

BellBooth

The Bellbooth is the perfect solution for phone calls in modern and open-office spaces.

This entirely enclosed acoustic phone cell is a functional solution that makes it possible to conduct undisturbed phone calls and remain concentrated in open-office spaces.

For offices in which light physical exertion takes place, the guideline is to ventilate the air at a minimum rate of 31m³/hour per person. Our Scrumroom achieves double this recommended rate (60m³/hour per person). There are different ways to experience noise pollution. A (too) high volume alone can already be a nuisance—especially if the sound continues for a while. Your ability to concentrate can also be disrupted by audible conversations in your environment. Our Bellbooth is equipped with acoustic panels. These sound-absorbing panels reduce the effects of reverberation (sound reflection), thereby reducing noise pollution.

The newest phone booth by BakkerElkhuiZEN

Would you like to be able to have quiet, undisturbed and concentrated phone calls? Every knowledge worker has felt the need for a calm and silent environment to concentrate on phoning or skyping. Not all offices and workplace concepts are suitable for this. Lacking privacy and environmental noise are frequently issues. With the Bellbooth, BakkerElkhuiZEN has created a mobile solution enabling you to phone in peace and quiet. The Bellbooth is a unique, easy-to-assemble mobile phone space.

Advantages BellBooth

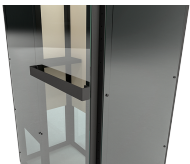

Complete

The BellBooth comes fully equipped, including acoustic panels, LED lighting, safety glass, acoustic ceiling and ventilator.

Create calm

The BellBooth is the ideal solution for long phone conversations. By making use of this solution, you won't be disturbing your colleagues.

Vitality

Good to alternate between a sitting and standing working posture. People move more.

Design

This new kind of workplace has a modern and open design. The use of glass combined with matted steel gives it a sleek, open appearance.

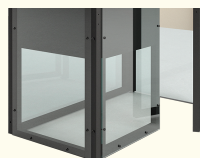

Safety

The BellBooth comes equipped with safety glass and fire-resistant acoustic panels.

Unburdens

We unburden you by arranging the transportation and placement of the BellBooth.

Knowledge Center

You are no exception if you sometimes find it difficult to concentrate on your tasks at work.

Many of us now work in shared open plan spaces with terrible acoustics and limited privacy. Deep concentration can be almost impossible in this
