>Detailed Description</b>	The server interface profile cannot be created or updated because of a mismatched network type configured on the server interface.
<b>Recommended Response Action</b>	Remove the conflicting network configuration on the server interface, and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

**Applicable Event or Alert Types** No alerts are applicable for this message

## NVSE0012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the server interface profile because there is a Layer3 Routed network configured (as tagged network) on the server interface.
<b>Detailed Description</b>	The server interface profile cannot be created because there is a Layer3 Routed network configured (as tagged network) on the server interface.
<b>Recommended Response Action</b>	Remove the Layer3 Routed network from the tagged network list on the server interface and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the server interface profile because there are duplicate networks configured.
<b>Detailed Description</b>	The server interface profile cannot be created or updated because there are duplicate network configured.
<b>Recommended Response Action</b>	Remove the duplicate network configuration from the server interface and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the server interface profile because the network change from tagged network to untagged network or vice-versa is not allowed on the server interface.
<b>Detailed Description</b>	The server interface profile cannot be created or updated because the network change from tagged network to untagged network or vice verser is not allowed on the server interface.
<b>Recommended Response Action</b>	Delete the network configuration, and reconfigure the networks on the server interface to change from tagged to untagged, or from untagged to tagged.
<b>Category</b>	Configuration (NVSE = Server Interface)

<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the server interface profile because the static onboard interface is already used by another server interface profile.
<b>Detailed Description</b>	The server interface profile cannot be created or updated because the static onboard interface is already used by another server interface profile.
<b>Recommended Response Action</b>	Modify the server interface profile by using a static onboard interface which is not in use and then retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0025

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the server interface profile because either the untagged VLAN field is empty or the native VLAN (VLAN 1) is entered along with one of the FCoE-enabled networks in tagged Network.
<b>Detailed Description</b>	The server interface profile cannot be completed because either the untagged VLAN field is empty or the native VLAN (VLAN 1) is entered along with one of the FCoE-enabled networks in tagged Network.
<b>Recommended Response Action</b>	Do any one of the following and retry the operation: 1) Update the server interface profile by entering an untagged VLAN ID in the server port which is same as the FCoE uplink ports or 2) Remove the native VLAN (VLAN 1) from the tagged network and update the untagged VLAN as the native VLAN (VLAN 1).
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0026

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to either create or update the server template because the server type already exists.
----------------	---

<b>Detailed Description</b>	The server template cannot be either created or updated because because the server type already exists.
<b>Recommended Response Action</b>	Enter a unique server type and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0027

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to associate the network ID because the L3 routed network is associated with one of the Uplinks.
<b>Detailed Description</b>	The network ID cannot be associated to the Uplink profile because the L3 routed network is associated with one of the Uplinks.
<b>Recommended Response Action</b>	Delete the Uplink profile that is already associated with this L3 routed network and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0028

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to associate the network ID because the L3 routed network is associated with one of the server profiles.
<b>Detailed Description</b>	The network ID cannot associated because the L3 routed network is associated with one of the server profiles.
<b>Recommended Response Action</b>	Delete the server profile that is already associated with this L3 routed network and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0029

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve server template because it is not available in the template database.
<b>Detailed Description</b>	The server template cannot be retrieved because it is not available in the template database.
<b>Recommended Response Action</b>	Enter a valid server template name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0030

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure or update the server interface template because the server interface can accept only one FCoE VLAN network in a template.
<b>Detailed Description</b>	The server interface template cannot be configured or updated because the tagged networks must not have more than one FCoE VLAN network.
<b>Recommended Response Action</b>	Make sure that the server interface template has only one FCoE VLAN network and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0031

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to assign the selected server type because editing of this server type is not supported.
<b>Detailed Description</b>	The selected server type cannot be assigned because editing of this server type is not supported.
<b>Recommended Response Action</b>	Delete the current server template and create a new template by using the required server type.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSE0032

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create the server template because the server template name already exists.
----------------	---

<b>Detailed Description</b>	The server template cannot be created because the server template name already exists.
<b>Recommended Response Action</b>	Enter a unique server template name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVSU—Subscription Event Messages

### NVSU0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve the subscription, because the subscription does not exist.
<b>Detailed Description</b>	The subscription cannot be retrieved because the subscription identified in the message is not present.
<b>Recommended Response Action</b>	Enter a valid subscription and retry the operation.
<b>Category</b>	Configuration (NVSU = Subscription)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVSU0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the subscription because the subscription arg1 is not entered.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Attribute Id</li> </ul>
<b>Detailed Description</b>	The subscription cannot be configured because the subscription attribute is not entered.
<b>Recommended Response Action</b>	Enter a valid subscription attribute and retry the operation.
<b>Category</b>	Configuration (NVSU = Subscription)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVSU0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the subscription because the subscription arg1 is invalid.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Attribute Id</li> </ul>
<b>Detailed Description</b>	The subscription cannot be configured because the subscription attribute is invalid.
<b>Recommended Response Action</b>	Enter a valid subscription Attribute and retry the operation.
<b>Category</b>	Configuration (NVSU = Subscription)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVTG—Topology Graph Event Messages

### NVTG0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve the topology graph because the topology graph does not exist.
<b>Detailed Description</b>	The topology graph can not be retrieved because the topology graph does not exist.
<b>Recommended Response Action</b>	Enter a valid topology graph value and retry the operation.
<b>Category</b>	Configuration (NVTG = Topology Graph)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

### NVTG0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to retrieve the topology graph link because the topology graph link does not exist.
<b>Detailed Description</b>	The topology graph link can not be retrieved because the topology graph link does not exist.
<b>Recommended Response Action</b>	Enter a valid topology graph link value and retry the operation.
<b>Category</b>	Configuration (NVTG = Topology Graph)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

# NVTP—Topology Event Messages

## NVTP0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the topology because a different type of IOM is found in the slot pair.
<b>Detailed Description</b>	The topology validation failed because of a different type of IOM found in the slot pair in the chassis.
<b>Recommended Response Action</b>	Make sure that the IOMs of the same type occupy the same slot pair in a chassis.
<b>Category</b>	Configuration (NVTP = Topology)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVTP0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to validate the MX7116n Fabric Expander Module because the slot number of the MX7116n Fabric Expander Module and the slot number of the Network IOM are different.
<b>Detailed Description</b>	The MX7116n Fabric Expander Module validation failed because the MX7116n Fabric Expander Module slot number and the Network IOM slot number are different.
<b>Recommended Response Action</b>	Make sure that the slot number of the MX7116n Fabric Expander Module and the slot number of the Network IOM are the same like (A or B)[1]----(A or B)[1] and (A or B)[2]----(A or B)[2]. Mezz cards can be different either A or B but slot number should be same.
<b>Category</b>	Configuration (NVTP = Topology)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

# NVUP—Uplink Event Messages

## NVUP0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the uplink because the configuredinterface arg1 does not exist.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = interface name</li></ul>
<b>Detailed Description</b>	The uplink cannot be configured because the ConfiguredInterface identified in the message is not present.

<b>Recommended Response Action</b>	Enter a valid configuredinterface and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the ConfiguredInterface arg1 as an uplink because it is already being used.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = interface name</li> </ul>
<b>Detailed Description</b>	The configuredinterface mentioned in the message cannot be configured as uplink because it is already being used.
<b>Recommended Response Action</b>	Enter another configuredinterface and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the ConfiguredInterface arg1 as an uplink because it is not of Type Physical.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = interface-name</li> </ul>
<b>Detailed Description</b>	The configuredinterface mentioned in the message, cannot be configured as an uplink because it is not of Type Physical.
<b>Recommended Response Action</b>	Enter a configuredinterface of Type Physical and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to modify the configured interfaces for FC/FCoE/FCGateway uplink as they cannot be modified.
<b>Detailed Description</b>	The configured interfaces for FC/FCoE/FCGateway uplink cannot be modified or deleted.
<b>Recommended Response Action</b>	To modify the configured interfaces of uplink, please delete the uplink and create the uplink with desired interfaces.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure or update the Uplink because the Uplink configured with MediaType as Fiber Channel (FC) or Fiber Channel over Ethernet (FCoE) must have only one VLAN for the configured interfaces.
<b>Detailed Description</b>	The uplink cannot be configured or updated because the Uplink configured with MediaType as Fiber Channel (FC) or Fiber Channel over Ethernet (FCoE) must have only one VLAN for the configured interfaces.
<b>Recommended Response Action</b>	Make sure that the Uplink has only one VLAN for the configured interfaces.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure uplink because multiple Fiber Channel or storage uplinks are not supported.
<b>Detailed Description</b>	Uplink cannot be configured because only one Uplink of MediaType FiberChannel(FC) or FiberChannelOverEthernet(FCOE) and one uplink of MediaType iSCSI(storage uplink) is supported for the given Fabric.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the uplink because the uplink does not exist.
<b>Detailed Description</b>	The uplink cannot be retrieved because the uplink identified in the message does not exist.
<b>Recommended Response Action</b>	Enter a valid uplink and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure or update the uplink because the media type entered is not supported.
<b>Detailed Description</b>	The uplink cannot be configured because the media type entered is not supported.
<b>Recommended Response Action</b>	Enter an uplink with the supported media type and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the uplink because the FCoE Initiation Protocol(FIP) network is already used in this fabric.
<b>Detailed Description</b>	The Uplink cannot be configured because the FCoE Initiation Protocol (FIP) network is already used in this fabric. Two FC uplinks on the same fabric cannot have the same network.
<b>Recommended Response Action</b>	Enter an uplink with a different FIP network and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Uplink because a Layer3-routed network is configured (as a tagged network) on the uplink.
<b>Detailed Description</b>	The Uplink cannot be configured because a Layer3-routed network is configured (as a tagged network) on the uplink.
<b>Recommended Response Action</b>	Remove the Layer3-routed network from the tagged network list on the uplink, and then retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to update the Uplink because the Link Aggregation Group (LAG) type of the Uplink cannot be modified.
<b>Detailed Description</b>	The Uplink cannot be updated because the Link Aggregation Group (LAG) type of the Uplink cannot be modified.
<b>Recommended Response Action</b>	To modify the Link Aggregation Group (LAG) type, delete the Uplink, and then create a new Uplink by using the desired LAG type.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the Uplink because the Uplink ID arg1 already exists.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = uplink ID</li></ul>
<b>Detailed Description</b>	The Uplink cannot be configured because the Uplink ID identified in the message already exists.
<b>Recommended Response Action</b>	Enter a new Uplink ID and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or update the Uplink because the network arg1 is configured as of both tagged and untagged types.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = network ID</li></ul>
<b>Detailed Description</b>	The Uplink cannot be created or updated because the network identified in the message is configured as of both tagged and untagged types.
<b>Recommended Response Action</b>	Configure the network as either tagged or untagged, and then retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0014

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the uplink because the selected untagged VLAN ID arg1 is already in use on uplink arg2 in the SmartFabric.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = Vlan ID</li><li>• arg2 = uplink name</li></ul>
<b>Detailed Description</b>	The uplink cannot be configured because the selected untagged VLAN ID is already in use on an existing uplink in the SmartFabric.
<b>Recommended Response Action</b>	Configure the uplink with an untagged VLAN ID which is not already in use on other uplinks in the SmartFabric and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0015

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to configure the uplink because the selected tagged network arg1 is already in use on uplink arg2 in the SmartFabric.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = network name</li><li>• arg2 = uplink name</li></ul>
<b>Detailed Description</b>	The uplink cannot be configured because the selected tagged network is already in use on an existing uplink in the SmartFabric.
<b>Recommended Response Action</b>	Configure the uplink with a tagged network which is not already in use on other uplinks in the SmartFabric and retry the operation.

<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create Ethernet-No Spanning Tree uplink arg1 because Ethernet-No Spanning Tree and legacy Ethernet Uplinks cannot co-exist in the same SmartFabric.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Uplink name</li> </ul>
<b>Detailed Description</b>	The Uplink cannot be created because Ethernet-No Spanning Tree and legacy Ethernet Uplinks cannot co-exist in same SmartFabric.
<b>Recommended Response Action</b>	To create a Ethernet-No Spanning Tree Uplink, delete the existing legacy Ethernet Uplinks and retry the operation. For more information, see the PowerEdge MX SmartFabric Configuration and Troubleshooting Guide.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create Ethernet Uplink arg1 because Ethernet and Ethernet-No Spanning Tree Uplinks cannot co-exist in the same SmartFabric.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = Uplink name</li> </ul>
<b>Detailed Description</b>	The Uplink cannot be created because Ethernet-No Spanning Tree and legacy Ethernet Uplinks cannot co-exist in same SmartFabric.
<b>Recommended Response Action</b>	To create a Ethernet uplink, delete the existing Ethernet- No Spanning Tree Uplinks and retry the operation. For more information, see the PowerEdge MX SmartFabric Configuration and Troubleshooting Guide.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0018

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create the Ethernet-No Spanning Tree uplink arg1 because the switches in SmartFabric arg2 are running Rapid per VLAN Spanning Tree (Rapid PVST).
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = uplink name</li> <li>• arg2 = fabric name</li> </ul>
<b>Detailed Description</b>	The Ethernet-No Spanning Tree Uplink identified in the message cannot be created because the switches in the SmartFabric are running Rapid per VLAN Spanning Tree (Rapid PVST).
<b>Recommended Response Action</b>	Configure Rapid Spanning Tree Protocol (RSTP) as the mode of STP for SmartFabric switches, and then retry the operation. Run the following command at the Command Line Interface (CLI): "spanning-tree mode rstp". For more information, see the PowerEdge MX SmartFabric Configuration and Troubleshooting Guide.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0019

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create the Ethernet-No Spanning Tree Uplink because FCoE Uplinks in SmartFabric arg1 have the same untagged VLAN arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = fabric name</li> <li>• arg2 = VLAN ID</li> </ul>
<b>Detailed Description</b>	The Ethernet-No Spanning Tree Uplink cannot be created because the FCoE Uplinks in the SmartFabric must have different untagged VLAN. For more information, see the PowerEdge MX SmartFabric Configuration and Troubleshooting Guide.
<b>Recommended Response Action</b>	Configure a different untagged VLAN for each FCoE Uplink, and then retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0020

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or configure the Uplink because FCoE network arg1, is selected as the tagged network.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = network name</li> </ul>
<b>Detailed Description</b>	The Uplink cannot be created or configured because the FCoE network identified in the message is selected as the tagged network.
<b>Recommended Response Action</b>	To create or update an Ethernet or Ethernet-No Spanning Tree Uplink, select only non-FCoE networks as the tagged networks, and then retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)

<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## NVUP0021

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to create or configure the FCoE Uplink because more than one port are selected.
<b>Detailed Description</b>	The FCoE Uplink cannot be created as more than one port are selected.
<b>Recommended Response Action</b>	To create or update an FCoE Uplink , select only one port.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## OSD—OS Deployment Event Messages

### OSD062

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The process of installing an operating system or hypervisor is started and is in progress.
<b>Detailed Description</b>	The process of installing an operating system or hypervisor is started and is in progress.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

### OSD063

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The process of installing an operating system or hypervisor is successfully completed.
<b>Detailed Description</b>	The process of installing an operating system or hypervisor is successfully completed.

<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD064

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The process of installing an operating system or hypervisor is abruptly stopped either by the user or the installation infrastructure.
<b>Detailed Description</b>	The process of installing an operating system or hypervisor is abruptly stopped either by the user or the installation infrastructure.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD065

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Operating System/Hypervisor Installation did not complete successfully.
<b>Detailed Description</b>	The Operating System/Hypervisor installation did not complete successfully. The system may be unable to boot into the operating system/hypervisor because of the incomplete installation.
<b>Recommended Response Action</b>	Check the installation logs of operating system or hypervisor, resolve any issues identified, and then retry the operation. If the issue persists, contact your service provider.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD1

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The command was successful.
<b>Detailed Description</b>	The command was successful.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD10

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Installation not supported for the selected operating system.
<b>Detailed Description</b>	Installation for the selected operating system is not supported. Make sure that the correct operating system name was entered.
<b>Recommended Response Action</b>	Recheck the operating system name with the output of GetDriverPackInfo().
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD11

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Driver Pack does not have drivers for the selected operating system.
<b>Detailed Description</b>	Lifecycle Controller does not have any drivers for the selected operating system. The operating system installation uses the native drivers present on the operating system media.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable

<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD12

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Cannot create the USB device needed to copy drivers for the selected operating system.
<b>Detailed Description</b>	iDRAC was unable to create and expose the drivers as a USB device for the OS installation to proceed.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD13

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Cannot mount the USB device needed to copy drivers for the selected operating system.
<b>Detailed Description</b>	iDRAC was unable to mount the drivers as a USB device for the OS installation to proceed.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD14

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to expose the USB device that contains the operating system drivers to host system.
<b>Detailed Description</b>	iDRAC was unable to expose the drivers as a USB device for the OS installation to proceed.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and rerun the command.

<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD15

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Mount network share failed - incorrect username or password.
<b>Detailed Description</b>	Unable to mount the network share using the credentials specified in the command because either the username or password is incorrect.
<b>Recommended Response Action</b>	Rerun the command with the correct username and password.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD16

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Mount network share failed - incorrect IP address or share name.
<b>Detailed Description</b>	Unable to mount the network share using the parameters specified in the command because either the IP address or share name is incorrect.
<b>Recommended Response Action</b>	Rerun the command with the correct IP address and share name.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD17

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Exposing ISO image as internal device to the server failed.
<b>Detailed Description</b>	Unable to expose the ISO image as an internal CD device to the host system because the ISO file is no longer present, network errors are preventing access to the ISO file, or iDRAC may not be responsive.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD18

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to locate the ISO image on the network share point.
<b>Detailed Description</b>	Unable to find the ISO file specified in the network share. Make sure that the correct ISO file path was entered into the command and that all other user credentials are correct.
<b>Recommended Response Action</b>	Rerun the command with the correct ISO file path.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD19

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The fork() command for a child process to perform the task failed.
<b>Detailed Description</b>	Failed to execute fork() system call to perform the task in a child process. iDRAC may be unresponsive.
<b>Recommended Response Action</b>	Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD2

**i** **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The operation cannot be completed because of an internal error.
<b>Detailed Description</b>	Unable to complete the operation because of an internal error.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and run the command. To reset the iDRAC by using Graphical User Interface (GUI), click Maintenance > Diagnostics > Reset. To reset by using RACADM, run the command at the Command Line Interface (CLI): racadm racreset.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD20

**i** **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to get size or label from Driver Pack for selected operating system.
<b>Detailed Description</b>	Unable to get the size or label for selected operating system from the Driver Pack present in Lifecycle Controller. The driver pack may be corrupt.
<b>Recommended Response Action</b>	Update the Driver Pack using Lifecycle Controller GUI / Unified Server Configurator (USC) or DUP and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD21

**i** **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to boot to ISO image.
<b>Detailed Description</b>	Bootting to ISO has failed. Either BIOS was unable to boot to the ISO image or the provider did not get a response in 5 minutes from BIOS on successful boot to ISO image.
<b>Recommended Response Action</b>	1) Make sure that a POST error did not result in user interaction (Press F1 to continue or F2 to run BIOS setup). 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD22

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to detach ISO image from the host.
<b>Detailed Description</b>	Unable to detach ISO image from the host because either the image is already detached, or iDRAC may not be operating normally.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD23

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to continue with DetachISOImage - another command is in the process of exposing the ISO Image and booting to it.
<b>Detailed Description</b>	Cannot continue with DetachISOImage because another command is in the process of exposing the ISO image and booting to it.
<b>Recommended Response Action</b>	See the ConcreteJob status to make sure that the current running process is complete and then run DetachISOImage.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD24

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to continue with DetachDrivers - UnPackAndAttach is in progress.
<b>Detailed Description</b>	Unable to continue with DetachDrivers - UnPackAndAttach is in progress.

<b>Recommended Response Action</b>	Wait until UnpackAndAttach finishes and then run DetachDrivers. This can take more than 5 minutes.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD25

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to detach USB device containing operating system drivers.
<b>Detailed Description</b>	Detaching the USB device (that contains drivers for the operating system installation) from the host has failed. The device may be detached, or iDRAC may not be operating normally.
<b>Recommended Response Action</b>	Reset iDRAC to detach this device automatically.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD26

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to continue with BootToPXE - another command is running.
<b>Detailed Description</b>	Unable to continue with BootToPXE command because another process is using Lifecycle Controller.
<b>Recommended Response Action</b>	See ConcreteJob status to make sure that the running process is complete, and then run BootToPXE.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD27

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Copying drivers for selected operating system failed.
<b>Detailed Description</b>	Copying drivers for selected operating system failed. The Driver Pack may be unusable.
<b>Recommended Response Action</b>	Update the Driver Pack using Lifecycle Controller (LC)/Unified Server Configurator (USC) or Dell Update Package (DUP) and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD28

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Hash verification on the ISO image failed.
<b>Detailed Description</b>	Hash verification on the ISO image has failed. The hash value specified in the command is either incorrect or the ISO image has been changed.
<b>Recommended Response Action</b>	1) Verify that the hash value specified in the command is correct. 2) Make sure that the ISO has not been changed 3) Replace the ISO image on the share and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD29

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Driver Pack configuration file not found in Lifecycle Controller. The Driver Pack might be corrupt.
<b>Detailed Description</b>	Driver Pack configuration file not found in Lifecycle Controller. Driver Pack may be unusable.
<b>Recommended Response Action</b>	Update the Driver Pack using Lifecycle Controller (LC)/Unified Server Configurator (USC) or Dell Update Package (DUP) and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD3

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Lifecycle Controller is being used by another process.
<b>Detailed Description</b>	Lifecycle Controller is currently locked by another process. Make sure that the process completes before attempting to run another command.
<b>Recommended Response Action</b>	1) After two minutes, rerun the command. 2) Make sure that Lifecycle Controller GUI or Unified Server Configurator or DUP is not currently running on the server. 3) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD30

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Invalid value for ExposeDuration - must be 60 - 65535 seconds
<b>Detailed Description</b>	The value specified for ExposeDuration is out of range. It must be between 60 and 65535 seconds.
<b>Recommended Response Action</b>	Rerun the command with a ExposeDuration value between 60 and 65535 seconds.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD31

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Copying operating system drivers to network share failed
<b>Detailed Description</b>	Copying drivers for the selected operating system to network share failed. The share may be read-only or the Driver Pack present in Lifecycle Controller may be unusable.

<b>Recommended Response Action</b>	1) Make sure that the network share has write permission. 2) Update the Driver Pack using Lifecycle Controller or Unified Server Configurator or DUP and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD32

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to either fetch ISO info or complete the operation because the ISO image file is not attached.
<b>Detailed Description</b>	The operation cannot be completed because the ISO image file is not associated to the server.
<b>Recommended Response Action</b>	Ensure that a valid ISO image file is properly associated with the server before retrying the operation. For detailed instructions on how to associate an ISO image with the server, please refer to the Redfish API Guide available on the support site.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD33

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Installed BIOS version does not support this method.
<b>Detailed Description</b>	The system has an older version of BIOS that does not support this method. Install the latest version of BIOS to use this method.
<b>Recommended Response Action</b>	Update the BIOS to version 1.2 or later and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD34

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to continue with BootToPXE - ISO image is attached to the system.
<b>Detailed Description</b>	Unable to continue with BootToPXE command because the system has an ISO image attached. Detach the ISO image before continuing with BootToPXE.
<b>Recommended Response Action</b>	Run the DetachISOImage command and then run BootToPXE.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSD35

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Lifecycle Controller is not enabled.
<b>Detailed Description</b>	Lifecycle Controller is disabled on the system, so none of the remote operating system deployment commands will work. Make sure Lifecycle Controller is enabled before running any command.
<b>Recommended Response Action</b>	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing on the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

## OSD80

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to boot to ISO image because of Secure Boot policy.
<b>Detailed Description</b>	Unable to boot to ISO image because of Secure Boot policy.
<b>Recommended Response Action</b>	If the Secure Boot feature is not desired, disable it in System Setup > System BIOS > Security Settings page. Otherwise, do the following: 1) review the Secure Boot Policy Summary in F2 System Setup > System BIOS > Security Settings page. The boot option must be authorized by a public key or hash value in the Authorized Signature Database. 2) If the boot option is not authorized but it can be trusted, enter System Setup > System BIOS > Security Settings page, set Secure Boot Policy to Custom, and add a entry for the boot option in the Authorized Signature Database (System Setup > System BIOS > Security Settings > Custom Policy Settings > Authorized Signature Database > Import Database Entry).
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

## OSE—OS Event Event Messages

### OSE0000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system stopped responding because of an exception during either loading or initializing the operating system.
<b>Detailed Description</b>	The system stopped responding because of an exception during either loading or initializing the operating system.
<b>Recommended Response Action</b>	View operating system logs and system video for additional information.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2411
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log

**Applicable Event or Alert Types** CMC—Not Applicable

## OSE0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** The system stopped responding because of an exception while running the operating system.

**Detailed Description** The system stopped responding because of an exception while running the operating system.

**Recommended Response Action** View operating system logs and system video for additional information.

**Category** System Health (OSE = OS Event)

**Severity** Informational

**Trap/EventID** 2411

**Redfish Event Type** Alert

**Applicable Event or Alert Types** iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing\*, LC Log\*, OS Log

**Applicable Event or Alert Types** CMC—Not Applicable

## OSE0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** An OS graceful stop occurred.

**Detailed Description** (IPMI sensor type 20h - offset 02h).

**Recommended Response Action** No response action is required.

**Category** System Health (OSE = OS Event)

**Severity** Informational

**Trap/EventID** 2411

**Redfish Event Type** Alert

**Applicable Event or Alert Types** iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing\*, LC Log\*, OS Log

**Applicable Event or Alert Types** CMC—Not Applicable

## OSE0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** An OS graceful shut-down occurred.

**Detailed Description** (IPMI sensor type 20h - offset 03h).

**Recommended Response Action** No response action is required.

<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2411
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A soft shut-down initiated by platform event filter.
<b>Detailed Description</b>	A separate exception or status condition shutdown the operating system. (IPMI sensor type 20h - offset 04h).
<b>Recommended Response Action</b>	Review system event log for platform events capable of shutting the system down.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Agent is not responding.
<b>Detailed Description</b>	Graceful shutdown request to an agent via the BMC did not occur due to a system hardware or software exception.
<b>Recommended Response Action</b>	Review operating system logs and system video for additional information.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A: boot completed.
<b>Detailed Description</b>	The system OS has successfully booted from A:.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Failed to boot from A.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Review system boot configuration and boot media. Verify the media in a: is bootable. See system video for additional information.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	C: boot completed.
<b>Detailed Description</b>	The system OS has successfully booted from C:.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

**Applicable Event or Alert Types** CMC—Not Applicable

## OSE1003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Failed to boot from C.

**Detailed Description** No detailed description available.

**Recommended Response Action** Review system boot configuration and boot media. Verify the media in C: is bootable. See system video for additional information.

**Category** System Health (OSE = OS Event)

**Severity** Critical

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## OSE1004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** PXE boot completed.

**Detailed Description** The system OS has successfully booted from the PXE server.

**Recommended Response Action** No response action is required.

**Category** System Health (OSE = OS Event)

**Severity** Informational

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## OSE1005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** PXE boot failed.

**Detailed Description** No detailed description available.

**Recommended Response Action** Review system boot configuration, local PXE configuration, and PXE server configuration.

**Category** System Health (OSE = OS Event)

**Severity** Critical

<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Diagnostic boot completed.
<b>Detailed Description</b>	The system has successfully booted to diagnostics.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Diagnostic boot failed.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Review system boot configuration and boot media. See system video for additional information.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	CD-ROM boot completed.
<b>Detailed Description</b>	The system OS has successfully booted from the CD-ROM.

<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1009

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Failed to boot from CD-ROM.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Review system boot configuration and boot media. Verify the media in the CDROM is bootable. See system video for additional information.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1010

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	ROM boot completed.
<b>Detailed Description</b>	The system has successfully booted to ROM.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1011

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Failed to boot from ROM.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Check system event logs for additional exception information. Power down the system and attempt to boot again.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1012

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Boot completed.
<b>Detailed Description</b>	The system has successfully booted.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## OSE1013

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Failed to boot.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Review system boot configuration and boot media. See system video for additional information.
<b>Category</b>	System Health (OSE = OS Event)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

# PCI—PCI Device Event Messages

## PCI1300

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A front panel diagnostic interrupt was detected.
<b>Detailed Description</b>	The front panel diagnostic was pressed, and the system may be halted as a result. The interrupt was user induced.
<b>Recommended Response Action</b>	Reset the system to continue operation.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1302

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A bus time-out was detected on a component at bus arg1 device arg2 function arg3.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = bus</li><li>• arg2 = device</li><li>• arg3 = func</li></ul>
<b>Detailed Description</b>	System performance may be degraded. The device has failed to respond to a transaction (source/target abort or completion timeout).
<b>Recommended Response Action</b>	Update component drivers and power cycle the system. If device is removable, re-install the device.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1304

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	An I/O channel check error was detected.
----------------	--

<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Update component drivers and power cycle the system. If device is removable, re-install the device.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>LCD Message</b>	I/O channel check error detected. Power cycle system.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1306

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A software error was detected on a component at bus arg1 device arg2 function arg3.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = bus</li> <li>• arg2 = device</li> <li>• arg3 = func</li> </ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Reboot the system and update the component drivers.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1308

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A PCI parity error was detected on a component at bus arg1 device arg2 function arg3.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = bus</li> <li>• arg2 = device</li> <li>• arg3 = func</li> </ul>
<b>Detailed Description</b>	System performance may be degraded, or system may fail to operate.
<b>Recommended Response Action</b>	Update component drivers and power cycle the system. If device is removable, re-install the device.
<b>Category</b>	System Health (PCI = PCI Device)

<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>LCD Message</b>	PCI parity error on bus <bus> device <device> function <func>. Power cycle system.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1310

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A PCI system error was detected on a component at bus arg1 device arg2 function arg3.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = bus</li> <li>• arg2 = device</li> <li>• arg3 = func</li> </ul>
<b>Detailed Description</b>	System performance may be degraded, or system may fail to operate.
<b>Recommended Response Action</b>	Update component drivers and power cycle the system. If device is removable, re-install the device.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>LCD Message</b>	PCI system error on bus <bus> device <device> function <func>. Power cycle system.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1312

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	An EISA fail-safe time-out was detected.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1314

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A bus correctable error was detected on a component at bus arg1 device arg2 function arg3.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = bus</li><li>• arg2 = device</li><li>• arg3 = func</li></ul>
<b>Detailed Description</b>	System performance may be degraded.
<b>Recommended Response Action</b>	Update component drivers and power cycle the system. If device is removable re-install the device at the next scheduled service time.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1316

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A bus uncorrectable error was detected on a component at bus arg1 device arg2 function arg3.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = bus</li><li>• arg2 = device</li><li>• arg3 = func</li></ul>
<b>Detailed Description</b>	System performance may be degraded, or system may fail to operate.
<b>Recommended Response Action</b>	Update component drivers and power cycle the system. If device is removable, re-install the device.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1318

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A fatal error was detected on a component at bus arg1 device arg2 function arg3.
----------------	--

<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = bus</li> <li>• arg2 = device</li> <li>• arg3 = func</li> </ul>
<b>Detailed Description</b>	System performance may be degraded, or system may fail to operate.
<b>Recommended Response Action</b>	Do one or all the steps below:1)Make sure the device, BIOS, and iDRAC are updated to the latest firmware.2) Update the device drivers.3)Reset iDRAC.4)Perform an AC power-cycle operation on the server by doing the following: a) Disconnect the power cords. b) Wait 30 seconds. c) connect the power cords.5) If possible, remove and reinstall the device.6) Make sure that the cables are properly routed and connected.7) Update the OS version for patches or hotfixes.8) If the issue persists, contact your service provider.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>LCD Message</b>	Fatal error on bus <bus> device <device> function <func>. Power cycle system.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI1319

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A high-severity issue is detected in the SSD bay arg1, Slot arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = bay</li> <li>• arg2 = number</li> </ul>
<b>Detailed Description</b>	A high-severity issue was detected in the SSD bay identified in the message.
<b>Recommended Response Action</b>	Remove and reinsert the component identified in the message, and then monitor the log for a re-occurrence of the issue. If the issue persists, and occurs during server startup, update the component firmware. If the issue persists and occurs during OS runtime, restart the server and update the OS drivers for the component identified in the message.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

## PCI3018

**NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	New PCI card(s) have been detected in the system. Fan speeds may have changed to add additional cooling to the cards.
<b>Detailed Description</b>	New PCI card(s) have been detected in the system that may require additional airflow. Fan speeds may have changed to add additional cooling to the cards.
<b>Recommended Response Action</b>	Changing default fan response to PCIe cards should be done with appropriate understanding of the PCIe cooling needs of the cards present in the system. If the automatic cooling response is insufficient, additional cooling can be added by one of the following methods. 1) From iDRAC Web GUI, click Hardware -> Fans -> Setup, then from the fan speed offset drop-down list appropriately select the cooling level needed or set the minimum fan speed to a custom value. 2) From F2 System Setup, select iDRAC Settings -> Thermal, and set a higher fan speed from the fan speed offset or minimum fan speed. 3) For RACADM commands run "racadm help system.thermalsettings". If a lower fan speed is required, contact your service provider for the appropriate IPMI commands to reduce the default fan speed response for new PCIe cards.
<b>Category</b>	System Health (PCI = PCI Device)

## PCI3030

**NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	New PCI card(s) have been detected in the system. Fan speeds may have changed to add additional cooling to the cards.
<b>Detailed Description</b>	New PCI card(s) have been detected in the system that may require additional airflow. Fan speeds may have changed to add additional cooling to the cards.
<b>Recommended Response Action</b>	If the automatic cooling response is insufficient, additional cooling can be added by one of the following methods. 1) From iDRAC Web GUI, click Cooling -> Configure Fans -> PCIe Airflow Settings, then select Custom option for that PCIe slot and define desired LFM value. 2) For RACADM commands run "racadm help system.PcieSlotLFM". If automatic cooling response is above desired levels, this response can be turned off in most cases and/or a different LFM target can be set using PCIe Airflow Settings options in iDRAC GUI or Racadm. See iDRAC User Guide for more details by searching for "cooling" . Changing default fan response to PCIe cards should be done in alignment with vendor specification for PCIe cooling needs of the cards present in the system. Recommended actions may not be supported or available on all systems.

<b>Message</b>	A low-severity issue is detected in the SSD bay arg1, Slot arg2, and segment arg3.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = bay</li><li>• arg2 = number</li><li>• arg3 = seg</li></ul>
<b>Detailed Description</b>	A low-severity issue is detected in the SSD bay identified in the message.
<b>Recommended Response Action</b>	Remove and reinsert the component identified in the message, and then monitor the log for a re-occurrence of the issue. If the issue persists, and occurs during server startup, update the component firmware. If the issue persists and occurs during OS runtime, restart the server and update the OS drivers for the component identified in the message. If the issue persists, contact your service provider.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2418
<b>LCD Message</b>	An issue is detected in the SSD bay <bay>, Slot <number>, segment <seg>.
<b>Redfish Event Type</b>	Alert

<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PCI3039

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A high-severity issue is detected on a component in the slot arg1 segment arg2.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = number</li> <li>• arg2 = seg</li> </ul>
<b>Detailed Description</b>	A high-severity issue is detected on a component in the slot identified in the message.
<b>Recommended Response Action</b>	Do one or all of the following:1) Make sure the device, BIOS, and iDRAC are updated to the latest firmware.2) Update the device drivers.3) Reset iDRAC.4) Perform an AC power-cycle operation on the server by doing the following: a) Disconnect the power cords. b) Wait 30 seconds. c) Reconnect the power cords.5) If possible, remove and reinstall the device.6) Make sure that the cables are properly routed and connected.7) Update the OS version for patches or hotfixes.8) If the issue persists, contact your service provider.
<b>Category</b>	System Health (PCI = PCI Device)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2417
<b>LCD Message</b>	Bus fatal error on slot <number> segment <seg>. Reseat PCI card.

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Rebuild was aborted for drive arg1 in disk drive bay arg2.

**Arguments**

- arg1 = number
- arg2 = bay

**Detailed Description** No detailed description available.

**Recommended Response Action** No response action is required.

**Category** System Health (PDR = Physical Disk)

**Severity** Warning

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Not Applicable

## PDR101

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

**Message** Global Hot Spare arg1 does not cover all arrays.

**Arguments**

- arg1 = PD Name

**Detailed Description** This alert message occurs if there are arrays not protected with a global hot spare.

**Recommended Response Action** No response action is required.

**Category** Storage (PDR = Physical Disk)

**Severity** Warning

**Trap/EventID** 4346

**OMSA Event ID** 2209

**OMSA Trap ID** 90300

**Redfish Event Type** Not Applicable

**Applicable Event or Alert Types** iDRAC—Filter Visibility, Remote System Log, Redfish Eventing\*, LC Log\*

**Applicable Event or Alert Types** CMC—Filter Visibility, SNMP Alert\*, Email Alert\*, Remote System Log\*, LCD

## PDR1016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Drive arg1 is removed from disk drive bay arg2.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li><li>• arg2 = bay</li></ul>
<b>Detailed Description</b>	The controller detected that the drive was removed.
<b>Recommended Response Action</b>	Verify drive installation. Remove and reseal the failed drive. If the problem persists, contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PDR = Physical Disk)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2297
<b>LCD Message</b>	Drive <number> removed from disk drive bay <bay>. Check drive.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PDR1017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Drive arg1 in disk drive bay arg2 is operating normally.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li><li>• arg2 = bay</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.

## PDR106

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The physical disk drive arg1 is unassigned as a dedicated hot-spare.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = physical disk drive name</li></ul>
<b>Detailed Description</b>	A physical disk identified in the hot-spare that was assigned as a hot spare has been un-assigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically by the storage management software. When one of the disks in a virtual disk fails, data is rebuilt onto the hot spare. The hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. In this situation, assigning a new hot spare to maintain data protection is recommended.
<b>Recommended Response Action</b>	No response action is required. Assigning a new dedicated hot spare to the virtual disk is recommended.

## PDR16

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Predictive failure reported for arg1. Part Number = arg2
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = physical disk</li><li>• arg2 = Part Number</li></ul>
<b>Detailed Description</b>	The physical disk Self Monitoring Analysis and Reporting Technology (SMART) system has indicated a predictive failure condition as a result of one or more attributes exceeding reliability thresholds. This may be an indication of imminent disk failure. Even though the disk may not have failed yet, it is strongly recommended that the disk be replaced as soon as possible to avoid data loss or unavailability.
<b>Recommended Response Action</b>	Replace the physical disk. For a non-redundant VD, first perform a validated backup, then delete the VD, replace the disk, recreate the VD, and restore from the backup. For a redundant VD, force the disk offline. If a hot spare is configured, rebuild will begin. Otherwise, remove the disk and replace it with a new disk. If a rebuild does not start automatically, assign the new disk as a Global Hot Spare and the rebuild will start. Search "Predictive Failure" on support.dell.com for more information.

## PDR18

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Global hot spare unassigned from arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = PD Name</li> </ul>
<b>Detailed Description</b>	A physical disk assigned as a hot spare was unassigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically unassigned by Storage Management. Storage Management unassigns hot spares were used to rebuild data. Once the data is rebuilt onto the hot spare, the hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. Assign a new hot spare to maintain data protection in this situation.
<b>Recommended Response Action</b>	Although this alert is provided for informational purposes, you may need to assign a new hot spare to the virtual disk. See Protecting Your Virtual Disk with a Hot Spare for more information.

**Message** Unable to assign arg1 as a dedicated hot spare.

**Arguments**

- arg1 = physical disk name

<b>Detailed Description</b>	Unable to assign the physical disk as a dedicated hot spare because the selected disk size does not meet the size requirements of the target Virtual Disk.
<b>Recommended Response Action</b>	Select a physical disk that matches the size required for the disks used in the target Virtual Disk, and retry the operation.
<b>Category</b>	Storage (PDR = Physical Disk)
<b>Severity</b>	Informational
<b>OMSA Event ID</b>	2386

## PDR21

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	SMART warning for arg1. Part Number = arg2
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = PD Name</li> <li>• arg2 = Part Number</li> </ul>
<b>Detailed Description</b>	A disk has received a SMART alert (predictive failure). The disk is likely to fail in the near future.
<b>Recommended Response Action</b>	Replace the disk that has received the SMART alert. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk will cause the virtual disk to fail and may cause data loss.

## PDR210

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Successfully updated configuration data on the arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = physical disk name</li> </ul>
<b>Detailed Description</b>	This event is generated while initializing the drives during reboot. The controller updated the configuration data on the physical disks identified in the message. The drive configuration was updated because the following conditions were present: 1) The spindown drives were used for configuration. Spindown drives are drives that are temporarily powered off because power saving option is enabled. 2) The storage controller was not able to update the Configuration On Disk (COD) records on the drive while they were spindown.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Storage (PDR = Physical Disk)

<b>Message</b>	SMART warning temperature for arg1. Part Number = arg2
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = PD Name</li> <li>arg2 = Part Number</li> </ul>
<b>Detailed Description</b>	A disk has reached an unacceptable temperature and received a SMART alert (predictive failure). The disk is likely to fail in the near future.
<b>Recommended Response Action</b>	Do the following:1) Determine why the physical disk reached an unacceptable temperature. For example, a fan failure, incorrect thermostat settings, or the room temperature may be too hot or cold. 2) Verify that the fans in the server or enclosure are working. 3) If the physical disk is in an enclosure, check the thermostat settings and examine whether the enclosure is located near a heat source. Verify the enclosure has enough ventilation and that the room temperature is not too hot.

Refer to the enclosure documentation for more diagnostic information. 4) If you cannot identify why the disk has reached an unacceptable temperature, then replace the disk. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk causes the virtual disk to fail and may cause data loss.

<b>Message</b>	Dedicated hot spare unassigned from arg1.
<b>Arguments</b>	<ul style="list-style-type: none"><li>arg1 = PD Name</li></ul>
<b>Detailed Description</b>	A physical disk that was assigned as a hot spare has been unassigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically unassigned by Storage Management. Storage Management unassigns hot spares that have been used to rebuild data. Once data is rebuilt onto the hot spare, the hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. Assign a new hot spare to maintain data protection in this situation.
<b>Recommended Response Action</b>	Although this alert is provided for informational purposes, you may need to assign a new hot spare to the virtual disk. Refer to product documentation and see the section Protecting Your Virtual Disk with a Hot Spare for more information.

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The Physical Drive (PD) arg1 is not correctly functioning. Part number arg2.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = PD Name</li><li>• arg2 = partNumber</li></ul>
<b>Detailed Description</b>	The RAID Controller is unable to read-write data to the PD identified in the message because the PD is not functioning. The PD is either failed or removed from the server while communicating with the RAID controller.
<b>Recommended Response Action</b>	Do one of the following: 1) If the Physical Drive (PD) was removed at the time of event, this event is expected. Else, replace the PD.2) If it is a non-redundant Virtual Drive (VD), delete the VD, reinsert the PD, recreate the VD, and then restore the data from backup.3) If it is a redundant VD, the data rebuild operation will automatically start if a hot-spare is already configured. If it does not start, assign a PD as a global hot-spare so the rebuild operation is automatically started.

## PDR63

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A bad disk block on arg1 cannot be reassigned during a write operation.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = physical disk</li> </ul>
<b>Detailed Description</b>	The physical disk has failed to complete a write operation due to one or more bad blocks. Attempts to reassign the block have failed. Loss of data and redundancy may have occurred.
<b>Recommended Response Action</b>	Replace the physical disk. If VD is online, first perform a backup. For a non-redundant VD, delete the VD, replace the disk, recreate the VD, then restore data from a backup. For a redundant VD, force the disk offline. If a hot spare is configured, rebuild will begin. Otherwise, remove the disk and replace it with a new disk. If a rebuild does not start automatically, assign the new disk as a Global Hot Spare and the rebuild will start. Search "Troubleshooting RAID" on support.dell.com for more information.

<b>Message</b>	Security subsystem errors detected for arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = physical disk</li> </ul>
<b>Detailed Description</b>	Errors were detected with security related operations on the disk. The data on the disk might not be retrieved or stored successfully. In addition, the security of the stored data might be at risk.
<b>Recommended Response Action</b>	Verify the disk is a Secure Encrypted Disk and is not locked. If it is not, replace the disk with a Secure Encrypted Disk. See the storage hardware documentation for more information.
<b>Category</b>	Storage (PDR = Physical Disk)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	4345

## PFM—System Performance Event Event Messages

### PFM0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The value of arg1 is greater than the upper critical threshold.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = name</li> </ul>
<b>Detailed Description</b>	The utilization value of the sensor identified in the message is higher than the upper critical threshold.
<b>Recommended Response Action</b>	Check the work load of the server and reduce the workload if necessary to bring the system performance into required ranges. For more information about the specified values, see the relevant product documentation available at the support site.
<b>Category</b>	System Health (PFM = System Performance Event)
<b>Severity</b>	Critical
<b>LCD Message</b>	The value of <name> is greater than the upper critical threshold.
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

### PFM0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The value of arg1 is greater than the upper warning threshold.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = name</li> </ul>
<b>Detailed Description</b>	The utilization value of the sensor identified in the message is higher than the upper warning threshold.
<b>Recommended Response Action</b>	Check the work load of the server and reduce the workload if necessary to bring the system performance into required ranges. For more information about the specified values, see the relevant product documentation available at the support site.
<b>Category</b>	System Health (PFM = System Performance Event)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2650
<b>LCD Message</b>	The value of <name> is greater than the upper warning threshold.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log

**Applicable Event or Alert Types** CMC—Not Applicable

## PFM0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The value of arg1 is less than the lower warning threshold.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = name</li></ul>
<b>Detailed Description</b>	The utilization value of the sensor identified in the message is lower than the lower warning threshold value.
<b>Recommended Response Action</b>	The workload on server is almost zero. Consider assigning additional workloads to the server.
<b>Category</b>	System Health (PFM = System Performance Event)

# POW—Power Usage Event Messages

## POW000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power on permission error, chassis infrastructure not ready.
----------------	--

<b>Detailed Description</b>	Host failed to power up because chassis infrastructure is not ready. This messages has been replaced by Message ID PWR2250.
<b>Recommended Response Action</b>	Check status of chassis infrastructure.
<b>Category</b>	Audit (POW = Power Usage)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## POW001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power on permission error, chassis cover open.
<b>Detailed Description</b>	Host failed to power up because chassis cover is open. This messages has been replaced by Message ID PWR2251.
<b>Recommended Response Action</b>	Check chassis cover.
<b>Category</b>	Audit (POW = Power Usage)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## POW002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power on permission error, unknown component installed in Fabric1/Fabric2.
<b>Detailed Description</b>	Host failed to power up because unsupported components installed in Fabric1/fabric2.This messages has been replaced by Message ID PWR2252.
<b>Recommended Response Action</b>	Check for unsupported components installed in Fabric1/Fabric2.
<b>Category</b>	Audit (POW = Power Usage)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## POW003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power on permission error, no PCI/Mezz card installed in Fabric1/Fabric2.
<b>Detailed Description</b>	Host failed to power up because PCI/Mezz cards not installed in Fabric1/Fabric2. This messages has been replaced by Message ID PWR2253.
<b>Recommended Response Action</b>	Install PCI/Mezz card in Fabric1/Fabric2.
<b>Category</b>	Audit (POW = Power Usage)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## POW004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power on permission error, unacknowledged use of 110V.
<b>Detailed Description</b>	Host failed to power up because of unacknowledged use of 110V. This messages has been replaced by Message ID PWR2254.
<b>Recommended Response Action</b>	Check for unacknowledged use of 110V.
<b>Category</b>	Audit (POW = Power Usage)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## POW005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power on permission error, CMC is in MPCM mode.
<b>Detailed Description</b>	Host failed to power up because CMC MPCM mode is enabled. This messages has been replaced by Message ID PWR2255.
<b>Recommended Response Action</b>	Disable MPCM mode to power up.
<b>Category</b>	Audit (POW = Power Usage)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable

<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR—Part Replacement Event Messages

### PR1

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A replacement part was detected for device: arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = device name</li> </ul>
<b>Detailed Description</b>	The specified device has been replaced.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

### PR10

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Firmware update will not be performed. Firmware package is not present for arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = device name</li> </ul>
<b>Detailed Description</b>	The Part Replacement feature has detected a firmware difference and would apply firmware based on user settings for the system. However, the previous devices firmware update package is not present on the Lifecycle Controller.
<b>Recommended Response Action</b>	Use Unified Server Configurator or Dell update package to update device.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR11

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A required license for the Part Replacement feature is not present, replacement action(s) will not be performed.
<b>Detailed Description</b>	A valid license for this feature is not present.
<b>Recommended Response Action</b>	Obtain license to utilize functionality.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR12

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Firmware update setting allows version upgrade only and will not be performed.
<b>Detailed Description</b>	The Part Replacement feature has detected a firmware difference and would apply firmware. However, user settings indicate that Part Replacement should perform the upgrade only and not a downgrade to an earlier firmware version.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR13

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Firmware mismatch detected. Configuration changes not applied.
<b>Detailed Description</b>	The Part Replacement feature detected a firmware difference and cannot apply the configuration changes. After the device firmware is updated, configuration changes can be applied.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Informational

<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR14

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The configuration could not be applied to device: arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = device name</li> </ul>
<b>Detailed Description</b>	The device identified in the message could not apply the configuration settings. This may indicate configuration changes since the last system inventory.
<b>Recommended Response Action</b>	Check the current system configuration and retry the operation.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR15

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unable to verify configuration changes for device: arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = device name</li> </ul>
<b>Detailed Description</b>	The configuration changes requested have not passed the device specific verification check and will not be applied.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR16

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Some of the configuration values could not be applied to device: arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = device name</li> </ul>
<b>Detailed Description</b>	The device could not apply some of the configuration settings. This may indicate configuration changes since the last system inventory or mutually exclusive settings.
<b>Recommended Response Action</b>	Check the current system configuration and ensure all settings are correct. If not, retry the operation.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR17

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Some of the configuration values stored for the previous device could not be applied to device: arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = device name</li> </ul>
<b>Detailed Description</b>	Some of the configuration values stored for the previous device could not be applied to the current device. This may be due to firmware version or other differences in the part.
<b>Recommended Response Action</b>	Check the devices configuration and ensure that the new configuration is correct for the system.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Warning
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PR18

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Firmware version difference detected for device: arg1
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = device name</li> </ul>
<b>Detailed Description</b>	The Part Replacement feature has detected a firmware difference between the current and previous components. Depending on the Part Firmware Update setting value this may cause a firmware update to the replaced part.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (PR = Part Replacement)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable

<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*

<b>Trap/EventID</b>	2425
<b>LCD Message</b>	Remote access controller configuration failed. Check screen message

<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PST0195

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	CPU configuration failed.
<b>Detailed Description</b>	The current processor configuration is unsupported or encountered a fatal exception during POST. Check the processor configuration. This exception occurred early in system power on, thus the system may not display video. (BIOS POST exception code C3).
<b>Recommended Response Action</b>	Review system processor configuration and reduce the system to the minimum configuration.
<b>Category</b>	System Health (PST = BIOS POST)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2425
<b>LCD Message</b>	CPU configuration failed. Check screen message
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PST0196

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Incorrect memory configuration.
<b>Detailed Description</b>	System BIOS detected an invalid memory population. Reinstall the memory to match the supported population. This exception occurred early in system power on, thus the system may not display video. (BIOS POST Exception code C4).
<b>Recommended Response Action</b>	Re-install memory to match supported memory configuration.
<b>Category</b>	System Health (PST = BIOS POST)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2425
<b>LCD Message</b>	Incorrect memory configuration. Review User Guide
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PST0208

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	System BIOS has halted.
<b>Detailed Description</b>	System BIOS has halted and is unable to continue.
<b>Recommended Response Action</b>	Do one of the following: 1) If new hardware has been added, remove the new hardware and restart the server, 2) Turn server off and back on using the power button, or 3) Remove and reapply server input power. If the problem persists, contact your service provider. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PST = BIOS POST)
<b>Severity</b>	Critical
<b>LCD Message</b>	System BIOS has halted. Check console for details.
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PST0209

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	System BIOS has halted due to Non-Maskable Interrupt (NMI).
<b>Detailed Description</b>	System BIOS has halted and is unable to continue. System BIOS has detected a Non-Maskable Interrupt (NMI) which may have been caused by a hardware change.
<b>Recommended Response Action</b>	Do one of the following: 1) If new hardware has been added, remove the new hardware and restart the server, 2) Turn server off and back on using the power button, or 3) Remove and reapply server input power. If the problem persists, contact your service provider. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PST = BIOS POST)
<b>Severity</b>	Critical
<b>LCD Message</b>	System halted due to NMI: Check Console for Details
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PST0210

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A high-severity issue has occurred at the Power-On Self-Test (POST) phase which has resulted in the system BIOS to abruptly stop functioning.
<b>Detailed Description</b>	A high-severity issue has occurred at the Power-On Self-Test (POST) phase which has resulted in the system BIOS to abruptly stop functioning. BIOS is unable to report the issue on the POST screen.

<b>Recommended Response Action</b>	Power cycle the system. If the issue persists, collect the Trouble Shooting Report (TSR) and contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PST = BIOS POST)
<b>Severity</b>	Critical
<b>LCD Message</b>	The system BIOS abruptly stopped functioning because of a high-severity issue in POST.
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PST0254

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	General failure after video.
<b>Detailed Description</b>	System BIOS detected a functional or configuration issue during system POST. Check the system video screen for more information. The system event log may contain additional details. This exception occurred early in system power on, thus the system may not display video. (BIOS POST Exception code FE).
<b>Recommended Response Action</b>	Check system video and review event log for additional information.
<b>Category</b>	System Health (PST = BIOS POST)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2425
<b>LCD Message</b>	General failure after video. Check screen message
<b>Redfish Event Type</b>	Alert

# PSU—Power Supply Event Messages

## PSU0000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power supply arg1 is present.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2187
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power supply arg1 failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Remove and re-install the power supply. If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	PSU <number> failed. Check PSU
<b>OMSA Event ID</b>	5300
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	A predictive failure detected on power supply arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	System performance and power redundancy may be degraded or lost.
<b>Recommended Response Action</b>	Remove and re-install the power supply at the next service window. If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2186
<b>LCD Message</b>	Predictive failure on PSU <number>. Check PSU
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The Power Supply Unit (PSU) arg1 is not receiving input power because of issues in PSU or cable connections.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = PSU Number</li> </ul>
<b>Detailed Description</b>	The power supply is installed correctly but an input source is not connected or is not functional.
<b>Recommended Response Action</b>	Ensure that the following is correct: Input power source is connected to the PSU. Power is within the operating requirements of PSU. Cables are properly connected. If the issue persists, manually reseal and/or swap the PSUs.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	Power input for PSU <number> is lost. Check PSU cables
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The power input for power supply arg1 is outside of range.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	The operating requirements for the power supply may be found in product documentation or on the power supply itself.

<b>Recommended Response Action</b>	Verify the input source is attached to the power supply. Verify the input power is within the operating requirements for the power supply.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	Power input for PSU <number> is outside of range. Check PSU cables
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The power input for power supply arg1 is outside of the allowable range, but it is attached to the system.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	The operating requirements for the power supply may be found in product documentation or on the power supply itself.
<b>Recommended Response Action</b>	Verify the input power is within the operating requirements for the power supply.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2186
<b>LCD Message</b>	PSU <number>'s power input is outside of the allowable range.
<b>OMSA Event ID</b>	5353
<b>OMSA Trap ID</b>	5353
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power supply arg1 is incorrectly configured.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	The power supply identified in the message must be supported by the platform. Generally, multiple power supplies in the server should have the same feature set and power rating.
<b>Recommended Response Action</b>	Review server product documentation for supported power supplies and power supply configurations.

<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	Power supply <number> is incorrectly configured. Check PSU.
<b>OMSA Event ID</b>	5354
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power supply arg1 is operating at 110 volts, and could cause a circuit breaker fault.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	A power supply that is designed to operate at 220V, but is connected to a 110V power source requires additional current for operation. The additional current may trip circuit-breakers or cause other electrical issues with the input source.
<b>Recommended Response Action</b>	Check input power source and cabling. Use recommended input power. Review the product documentation. If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Warning
<b>LCD Message</b>	PSU <number> at 110 volts; could cause a circuit breaker fault.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, LC Log*

## PSU0017

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power supply arg1 is operating normally.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2187
<b>OMSA Event ID</b>	5352

<b>OMSA Trap ID</b>	5352
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0019

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The input power for power supply arg1 has been restored.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2187
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log

## PSU0022

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power supply arg1 is correctly configured.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Informational
<b>Trap/EventID</b>	2187
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PSU0023

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power supply arg1 operating at 110 volts has been acknowledged by user.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, LC Log*

## PSU0031

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Cannot communicate with power supply arg1.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li></ul>
<b>Detailed Description</b>	The power supply may operate, however power supply monitoring will be degraded. System performance may be degraded.
<b>Recommended Response Action</b>	Remove and re-install the power supply. If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	Cannot communicate with PSU <number>. Reseat PSU.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*, Chassis Event Proxy*

## PSU0032

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The temperature for power supply arg1 is in a warning range.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li></ul>
<b>Detailed Description</b>	System performance may be degraded.

<b>Recommended Response Action</b>	Check the system operating environment, including airflow and inlet temperature. Check system logs for temperature and thermal component failures.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2186
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*, Chassis Event Proxy*

## PSU0033

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The temperature for power supply arg1 is outside of range.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	System performance may be degraded.
<b>Recommended Response Action</b>	Check the system operating environment, including airflow and inlet temperature. Check system logs for temperature and thermal component failures.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	PSU <number> temperature outside of range. Check PSU
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*, Chassis Event Proxy*

## PSU0034

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	An under voltage fault detected on power supply arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	This failure may be the result of an electrical issue with cables or subsystem components in the system.
<b>Recommended Response Action</b>	1) Remove and re-install the power supply.2) Check cables and subsystem components in the system for damage. 3) If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	An under voltage fault detected on PSU <number>. Check power source.

<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset

## PSU0036

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	An over current fault detected on power supply arg1.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = number</li> </ul>
<b>Detailed Description</b>	This failure may be the result of an electrical issue with cables or subsystem components in the system.
<b>Recommended Response Action</b>	1) Remove and re-install the power supply.2) Check cables and subsystem components in the system for damage. 3) If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	An over current fault detected on PSU <number>. Check PSU.
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*, Chassis Event Proxy*

## PSU0037

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Fan failure detected on power supply arg1.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = number</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Check for fan blockage. If not replace the power supply.
<b>Category</b>	System Health (PSU = Power Supply)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2185
<b>LCD Message</b>	Fan failure detected on PSU <number>. Check PSU.
<b>Redfish Event Type</b>	Alert

## PSUA—PSU Absent Event Messages

### PSUA0016

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Power supply arg1 is absent.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• arg1 = number</li> </ul>
<b>Detailed Description</b>	The supply has been removed or has failed.
<b>Recommended Response Action</b>	Install the power supply if needed.
<b>Category</b>	System Health (PSUA = PSU Absent)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2465
<b>LCD Message</b>	PSU <number> is absent. Check PSU
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, IPMI Alert*, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log, Power Off, Power Cycle, Reset
<b>Applicable Event or Alert Types</b>	CMC—Filter Visibility, SNMP Alert*, Email Alert*, Remote System Log*, LC Log*

## PWR—Power Usage Event Messages

### PWR0100

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The power button was pressed.
<b>Detailed Description</b>	No detailed description available.

<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0101

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The power button was released.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0102

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The sleep button was pressed.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0103

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The sleep button was released.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0104

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The reset button was pressed.
<b>Detailed Description</b>	The system will reset.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0105

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The reset button was released.
<b>Detailed Description</b>	The system will reset.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0106

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The arg1 is latched.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = name</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0107

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The arg1 is unlatched.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = name</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0108

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The arg1 service was requested.
<b>Arguments</b>	<ul style="list-style-type: none"><li>• arg1 = name</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational

<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0109

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The arg1 service has completed.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>arg1 = name</li> </ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, Remote System Log, Redfish Eventing*, LC Log*
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR0309

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unknown server inserted into chassis.
<b>Detailed Description</b>	Unknown server inserted into chassis.
<b>Recommended Response Action</b>	Acquire the latest Management Module (MM) firmware that supports the server indicated and update it to at least that version.
<b>Category</b>	Audit (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## PWR0310

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Server link tuning error.
<b>Detailed Description</b>	Server link tuning error.
<b>Recommended Response Action</b>	Ensure that the IO Module (IOM) and Mezzanine (Mezz) cards are appropriately matched. Check the Management Module (MM) hardware manual for correct component compatibility.

<b>Category</b>	Audit (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## PWR0311

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Unknown power on response from the MM.
<b>Detailed Description</b>	Unknown power on response from the MM.
<b>Recommended Response Action</b>	Try resetting the Management Module (MM). Also try resetting the server.
<b>Category</b>	Audit (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## PWR0313

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	Server failed to power up due to fabric mismatch.
<b>Detailed Description</b>	Server failed to power up due to fabric mismatch.
<b>Recommended Response Action</b>	Ensure that the hardware compatibility between the IO Module (IOM) and the Mezzanine (Mezz) card is correct. Check the Management Module (MM) hardware manual for correct component compatibility.
<b>Category</b>	Audit (PWR = Power Usage)
<b>Severity</b>	Informational
<b>Redfish Event Type</b>	Not Applicable
<b>Applicable Event or Alert Types</b>	No alerts are applicable for this message

## PWR1000

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system performance restored.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Informational

<b>Trap/EventID</b>	2275
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR1001

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system performance degraded.
<b>Detailed Description</b>	To avoid shutdown, system performance has been degraded.
<b>Recommended Response Action</b>	Review system configuration and power consumption.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2274
<b>LCD Message</b>	System performance degraded. Check PSUs and system configuration
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR1002

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system performance degraded because of thermal protection.
<b>Detailed Description</b>	To avoid shutdown, system performance has been degraded.
<b>Recommended Response Action</b>	Review system configuration and system logs for thermal or environmental failures and warnings.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2274
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR1003

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system performance degraded because cooling capacity has changed.
<b>Detailed Description</b>	To avoid shutdown, system performance has been degraded.
<b>Recommended Response Action</b>	If unintended, review system configuration changes and thermal policy.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2274
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR1004

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system performance degraded because power capacity has changed.
<b>Detailed Description</b>	To avoid shutdown, system performance has been degraded.
<b>Recommended Response Action</b>	If unintended, review system configuration changes and power policy.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2274
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR1005

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system performance degraded because of user-defined power capacity has changed.
<b>Detailed Description</b>	To avoid exceeding the user defined capacity, system performance has been degraded.
<b>Recommended Response Action</b>	If unintended, review system configuration changes and power policy.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2274

<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR1006

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system halted because system power exceeds capacity.
<b>Detailed Description</b>	The system may shutdown.
<b>Recommended Response Action</b>	Review system configuration, upgrade power supplies or reduce system power consumption.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2273
<b>LCD Message</b>	System power exceeds capacity. System halted. Contact support
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR1007

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system performance degraded because power exceeds capacity.
<b>Detailed Description</b>	To avoid shutdown, system performance has been degraded.
<b>Recommended Response Action</b>	Review system configuration, upgrade power supplies or reduce system power consumption.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Warning
<b>Trap/EventID</b>	2274
<b>LCD Message</b>	System power exceeds capacity. Performance degraded. Check PSU configuration
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
<b>Applicable Event or Alert Types</b>	CMC—Not Applicable

## PWR1008

 **NOTE:** Event or Alert types that are enabled by default are identified using an asterisk (\*) symbol in the **Applicable Event or Alert Types** section.

<b>Message</b>	The system performance degraded because power draw exceeds the power threshold.
<b>Detailed Description</b>	To avoid shutdown, system performance has been degraded.
<b>Recommended Response Action</b>	Review system configuration, upgrade power supplies or reduce system power consumption.
<b>Category</b>	System Health (PWR = Power Usage)
<b>Severity</b>	Critical
<b>Trap/EventID</b>	2273
<b>LCD Message</b>	System power exceeds threshold. Performance degraded. Check PSU configuration
<b>Redfish Event Type</b>	Alert
<b>Applicable Event or Alert Types</b>	iDRAC—Filter Visibility, SNMP Alert, Email Alert, Remote System Log, WS Eventing, Redfish Eventing*, LC Log*, OS Log
