HP Device Manager 5.0

Highly Scalable Software for HP Thin Clients

Make it easy for your IT admins to remotely deploy, update, and manage thousands of HP Thin Clients from anywhere[1] through a single console with HP Device Manager, a tool included with HP Thin Clients at no extra cost.

Benefits of HP Device Manager 5.0

- Instantly distribute images, add-ons, drivers with just few clicks
- Customizable folder structure to organize the devices by any criteria.
- Automatic device configuration and updates with rules by folder
- Troubleshoot IT issues from a remote location with device shadowing
- Role-based access control and auditing

Device Management Simplified.

Centralize management and monitoring with a simple, powerful admin tool that allows IT to remotely[1] configure, update, and troubleshoot your HP Thin Clients, and even automate certain tasks.

Flexible and intuitive experience.

Enable IT to keep track of what's important with a tool that sets up in minutes, Customize the interface with easy drag-and-drop support for multiple displays. Use the web-based console[1] for quick access or role-based task delegation from anywhere.

Powerful console built for scale.

Operate across larger deployments with support for 64-bit applications and scalable memory, performance, and reliability

HP Device Manager 5.0

Specifications	
Supported Platforms	Microsoft Windows Server 2008 R2, 2012, 2016 For DM console only (not including web console) – Windows 7, Windows 10 1709
Supported Thin Client Operating Systems	Windows Embedded Standard 7 Windows 10 IoT Enterprise HP ThinPro HP SmartZero

Software Components	
HP Device Manager Console	User interface console that allows system administrators to view details for each controlled device, organize device trees, create and maintain remote job definitions, and monitor tasks sent out to devices.
HP Device Manager Server	Tasks, stored as Templates on the server, can be sent to each agent through each agent's respective gateway to perform commands as required. Device Manager requires a DBMS (PostgreSQL that comes built-in or, MS-SQL 2014, 2016, 2017).
HP Device Manager Gateway	The link between devices and the Device Manager server. Devices register with the gateway when they are started. The system installed with the gateway also normally contains the PXE Server installed by the HP Device Manager.
Devices	The agent software component is installed on thin clients so that HP Device Manager can interact with them. These agents are embedded into each HP thin client operating system to enable Device Manager to manage them out-of-the-box, receiving task commands, executing them, and reporting on their status.
FTP Server	Repository of components, images, etc. that can be uploaded from or downloaded to the agents at the request of the server. Supported file servers: IIS, SMB (Windows Server 2016), HTTPS, SFTP, FileZilla

[1]Internet access required and sold separately.
