4. Click on 'Add' to add a joystick.
5. Select '2 axis, 4-button joystick'.
6. Click the 'Properties' button.
7. Click the 'Calibrate' button. Follow the instructions on the screen.
8. To test your joystick, select the tab 'Test'. Follow the instructions on your screen.
9. Trust Predator XK 100 is ready for use.

2.2 Windows 3.1x/DOS

The joystick does not have to be installed in Windows 3.1x and DOS. Calibration must then often be carried out in the game. If necesssary, Consult the game's manual to do this.

Note: *Some games support only two fire buttons instead of four.*

3. Fire buttons

Buttons 1 to 4 are fire buttons that work independently of each other. Switch A is used to activate and deactivate the rapid-fire function of fire buttons 1 and 2.
