Installation Guide

WiFi 6 AX1800 Dual Band Access Point WAX202

Package contents

- NETGEAR WAX202 WiFi access point
- DC power adapter (varies by region)
- Ethernet cable
- Installation guide

Start here: What WiFi setup do you want?

	What you have	What you want	Operation mode	Follow
Α	Broadband/cable/DSL device with WiFi (router)	Add WiFi 6 to your home or office.	Change to access point mode	Steps 1A, 2, 3, and 4
	Broadband/cable/DSL device without WiFi (modem only)	Add WiFi 6 and a wired network to your home or office.	Keep default router mode	Steps 1A, 2, and 3 only
В	Ethernet wall outlet with Internet service	Set up a WiFi 6 hotspot on an existing network.	Change to access point mode	Steps 1B, 2, 3, and 4
		Set up a private WiFi 6 network.	Keep default router mode	Steps 1B, 2, and 3 only

Step 1. Connect the WAX202

Follow the steps for the setup that you want.

A. You have a broadband/cable/DSL device

- Unplug the power of the broadband, cable, or DSL device, but leave the device connected to the wall jack for your Internet service. If the device uses a battery backup, remove the battery.
- Connect the Ethernet cable to the yellow WAN port on the WAX202.
- Connect the other end of the cable to a LAN port on your broadband, cable, or DSL device.

B. You have an Ethernet wall outlet with Internet service

Ethernet outlet with Internet service

- WAX202.

Step 2. Join the WAX202's WiFi network

4. If the broadband, cable, or DSL device uses a battery backup, put the battery back in. Plug in and turn on the device.

5. Power on the WAX202 and check that the LEDs are lit.

Connect an Ethernet cable from the wall outlet to the yellow WAN port on the

Power on the WAX202 and check that the LEDs are lit.

On the WiFi-enabled computer that you want to connect to the WAX202, open the software utility that manages the WiFi connections.

This utility scans for all WiFi networks in your area.

Find and select the WAX202's WiFi network name (SSID), which is printed on the access point's label, and connect to the WAX202's WiFi network.

3. Type the WiFi password that is printed on the access point's label.

Step 3. Log in to the WAX202

Launch a web browser and type **http://www.routerlogin.net** in the address field. Your browser might display a security warning, which you can dismiss. For more information on how to dismiss a browser security warning, see https://kb.netgear.com/000062980.

The Setup Wizard starts.

- 2. Follow the prompts onscreen to do the following:
 - a. Set a new admin password (local device password) for local login, and set security questions and answers.
 - b. As an option for greater security, you can set a new WiFi network name (SSID) and WiFi password.
 - c. If you set a new SSID and WiFi password and your WiFi connection is terminated, reconnect to the WAX202 using your new SSID and WiFi password to complete the setup process.
 - d. If a new firmware version is available, follow the prompts to update the firmware.

When the setup process is complete, your browser might again display a security warning, which you can dismiss.

The local device login page displays.

If the page does not display, type **http://www.routerlogin.net** in the address field of your browser.

Note: If you cannot connect to the WAX202, see the user manual for more detailed instructions. Download the user manual by visiting netgear.com/support/download.

3. Enter your local device password.

The BASIC Home page displays.

- 4. If you are using the WAX202 in a country other than the U.S. or Canada, set the country or region where you are using the WAX202:
 - Select Advanced > Advanced Setup > Wireless Settings.
 - b. From the **Region** menu, select the country or region where you are using the WAX202

Note: Make sure that the country is set to the location where the device is operating. You are responsible for complying with the local, regional, and national regulations for channels, power levels, and frequency ranges.

Continued on the next page

201-28033-01

c. Click the **Apply** button.

Your settings are saved and the WAX202 is configured for the new country or region.

- d. If your WiFi connection is terminated, reconnect to the WAX202.
- 5. As an option, configure the WAX202 settings for your environment and security requirements.

The WAX202 supports multiple WiFi and security settings. For more information about the configuration options, see the user manual.

- 6. Identify if your broadband/cable/DSL device is a router or a modem:
 - **Broadband/cable/DSL device with WiFi**: The device is a router. Follow *Step 4. Change to access point mode.*
 - **Broadband/cable/DSL device without WiFi**: The device is most likely a modem. Keep the WAX202 in its default router mode. The WAX202 is now ready to use.

Step 4. Change to access point mode

By default, the WAX202 starts up in router mode. After you set up the WAX202, you must change the WAX202 operation mode to access point mode (to disable the router features) for the following network setups:

- **Broadband/cable/DSL device with WiFi**. Your broadband, cable, or DSL device already provides WiFi (it is a router), but you want to use the WAX202 to add WiFi 6 to your network.
- **Ethernet wall outlet with Internet service**. You want to set up a WiFi 6 hotspot on an existing network.
- 1. If you are not yet logged in to the WAX202 local browser user interface (UI), do the following:
 - a. Launch a web browser from a WiFi-enabled computer that is connected to the WAX202's WiFi network.
 - b. Type http://www.routerlogin.net in the address field.

A login window displays.

Your browser might display a security warning, which you can dismiss. For more information on how to dismiss a browser security warning, see *https://kb.netgear.com/000062980*.

c. Enter the local device password.

The local device password is the one that you specified the first time that you logged in to the WAX202. The local device password is case-sensitive.

The BASIC Home page displays.

- Select ADVANCED > Advanced Setup > Router / AP / Bridge Mode. The Router / AP / Bridge Mode page displays.
- 3. Select the **AP Mode** radio button.
- 4. Click the Apply button.

Your settings are saved and the WAX202 is reconfigured in access point mode. The WAX202 receives a new IP address that is assigned by your existing broadband, cable, or DSL device or existing router.

- 5. To connect to the local browser UI again, do the following:
 - a. Reconnect to the WAX202's WiFi network.
 - b. Close and reopen your browser.
 - c. Type http://www.routerlogin.net in the address field.
