|          | The words "Original instructions" appear on the language version(s) verified by the manufacturer or by the authorized representative  |                    | N/A     |
|          | When a translation of the original instructions has<br>been provided by a person introducing the<br>appliance on the market; the meaning of the<br>sentence "Translation of the original instructions"<br>appear in the relevant instructions delivered with<br>the appliance                             |                    | N/A     |
|          | The instructions for maintenance/service to be<br>done by specialized personnel, mandated by the<br>manufacturer or the authorized representative may<br>be supplied in only one Community language<br>which the specialized personnel understand   |                    | N/A     |
|          | The instructions indicate the type and frequency of inspections and maintenance required for safe operation including the preventive maintenance measures   |                    | N/A     |
| 7.12.ZE1 | If needed for specific appliances, the following inform   | ation to be given: | N/A     |
|          | - on use, transportation, assembly,<br>dismantling when out of service, testing or<br>foreseeable breakdowns, if these operations<br>have consequences on stability of the<br>appliance in order to avoid overturning, falling<br>or uncontrolled movements of the appliance<br>or of its component parts |                    | N/A     |
|          | - on how to maintain adequate mechanical<br>stability when in use, during transportation,<br>assembly, dismantling, scrapping and any<br>other action involving the appliance   |                    | N/A     |
|          | - on the protective measures to be taken by<br>the user, including, where appropriate, the<br>personal protective equipment to be provided  |                    | N/A     |
|          | <ul> <li>on the operating method to be followed in<br/>the event of accident or breakdown; if a<br/>blockage is likely to occur the operating<br/>method to safely unblock the appliance</li> </ul>   |                    | N/A     |
|          | - on the specifications on the spare parts to<br>be used, when these affect the health and<br>safety of the operator  |                    | N/A     |

|           | IEC 60335_1T ATTACHMEN   | NT                          |         |
|-----------|--|-----------------------------|---------|
| Clause    | Requirement + Test   | Result - Remark             | Verdict |
|           | - on airborne noise emissions, determined and the relevant Part 2, which includes:   | declared in accordance with | N/A     |
|           | - the A-weighted emission sound pressure<br>level at workstations, where this exceeds<br>70 dB(A);   |                             | N/A     |
|           | - where this level does not exceed 70 dB(A), this fact is indicated  |                             | N/A     |
|           | - the peak C-weighted instantaneous<br>sound pressure value at workstations,<br>where this exceeds 63 Pa (130 dB in<br>relation to 20 μPa)   |                             | N/A     |
|           | - the A-weighted sound power level emitted<br>by the machinery, where the A-weighted<br>emission sound pressure level at<br>workstations exceeds 80 dB(A)  |                             | N/A     |
| 7.12.ZE2  | The instructions include a warning to disconnect<br>the appliance from its power source during service<br>and when replacing parts   |                             | N/A     |
|           | If the removal of the plug is foreseen, it is clearly<br>indicated that the removal of the plug has to be<br>such that an operator can check from any of the<br>points to which he has access that the plug<br>remains removed |                             | N/A     |
|           | If this is not possible, due to the construction of the<br>appliance or its installation, a disconnection with a<br>locking system in the isolated position is provided  |                             | N/A     |
| 19.11.4.8 | The appliance continues to operate, without<br>causing any hazard to the user, from the same<br>point in its operating cycle at which the voltage<br>fluctuation occurred, or  |                             | N/A     |
|           | a manual operation is required to restart it   |                             | N/A     |
| 20.1      | Appliances and their components and fittings have<br>adequate mechanical stability during<br>transportation, assembly, dismantling and any<br>other action involving the appliance   |                             | N/A     |
| 20.2      | Dangerous moving transmission parts safeguarded either by design or guards   |                             | N/A     |
|           | When guards are used, they are fixed guards, interlocking movable guards or protective devices   |                             | N/A     |
|           | Moving parts directly involved in the function of the a made completely inaccessible fitted with:  | appliance which cannot be   | N/A     |
|           | - fixed guards or interlocking movable guards<br>preventing access to those sections of the parts<br>that are not used in the work, and  |                             | N/A     |
|           | - adjustable guards restricting access to those sections of the moving parts where access is necessary   |                             | N/A     |

|         | IEC 60335_1T ATTACHME  |                 |         |
|---------|--|-----------------|---------|
| Clause  | Requirement + Test   | Result - Remark | Verdict |
|         | Interlocking movable guards used where frequent access is required   |                 | N/A     |
| 21.1    | Appliances and their components and fittings have<br>adequate mechanical strength and is constructed<br>to withstand such rough handling that may be<br>expected in normal use, during transportation,<br>assembly, dismantling, scrapping and any other<br>action involving the appliance |                 | N/A     |
| 22.ZE.1 | For appliances provided with a seat, the seat gives adequate stability   |                 | N/A     |
|         | The distance between the seat and the control devices capable of being adapted to the operator   |                 | N/A     |
| 22.ZE.2 | For appliances provided with separate devices for<br>the start and the stop functions, the stop function<br>is unambiguously identifiable and does always<br>override the start function   |                 | N/A     |
|         | For appliances provided with one device<br>performing the start and the stop function, the stop<br>function is unambiguously identifiable and does<br>always override the start function   |                 | N/A     |
| 22.ZE.3 | Appliances designed in such a way that incorrect<br>mounting is avoided, if this can lead to an unsafe<br>situation  |                 | N/A     |
|         | If this is not possible, information on the correct<br>mounting is given directly on the part and/or the<br>enclosure  |                 | N/A     |
| 22.ZE.4 | Where the weight, size or shape prevents<br>appliances from being moved manually, they are<br>fitted with attachments for lifting gear, or   |                 | N/A     |
|         | so designed that they can be fitted with such attachments, or  |                 | N/A     |
|         | be shaped in such a way that standard lifting gear can easily be used  |                 | N/A     |
|         | Appliances to be moved manually are constructed<br>or equipped so that they can be moved easily and<br>safely  |                 | N/A     |
| 22.ZE.5 | The fixing systems of fixed guards which prevent<br>access to dangerous moving transmission parts<br>only removable with the use of tools  |                 | N/A     |
|         | If such guards have to be removed by the user for<br>routine cleaning or maintenance their fixing<br>systems remain attached to the fixed guards or to<br>the machine after removal  |                 | N/A     |
|         | Where possible, guards are incapable of remaining in place without their fixings   |                 | N/A     |
|         | This does not apply if, after removal of the screws,<br>or if the component is incorrectly repositioned, the<br>appliance becomes inoperative  |                 | N/A     |

|         | IEC 60335_1T ATTACHMENT  | 17      |
|---------|--|---------|
| Clause  | Requirement + Test Result - Remark   | Verdict |
|         | Movable guards are interlocked   | N/A     |
|         | The interlocking devices prevent the start of<br>hazardous appliance functions until the guards are<br>fixed in their position, and give a stop command<br>whenever they are no longer closed  | N/A     |
|         | Where it is possible for an operator to reach the danger zone before the risk due to hazardous appliance functions has ceased, movable guards associated with a guard locking device in addition to an interlocking device that:                             | N/A     |
|         | - prevents the start of hazardous appliance functions until the guard is closed and locked, and  | N/A     |
|         | - keeps the guard closed and locked until the risk<br>of injury from the hazardous appliance functions<br>has ceased   | N/A     |
|         | Interlocking movable guards remain attached to the appliance when open, and  | N/A     |
|         | they are designed and constructed in such a way<br>that they can be adjusted only by means of an<br>intentional action   | N/A     |
| 22.ZE.6 | Interlocking movable guards designed in such a<br>way that the absence or failure of one of their<br>components prevents starting or stops the<br>hazardous appliance functions  | N/A     |
|         | The guard is opened to the extent needed to cause the interlocking to operate and is then closed, the number of operations being defined in the specific Part 2  | N/A     |
|         | After this test any defect that may be expected in<br>normal use is applied to the interlock system,<br>including interruption of the supply, only one defect<br>being simulated at a time   | N/A     |
|         | After these tests the interlock system is fit for further use  | N/A     |
| 22.ZE.7 | Adjustable guards restricting access to areas of the moving parts strictly necessary for the work are:   | / N/A   |
|         | - adjustable manually or automatically, depending on the type of work involved, and  | N/A     |
|         | - readily adjustable without the use of tools  | N/A     |
| 22.ZE.8 | In case of interruption, re-establishment after an interruption or fluctuation in whatever manner of the power supply, the appliance does not restart  | N/A     |
|         | However, automatic restarting of the operation is<br>allowed if the appliance may continue to operate,<br>without causing any hazard to the user, from the<br>same point in its operating cycle at which the<br>voltage interruption or fluctuation occurred | N/A     |
| 22.ZE.9 | Appliances fitted with means to isolate them from all energy sources   | N/A     |
|         |  |         |
