

CORE SCALABLE Server Series

Massive Power

The CORE scalable series is a powerful video surveillance server range with support for up to (2) Intel® Xeon® Scalable processors, which ensures computing performance. The servers are optimized to work with CCTV recording Software for sensitive & long-term storage of hundreds of IP/Megapixel cameras.

Optimized For Surveillance

The CORE range is engineered to fit the requirements we have in the video surveillance industry. It is engineered to optimize the way the processor, memory, graphics, OS and software technology work together to deliver massive recording power, but also to fit the VMS software, the physical dimensions of the servers are in several form factors.

Tuned And Tested

All systems have been hardware tested for 24 hours, and tuned with many unique systems settings before leaving the production line, to make sure that the server will run 24 hours per day. Year after year.

Battery Backed 12Gbps Raid Controller

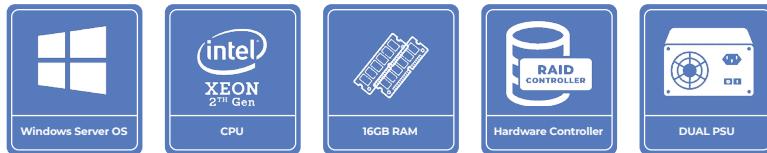

It is equipped with an 8 channel 12Gbps hardware RAID controller, the controller is also including battery back up (BBU) to insure data loss in case of power failure.

Storage & Power Supplies

Video storage options are available with up to (36) 3.5" enterprise SAS/SATA drives and support of RAID for data protection and optimized performance. Dual power supplies provides proper power resources and redundancy.
