## Arm's length payment solutions

### A solution for today's payment transactions

The number of applications where separation between the customer and the operator is now seen as best practice, is increasing. With a customer led requirement in both the retail and hospitality sectors for click & collect, in-store fulfilment, kerbside deliveries, and QSR drive-thrus, providing a safe arm's length payment option at the point of collection or delivery helps create a sense of wellbeing.

#### Applications

- Hygienic and secure arm's length payments
- Ideal for drive-thru, kerbside pickups and home-delivery
- Traditional POS environments to encourage social distancing

#### Benefits

- Arms-length payments for personal wellbeing
- Hygienic easy clean handle
- Antimicrobial powder coating
- Lightweight aluminium construction
- Enhanced cable management for the widest range of payment terminals
- Rubber grommet for protecting counter when not in use
- Secure PIN entry for customer

SpacePole Payment Paddle brings a new level of hygiene to payment transactions where physical distance between operator and customer occurs within the workplace environment. It removes the need to physically hand a payment terminal to the customer, which is slow, unhygienic and risks damaged terminals and cables and an enhanced risk of theft.

This solution enables a payment terminal device to be attached to one end of an ergonomic handle. It has been specifically designed with hygiene in mind. Especially important for the fast-food/QSR sector, the paddle has a knurled aluminium handle and cable strips allowing SpacePole Paddle to be washed and treated with cleaning fluid on a regular basis. Added protection Supplied as standard, the finished product comes with added protection through the application of an IGP-DURA®care antimicrobial powder coating. This prevents the growth of bacteria and fungi, and prevents strong germ growth between cleaning cycles, guaranteeing low bacterial attack. Enhanced cable management and a re-positioned fixing plate for our MultiGrip™ payment terminal adaptors means that SpacePole Paddle is compatible with the widest range of payment devices from the leading manufacturers. This includes those with 90-degree cable plugs, and those of a larger form factor.
